SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- . . Figures not available.
- . . . Figures not appropriate or not applicable.
- Nil or zero.
- - Amount too small to be expressed.
- p Preliminary figures.
- r Revised figures.
- x Confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- . . Nombres indisponibles.
- . . . N'ayant pas lieu de figurer.
- Néant ou zéro.
- - Nombres infimes.
- p Nombres provisoires.
- r Nombres rectifiés.
- x Confidentiels en vertu des dispositions de la Loi sur la Statistique relatives au secret.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry selling price index: Manufacturing
(1961=100)

The industry selling price index for Manufacturing rose 1.2% in July to 142.7 from the June index level of 141.0. It was 12.0% higher than the July 1972 index of 127.4. Of the 101 industry indexes included in the Total, 56 were higher, 12 declined and 33 were unchanged.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in the foods and beverages group, particularly in the slaughtering and meat packing industries (4.0%) and the feed manufacturers (+ 7.1%). Increases also occurred in the primary metals group largely reflecting higher prices registered in the smelting and refining industries. Price increases recorded in the pulp and paper industry were mainly responsible for advances in the paper and allied products group. Declines were relatively insignificant with the exception of the wood products group, where lower prices were reported in the sawmills and planing mills industry.

NOTES SUR LES PRIX ET LES INDICES DE PRIX

Indice des prix de vente dans l'industrie: Industries
manufacturières (1961=100)

L'indice des prix de vente dans l'industrie pour les industries manufacturières a augmenté de 1.2%, passant de 141.0 en juin à 142.7 en juillet. Il était de 12.0% supérieur à l'indice de juillet 1972 (127.4). Sur les 101 industries comprises dans ce total, les indices ont augmenté dans 56 industries, ils ont baissé dans 12 et n'ont pas varié dans 33.

Pour ce qui est de l'importance relative de chaque industrie au sein des industries manufacturières, les variations les plus importantes ont été les augmentations du groupe des aliments et boissons, en particulier des éléments abattage et conditionnement de la viande (+ 4.0%) et fabrication d'aliments pour animaux (+ 7.1%). Le groupe de la première transformation des métaux a également progressé, surtout en raison d'une hausse des prix pratiqués par l'industrie de la fonte et de l'affinage. Les augmentations des prix dans l'industrie des pâtes et papiers sont en grande partie responsables de la progression du groupe du papier et produits connexes. Les diminutions enregistrées ont été relativement peu importantes à l'exception du groupe des produits du bois, des prix plus bas ayant été déclarés dans les scieries.

General Wholesale Price Index (1935-39=100)

The general wholesale price index rose 2.3% in July to 375.2 from the revised June index of 366.8. It was 21.9 higher than the July 1972 index of 307.9. Seven major group indexes were higher while one declined.

The animal products group index rose 4.1% in July to 456.2 from the revised June index of 438.3 on higher prices for livestock, fresh meats, cured meats, leather, boots and shoes, hides and skins and eggs. An advance of 3.7% to 349.1 from 336.5 in the vegetable products group index reflected price increases for grains, milled cereal foods, vegetable oils and their products, livestock and poultry feeds, potatoes and rubber and its products. Higher prices for tin, silver, copper and sodder were responsible for a rise of 3.6% to 327.2 from 315.9 in the non-ferrous metals group index. The textile products group index moved 2.1% higher to 332.0 from 325.3 on higher prices for cotton yarns, cotton knit goods, silk and nylon thread and yarns, raw wool and raw cotton. An increase of 2.0% to 262.0 from 256.9 occurred in the Chemical products group index on price increases for coal tar, paint and paint materials and soap and detergents. Fractionnally higher prices were recorded in the iron products group index to 356.9 from 353.0, and in the non-metallic mineral group index to 251.2 from 249.6. The wood products group index declined 0.2% to 502.8 from 503.6.

The General Wholesale Index, which advanced 21.9% from July 1972, contains relatively few final product price indexes for commodities such as consumer durable goods, whose prices have changed little during the past year. The Industry Selling Price Index for Manufacturing, which advanced 12.0% during the same period, does include such products.

The following table lists the Total Index and component groupings for specified dates:

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a progressé de 2.3% en juillet, passant de 366.8 en juin indice rectifié à 375.2; ce qui représente une hausse de 21.9% par rapport à l'indice de juillet 1972 (307.9). Les indices de sept principaux groupes ont augmenté et l'indice d'un groupe a diminué.

L'indice du groupe des produits d'origine animale, augmenté de 4.1% passant de 438.3 en juin à 456.2 en juillet à suite de la hausse du prix du bétail, de la viande fraîche, de la viande salée et fumée, du cuir, des chaussures et des bottes, des peaux et des oeufs. L'indice du groupe des produits d'origine végétale est passé de 336.5 à 349.1 (+ 3.7%) en raison de l'augmentation du prix des céréales, des aliments à base de céréales moulues, des huiles végétales et de leurs produits, des aliments pour bétail et pour volaille, des pommes de terre, du caoutchouc et de ses produits. L'augmentation des prix de l'argent, du cuivre et des soudures est responsable de la hausse de 3.6% de l'indice du groupe des métaux non-ferreux qui est passé de 315.9 à 327.2. L'indice des matières textiles a avancé de 2.1% passant de 325.3 à 332.0 en raison de l'augmentation du prix des filés de coton, des tricots de coton, des fils et des filés de soie et de nylon, de la laine et du coton bruts. L'indice des produits chimiques a avancé de 2.0%, passant de 256.9 à 262.0 en raison de l'augmentation des prix du goudron et charbon, de la peinture, du matériel de peinture et des savons et détergents. On a enregistré des prix légèrement plus élevés dans le groupe des produits du fer (l'indice est passé de 353.0 à 356.9) et dans le groupe des minéraux non métalliques (l'indice est monté de 249.6 à 251.2). L'indice du groupe des produits du bois a diminué de 0.2% passant de 503.6 à 502.8.

L'indice générale des prix de gros, qui a avancé de 21.9% depuis juillet 1972, ne comprend que relativement peu d'indices de produits finis (des biens de consommation durables, par exemple). Ces produits (dont le prix n'a d'ailleurs que peu varié au cours de la dernière année) sont compris dans l'indice des prix de vente dans l'industrie (industries manufacturières) qui a avancé de 12.0% au cours de la même période.

Le tableau ci-dessous présente l'indice générale et les indices des éléments pour des dates déterminées:

	July*	June*	July	June	% Change	
					July - Juill.	July

*These indexes are preliminary. - Ces indices sont provisoires.

Security Price Indexes (1961=100)

The investors' index of common stocks moved up 0.4% to 184.0 between June and July; this is the second monthly increase in 1973, the first one being the all-time high in January (194.5). Industrials and finance increased 4.2% and 1.3% respectively to 198.0 and 173.9, while utilities decreased by 2.1% to 143.2. Amongst the thirteen industrial groups, ten indexes were higher, the strongest increases being 6.7% to 329.2 for petroleum, and 6.5% to 134.1 for industrial mines. Losses were ranging from 4.3% for retail (158.6) to 0.1% for chemicals (103.7). In the utilities group, all sub-groups declined. The increase in the general index is the result of a gain in both sub-groups: stocks advanced 1.6% to 204.6, and investment and loans added up 0.6% to 126.2.

In the same period, the index of mining securities increased by 7.0% to 143.1, following a 5.5% increase for gold, to 187.2, and a gain of 8.1 to 120.2 for base metals.

Of the two supplementary price indexes, uranium advanced 10.6% to 242.7, and primary oil and gas increased by 9.0% to 426.9.

The preferred stock index moved up 0.4% to 71.5.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at term markets advanced 3.2% to 380.5 in July from the revised index of 368.6. An increase of 3.5% to 500.0 from 483.3 for animal products index reflected higher prices for hogs, pigs, eggs, raw wool and calves on both Eastern and Western markets, and for poultry and steers in the East. Higher prices were shown for butterfat in the East and for milk in the West. The field products index rose 2.8% to 261.0 from 253.9 on higher prices for rye and potatoes on both Eastern and for corn, barley and oats in the East and for flax in the West. Lower prices were shown for hay in the East.

Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, advanced 6.4% to 394.8 in July from the revised June index of 371.2. Prices were higher for sixteen commodities, lower for two and unchanged for twelve. Principal changes included increases for seed oil, raw rubber, bleached sulphite pulp, hogs, seed oil, tin, raw wool, oats, raw cotton, domestic steel, rosin, steel sheets, steel scrap, steers, beef hides and piggar.

Indice du cours des valeurs immobilières (1961=100)

L'indice des cours de placement des actions ordinaires a avancé de 2.9% entre juin et juillet pour s'établir à 184.0: il s'agit de la deuxième hausse mensuelle enregistrée en 1973, la première étant le record absolu de janvier (194.5). Les industrielles et les finances ont progressé de 4.2% et 1.3% pour s'établir à 198.0 et 173.9 respectivement tandis que les services publics accusaient une baisse de 2.1% à 143.2. Parmi les treize sous-groupes des valeurs industrielles, dix indices ont enregistré des augmentations, les plus fortes étant de 6.7% dans le sous-groupe du pétrole (329.2) et 6.5% dans le sous-groupe des mines industrielles (134.1); quant aux pertes elles vont de 4.3% pour le commerce de détail (158.6) à 0.1% pour les produits chimiques (103.7). En ce qui concerne les principaux groupes des services publics, tous les sous-groupes ont accusé une baisse sans exception. L'augmentation de l'indice des finances est attribuable à un gain dans les deux sous-groupes: les banques ont augmenté de 1.6% pour atteindre 204.6, les placements et les prêts ont progressé de 0.6% pour se fixer à 126.2.

Au cours de la même période, l'indice du cours des titres miniers a augmenté de 7.0% pour s'établir à 143.1 à la suite d'une augmentation de 5.5% des aurifères qui s'inscrivent à 187.2 et à un gain de 8.1 dans les métaux communs qui se sont fixés à 120.2.

Pour ce qui est des deux indices des prix supplémentaires on a observé une hausse de 10.6% dans le cas de l'uranium qui s'est fixé à 242.7 et le pétrole et les gaz primaires se sont accrus de 9.0% pour atteindre 426.9.

L'indice des actions privilégiées a augmenté de 0.4% pour atteindre 71.5.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 3.2%, passant de 368.6 (indice révisé) en juin à 380.5 en juillet. Une hausse de 3.5% de l'indice des produits d'origine animale, qui passe de 483.3 à 500.0, est imputable à un accroissement du prix des porcs, des agneaux, des oeufs, de la laine brute et des veaux dans l'Est et dans l'Ouest, et à une progression du prix de la volaille et des bouvillons dans l'Est. Le prix du gras de beurre a baissé sur les marchés de l'Est, et le prix des bouvillons a baissé sur les marchés de l'Ouest. L'indice des produits de grande culture s'est accru de 2.8%, passant de 253.9 à 261.0, à la suite d'une majoration du prix du seigle et des pommes de terre dans l'Est et dans l'Ouest, d'une hausse du prix de maïs, de l'orge et de l'avoine dans l'Est, et du lin dans l'Ouest. Le prix du foin a baissé dans l'Est.

Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, s'est accru de 6.4%, passant de 371.2 (indice révisé) en juin à 394.8 en juillet. Les prix de dix-sept marchandises ont progressé, ils ont baissé pour deux marchandises, et ils sont restés inchangés dans le cas de douze autres. Les principales variations comprenaient une hausse du prix de l'huile de lin, du caoutchouc brut, de la pâte de bois blanchie au sulfite, des porcs, de l'huile de graines de coton, de l'étain, de la laine brute, de l'avoine, du coton brut, du blé canadien, de la résine, des feuilles et des déchets d'acier, des bouvillons, des peaux de boeuf et du sucre brut.

Consumer Price Movements

The Consumer Price Index for Canada (1961 = 100) rose 0.9% to 151.0 in July from 149.7 in June. Although most major components moved up, the impetus behind the latest month's advance was largely attributable to increases in the Food and in the Housing elements, which went up 1.9% and 0.5%, respectively. Between June and July, the level of prices for All-Items other than Food was 0.5% higher. The component for Recreation, Education and Reading rose 2.0% and that for Transportation increased 0.4%. The Clothing index edged up 0.1%, while no change was recorded in the elements for Tobacco and Alcohol and for Health and Personal Care. Between July 1972 and July 1973, the All-Items Index advanced 7.7%.

The Food index rose 1.9% to 163.5 in July from 160.5 in June as the level of prices for food eaten away from home rose by 0.5% while that of food for home consumption advanced 2.2%. Higher prices for fresh produce, beef, pork, poultry and eggs were major contributors to the latest monthly index advance. Fruit and vegetable prices registered a 5.9% rise between June and July, with fresh vegetables advancing by 11.8% and fresh fruit by 3.1%. Over the past twelve months, the indexes for fresh vegetables and fresh fruit have climbed over 48% and 33%, respectively. The meat, poultry and fish index advanced 2.6% in the latest month, with retail price levels for beef and pork in early July being 3.0% and 2.3% higher, respectively, than a month earlier. Poultry prices rose 3.4% over the same period. In the twelve months since July 1972, beef prices rose, on average, by more than 21%, the retail price of pork climbed by almost 18%, and poultry quotations advanced nearly 29%. Between June and July, egg prices rose 4.2% to stand over 37% above their level of a year previous. The cereal and bakery products index increased 0.4% in the latest month, prices of dairy products edged up, on average, by 0.1% and the index for fats and oils rose 0.2%. In the twelve months since July 1972, the Food index advanced 14.7% with the price of food consumed at home rising 15.6% and that for food away from home 10.4%.

The Housing index advanced 0.5% to 152.8 in July from 152.1 in June. This increase, typical of the June to July movement of recent years, resulted from advances in both the shelter and household operation components. Within shelter, the homeownership element moved up 0.7% as a result of increases in the indexes for new houses, mortgage interest and homeowner repairs; rents rose 0.2%. Among items of household operation, electricity rates rose in some centres. Furniture prices advanced, on average, 0.4% following scattered price increases for living-room and dining-room furniture. Other home furnishings recording advances were linen and draperies, floor coverings and tableware. The index for household services rose 1.2% following increased telephone charges in Quebec and Ontario cities and higher wages for household help in many centres across the country. Prices of household supply items advanced, on average, 0.4%. In the twelve months to July 1973, the Housing index rose 6.6%.

Mouvements des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961 = 100) est passé de 149.7 en juin à 151.0 en juillet, ce qui représente une augmentation de 0.9%. Bien que la plupart des principaux éléments aient avancé, l'augmentation du mois dernier est en majeure partie attribuable à la hausse de 1.9% de l'indice des aliments et de 0.5% de l'indice de l'habitation. De juin à juillet, le niveau des prix de l'ensemble des articles sauf aliments a augmenté de 0.5%. L'indice des loisirs, de la formation et de la lecture a avancé de 2.0% et celui des transports, de 0.4%. L'indice de l'habillement n'a augmenté que de 0.1%; l'indice des tabacs et alcools et celui de l'hygiène et des soins personnels sont demeurés stationnaires. De juillet 1972 à juillet 1973, l'indice d'ensemble a avancé de 7.7%.

L'indice des aliments est passé de 160.5 en juin à 163.5 en juillet; cette augmentation de 1.9% est composée d'une hausse de 0.5% des repas pris à l'extérieur, et de 2.2% des aliments consommés à la maison. Le principal facteur de cette avance est l'augmentation du prix des fruits et légumes frais, du bœuf, du porc, de la volaille et des oeufs. Le prix des fruits et des légumes frais a avancé de 5.9%, celui des légumes frais de 11.8% et celui des fruits frais de 3.1%. Au cours des 12 derniers mois, l'indice des légumes frais a grimpé de 48%, et celui des fruits frais de 33%. En juillet, l'indice de la viande, de la volaille et du poisson a avancé de 2.6%; début juillet, le prix au détail du bœuf et du porc a respectivement augmenté de 3.0% et 2.3% par rapport à juin. Au cours de la même période, le prix de la volaille a avancé de 3.4%. Au cours des 12 derniers mois, le prix du bœuf a augmenté de 21%, celui de porc, de près de 18%, et celui de la volaille de près de 29%. De juin à juillet le prix des oeufs a augmenté de 4.2% pour atteindre un niveau de 37% supérieur à celui de l'an dernier. En juillet, l'indice des céréales et des produits de boulangerie a augmenté de 0.4%; le prix des produits laitiers n'a augmenté, en moyenne, que de 0.1%. L'indice des huiles et corps gras a subi une hausse de 0.2%. Depuis juillet 1972, l'indice des aliments a avancé de 14.7%, le prix des aliments consommés à la maison ayant augmenté de 15.6% et celui des repas pris à l'extérieur, de 10.4%.

L'indice de l'habitation est passé de 152.1 en juin à 152.8 en juillet, ce qui représente une augmentation de 0.5%. Cette avance, qu'on retrouve régulièrement entre ces 2 mois au cours des dernières années, est attribuable à la hausse de l'élément logement et de l'élément dépenses de ménage. Pour ce qui est de l'indice du logement, l'élément propriété a avancé de 0.7% en raison d'une hausse des indices des maisons neuves, de l'intérêt hypothécaire et des réparations à la charge du propriétaire; les loyers ont augmenté de 0.2%. Parmi les articles qui composent les dépenses de ménage on note une augmentation des tarifs d'électricité dans certaines villes. Le prix des meubles a augmenté, en moyenne, de 0.4% en raison de diverses augmentations du prix des meubles de la salle de séjour et de salle à manger. Parmi les autres articles d'ameublement dont le prix a augmenté, citons le linge de maison et les rideaux, les revêtements de sol et les articles de toilette. L'indice des services aux ménages a augmenté de 1.2% en raison de l'augmentation des tarifs de téléphone au Québec, en Ontario, et de la hausse des gages versés aux aides domestiques dans de nombreuses villes. Le prix des fournitures de ménage a augmenté, en moyenne, de 0.4%. Au cours des 12 derniers mois, l'indice de l'habitation a augmenté de 6.6%.

The Clothing index edged up 0.1% to 138.2 in July from 138.1 in June. Footwear prices rose, on average, 0.3%. Scattered increases were recorded for all items surveyed. The children's wear and the piece goods components both rose 0.2%. However, the indexes for women's and men's wear remained unchanged as price increases for some items were offset by reductions for others. Between July 1972 and July 1973 the Clothing index rose 5.0%.

The Transportation index rose 0.4% to 136.7 in July from 136.1 in June as increases were recorded in both the private and the public transportation components. Within the former, an advance of 0.8% in the automobile operation and maintenance index was mainly caused by increases in gasoline prices, notably in cities in Quebec and Ontario. New car quotations fell marginally. The increase in the public transportation element was almost entirely attributable to a rise in the train fares index. Between July 1972 and July 1973, the Transportation index rose 2.3%.

In July 1973, the Health and Personal Care index remained unchanged from its previous month's level of 156.3 and stood 4.8% above a year earlier. In the latest month, higher prices were recorded for razor blades and toothpaste. For other items of personal care, including toilet soap and shaving cream, registered decreases.

The Recreation, Education and Reading index advanced 2.0% to 146.9 in July from 144.0 in June, reflecting increases in the recreation and the reading components. Generally higher rates charged by hotels and motels were the main cause of the rise in the recreation index, while the reading component rose in response to higher newspaper subscription rates in some centres. In the twelve months ending July 1973, the Recreation, Education and Reading index rose 5.4%.

In July 1973, the Tobacco and Alcohol index was unchanged from its June level of 136.4 and stood 2.7% above the level of July 1972.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between June and July, the total goods index advanced 0.9%, with the main impetus coming from non-durable goods which rose 1.3% mainly in response to higher food and gasoline prices. The indexes for both durable and semi-durable goods were 0.1% higher, the former mainly because of increased furniture and floor covering quotations and the latter in response to higher prices for clothing, linen and draperies. The services index rose 0.7% mainly in response to increased charges for shelter and domestic services. Between July 1972 and July 1973, the total goods index advanced 8.7% and that for services 6.3%.

L'indice de l'habillement n'a augmenté que de 0.1%, passant de 138.1 en juin à 138.2 en juillet. Le prix des chaussures a augmenté en moyenne, de 0.3% en raison de diverses augmentations du prix de tous les articles observés. Les vêtements pour enfants et les tissus à la verge ont tous deux augmenté de 0.2%. Par contre, l'indice des vêtements pour femmes et celui des vêtements pour hommes sont restés stationnaires, l'augmentation du prix de certains articles ayant été compensée par la baisse du prix de certains autres. Au cours des 12 derniers mois, l'indice de l'habillement a augmenté de 5.0%.

L'indice des transports a progressé de 0.4%, passant de 136.1 en juin à 136.7 en juillet; on a en effet observé des augmentations à la fois pour les transports privés et les transports publics. Dans le premiers cas, il y a eu avance de 0.8% de l'indice des frais d'utilisation d'entretien d'automobile, presque entièrement du fait d'une hausse des prix de l'essence, notamment dans les villes du Québec et de l'Ontario. Le prix des voitures neuves a légèrement baissé. La hausse de l'élément transports publics est presque entièrement imputable à une augmentation de l'indice des tarifs ferroviaires. Entre juillet 1972 et juillet 1973, l'indice des transports a augmenté de 2.3%.

En juillet 1973, l'indice des soins personnels et de santé est resté inchangé par rapport au mois précédent, (156.3); il était de 4.8% supérieur à celui d'un an plus tôt. Au cours du mois étudié, on a noté une hausse du prix des lames de rasoir et de la pâte dentifrice, mais le prix des autres articles de soins personnels, y compris le savon de toilette et la crème à raser, a baissé.

L'indice des loisirs, formation et lecture a progressé de 2.0%, passant de 144.0 en juin à 146.9 en juillet, à la suite d'augmentations de l'élément loisirs et de l'élément lecture. C'est la hausse des tarifs des hôtels et motels qui est en général la raison principale de l'accroissement de l'indice des loisirs; l'élément lecture, pour sa part a progressé par suite de la hausse des tarifs d'abonnement des journaux dans certaines villes. Au cours des douze mois se terminant en juillet 1973, l'indice des loisirs, formation et lecture a progressé de 5.4%.

En juillet 1973, l'indice des tabacs et alcools est resté inchangé par rapport à son niveau de juin, (136.4); il était de 2.7% supérieur à son niveau de juillet 1972.

Les différentes composantes de l'indice des prix à la consommation, si on les classe par biens et services, présentent un autre aspect de la variation des prix. De juin à juillet, l'indice de l'ensemble des biens a progressé de 0.9%, progression principalement imputable aux biens non durables, dont l'indice a augmenté de 1.3% en raison surtout de la hausse du prix de l'essence et des aliments. Les indices des biens durables et semi-durables ont tous deux augmenté de 0.1%, le premier en raison d'un accroissement des prix des meubles et des revêtements de sol, et le second, par suite d'une augmentation des prix des vêtements du linge de maison et des rideaux. L'indice des services a avancé de 0.7%, à la suite principalement d'un accroissement des frais de logement et des services domestiques. Entre juillet 1972 et juillet 1973, l'indice de l'ensemble des biens s'est accru de 8.7%, et celui des services, de 6.3%.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES

TABLEAU 2 INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

Industries and selected commodities(I)		1961 = 100												Annual Annuel	
Industrie et certains produits(I)		Month - Mois													
			J	F	M	A	M	J	J	A	S	O	N	D	
Canned meals, ready to serve - Repas en conserve, prêts à servir.		1969													
		1970													
		1971	128.5	132.4	132.4	130.2	130.2	133.5	133.5	129.6	133.5	133.5	129.6	129.6	131.4
01 1120 051		1972	133.5	130.4	130.4	134.2	136.1	131.7	136.1	136.5	133.6	136.8	135.0	135.0	134.1
		1973	138.0	140.6	140.7	139.2	148.7	148.7	151.7						
Soups, all kinds, (excl. infant and frozen) - Soupes de toutes sortes, (sauf pour bébés et congelées).		1969	106.4	103.1	108.2	103.8	108.2	104.9	103.6	107.8	105.8	102.0	108.6	109.5	106.0
		1970	105.2	107.0	109.2	111.4	108.1	108.7	112.0	109.3	106.6	107.8	109.5	108.5	108.6
		1971	106.1	112.8	112.8	110.2	117.3	117.3	113.2	113.0	114.7	113.1	111.7	113.5	113.0
		1972	111.7	111.2	114.3	117.0	115.4	115.4	119.0	115.9	117.3	117.7	113.7	120.6	115.8
01 1120 054		1973	113.7	121.5	117.1	121.5	121.6	116.9	124.7						
Tomato juice - Jus de tomate		1969	121.2	127.6	131.2	124.8	124.7	127.6	131.2	129.4	128.8	129.5	131.6	131.6	128.3
		1970	130.3	130.3	132.8	132.8	127.9	132.6	132.6	132.6	132.6	132.6	132.6	134.4	132.0
		1971	129.7	134.4	137.1	132.4	140.1	140.1	140.1	140.1	141.7	141.7	137.4	141.7	138.0
		1972	141.7	140.7	144.0	146.2	146.2	148.9	148.9	145.5	148.7	151.1	156.4	156.4	147.9
01 1120 062		1973	154.1	150.6	154.1	159.9	156.8	162.8	157.4						
Tomato catsup - Ketchup à la tomate		1969	113.4	114.1	112.1	101.3	107.0	117.5	118.2	111.1	111.1	118.2	118.2	118.2	113.4
		1970	106.7	118.2	118.2	118.2	114.8	115.4	120.4	121.1	115.4	122.8	117.9	120.9	117.5
		1971	127.8	127.8	107.5	115.9	116.6	121.2	121.2	123.7	125.1	123.5	128.7	123.5	121.9
		1972	128.7	128.7	123.5	128.1	128.7	128.7	130.6	130.6	136.3	132.8	136.3	136.3	130.8
01 1120 066		1973	136.3	136.3	136.3	136.3	138.1	138.1	138.1						
Apple juice - Jus de pomme		1969													
		1970													
		1971	115.5	111.0	115.5	115.5	115.5	111.0	115.5	115.5	115.5	116.6	116.6	116.6	115.0
		1972	116.6	118.1	121.2	121.2	121.2	126.4	131.4	131.4	130.5	126.6	126.6	130.9	125.2
01 1120 071		1973	130.9	133.6	138.1	138.1	141.1	141.1	141.1						
Fruit drinks, non carbonated - Boissons de fruits non gazéifiées.		1969													
		1970													
		1971	119.1	119.1	119.1	119.1	119.1	112.9	119.1	121.5	121.5	121.5	121.5	121.5	119.6
		1972	121.5	121.5	123.8	123.8	125.6	125.6	125.6	129.0	129.0	129.0	129.0	129.0	126.0
01 1120 075		1973	129.0	129.0	122.4	122.4	122.4	122.4	126.8						
Jams - Confitures		1969	119.9	114.9	117.6	124.5	125.5	127.7	130.7	120.4	125.0	133.6	135.3	135.3	125.9
		1970	135.3	128.4	128.4	135.3	139.1	139.1	130.6	137.6	137.6	135.3	137.6	137.6	135.2
		1971	137.6	130.6	138.1	138.1	138.7	138.7	138.7	138.7	138.7	138.7	138.7	140.7	138.0
		1972	140.7	140.7	133.0	140.7	145.1	145.1	141.3	145.3	145.3	148.8	149.3	149.3	143.7
01 1120 076		1973	149.2	149.2	149.2	155.0	155.0	157.1	160.2						
Marmalades - Marmelades		1969	115.8	110.8	115.0	118.7	120.5	119.0	123.2	120.5	125.8	128.3	128.3	128.3	121.2
		1970	126.8	126.8	126.8	126.8	128.3	124.8	128.3	124.8	127.3	126.0	126.7	126.7	126.7
		1971	128.3	128.3	128.3	128.3	128.3	128.3	128.3	128.3	128.3	131.0	131.0	131.0	129.0
		1972	131.0	131.0	135.8	135.8	140.0	140.0	135.5	135.5	135.5	140.0	150.8	150.8	138.5
01 1120 078		1973	150.9	150.9	150.9	150.9	150.9	152.5	156.9						
Fruits, frozen - Fruits congelés		1969	109.2	110.9	109.0	111.3	111.3	111.7	121.8	114.8	114.8	114.8	114.8	114.8	113.3
		1970	117.7	117.7	117.7	117.7	115.3	115.3	114.5	114.5	115.1	113.4	113.0	113.0	115.4
		1971	113.7	113.7	113.7	112.9	112.9	112.9	113.8	114.5	114.5	112.1	114.5	114.5	113.5
		1972	114.5	114.5	114.5	115.5	115.5	115.5	117.9	117.9	117.7	117.7	117.7	117.7	116.4
01 1120 090		1973	123.5	124.1	124.1	124.1	124.1	130.4	138.4						
Vinegar, made for sale spirit (basis 4.1 acetic acid) - Vinaigre pour spiritueux commerciaux (4.1 acide acétique).		1969	125.8	125.8	127.0	127.0	124.5	124.5	124.5	124.6	127.1	127.1	127.1	127.1	126.0

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES
 TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

1961 = 100

Industries and selected commodities(1) Industrie et certains produits(1)	Month — Mois												Annual — Annuel
	J	F	M	A	M	J	J	A	S	O	N	D	
1960	114.6	116.0	115.8	115.4	115.5	116.7	116.4	116.6	116.8	117.2	117.2	118.1	116.3
1970	119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.9	118.8	119.3
1971	119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6
1972	124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4
1973	133.0	134.5	136.5	138.0	139.4	141.0	142.8						

- (1) Indexes for 1972 and 1973 are subject to revision — Les indices pour 1972 et 1973 sont sujets à révision
 (2) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. — À compter de janvier 1973 on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.
 (3) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. — Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series — Ancienne série	New series — Nouvelle série
December — 1970 — Décembre	95.1	92.3
January — 1971 — Janvier	95.1	92.1
Average — 1971 — Moyenne	95.2	91.8

- (4) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. — Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augment des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
 (5) Gross weighted, including inter-industry shipments. For explanation see page 88. — Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

ALL-ITEMS Consumer Price Index Converted to 1949=100 - July 1973 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Juillet 1973 195.1

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

TABLE 9. Consumer Price Indexes for Canada - Main Groups and Selected Components and Items(1)

TABLEAU 9. Indices des prix à la consommation, Canada - Groupes principaux, éléments et articles choisis(1)

(1961=100)

	July 1973 Juill.	June 1973 Juin	July 1972 Juill.	June 1972 Juin	1972	1971	1970
All-items - Indice d'ensemble	151.0	149.7	140.2	138.5	139.8	133.4	129.7
Food - Aliments	163.5	160.5	142.5	137.5	141.4	131.4	130.0
Food for home consumption - Aliments consommés à la maison	160.2	156.8	138.6	133.2	137.5	127.4	126.8

Shortening - Graisse végétale	127.1	124.9	123.4	123.1	121.8	118.7	114.1
Salad/cooking oil(2) - Huile à frire ou de table(2)	100.7	99.9
Salad dressing - Vinaigrette	110.8	110.8	111.0	109.9	109.9	105.4	104.7
Meat, poultry and fish - Viande, volaille et poisson	180.3	175.8	150.1	145.7	147.7	130.9	133.7
Meat - Viande	179.4	175.0	149.9	145.0	147.5	131.2	135.8
Beef - Boeuf	194.1	188.4	160.2	155.7	157.6	144.3	140.7
Sirloin steak - Bifteck de surlonge ..	183.9	174.7	160.4	151.5	152.4	143.4	139.7
Round steak - Bifteck dans la ronde ..	200.4	193.1	160.5	157.3	160.4	148.0	127.4
Prime rib roast - Rôti de côtes de choix	183.6	179.6	157.0	154.1	154.3	139.9	114.1
Blade roast - Rôti de palette	181.7	181.9	149.7	149.3	148.9	133.1	133.5
Stewing beef - Boeuf pour ragoût	185.7	182.1	158.2	155.6	157.3	145.9	142.1
Hamburg - Boeuf haché	220.0	215.8	170.2	166.6	170.4	148.5	144.8
Liver - Foie	168.5	167.9	142.7	142.2	134.8	119.1	132.3
Pork - Porc	158.6	155.1	134.6	127.4	132.4	109.6	128.1
Bacon(3) - Bacon(3)	141.1	133.0	118.8	110.4	115.8	88.8	118.8
Smoked ham(4) - Jambon fumé(4)	147.4	147.3	126.7	120.7	125.7	110.7	128.9
Cottage Roll - Roulé de haut d'épaule ..	169.4	168.7	136.9	132.3	135.0	110.9	127.0
Loin cuts - Coupes de longe	180.4	175.8	156.3	147.3	153.0	122.7	137.2
Shoulder cuts - Coupes d'épaule	160.3	160.2	129.5	123.4	128.0	102.4	120.5
Sausages - Saucisses	159.6	159.0	131.7	127.8	130.9	119.6	127.2
Other meat - Autres viandes	174.0	172.2	148.6	146.6	146.6	133.1	135.6
Wieners - Saucisses de Francfort	156.0	155.3	130.2	129.4	127.8	119.0	121.5
Veal - Veau	225.6	219.7	192.0	186.8	189.9	165.0	162.6
Canned meat - Viandes en conserve	145.0	142.7	121.3	120.1	123.3	123.0	130.7
Poultry - Volaille	163.9	158.5	127.3	125.7	124.6	108.9	105.8
Chicken - Poulet	169.0	163.5	131.5	129.9	128.9	112.0	107.7
Turkey - Dinde	139.1	134.5	108.8	107.3	105.4	95.8	99.1
Fish - Poisson	209.2	207.6	182.6	179.2	180.5	157.0	150.6
Canned salmon - Saumon en boîte	159.5	158.1	146.3	146.0	149.0	143.0	144.1
Canned tuna(2) - Thon en boîte(2)	105.2	103.4
Eggs - Oeufs	132.0	126.7	96.0	78.6	94.7	87.3	99.0
Fruit and vegetables - Fruits et légumes ...	195.0	184.1	147.1	142.5	139.8	130.5	126.8
Fresh fruit - Fruits frais	203.4	197.2	152.4	159.1	143.2	132.7	116.0
Oranges - Oranges	114.7	115.4	103.5	101.9	104.4	111.9	102.5
Bananas - Bananes	93.7	91.4	79.7	84.8	79.3	76.2	85.7
Apples - Pommes	196.1	167.5	134.4	127.2	123.8	118.8	112.8
Grapefruit - Pamplemousses	172.6	161.8	176.7	163.9	153.4	154.8	140.9
Processed fruit - Fruits traités	141.8	139.7	126.4	125.2	127.6	122.7	125.5
Canned peaches - Pêches en conserve	158.8	155.4	139.8	138.2	140.8	135.5	139.0
Canned pears - Poires en conserve	132.6	131.9	124.5	123.5	124.5	120.7	123.7
Canned apple sauce(2) - Compote de pommes en conserve(2)	103.7	102.3
Canned apple juice(3) - Jus de pommes en conserve(3)	134.8	132.8	123.7	116.1	122.0	110.4	117.2
Canned orange juice - Jus d'oranges en conserve	112.3	112.4	113.8	114.8	115.0	108.9	108.6
Raisins - Raisins secs	201.9	194.0	148.5	148.4	153.4	150.2	153.0
Fresh vegetables - Légumes frais	237.7	212.6	159.9	140.7	147.0	135.0	138.4
Potatoes - Pommes de terre	317.8	251.8	153.8	117.7	128.2	114.7	134.0
Tomatoes - Tomates	205.3	161.2	178.6	176.0	167.5	162.2	143.7
Lettuce - Laitue	258.6	293.4	142.7	126.1	162.9	160.8	139.9
Carrots - Carottes	155.5	133.2	135.6	148.3	124.9	123.4	109.1

Transportation services - Transports	178.3	177.9	174.8	174.6	174.8	168.1	160.0

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (1) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (11) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (1) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (11) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

	Personal care supplies - Fournitures pour les soins personnels.	1.2	109	112	114
	Personal care services - Services de soins personnels.	1.0	87	75	90
6	Recreation and reading - Loisirs et lecture	4.7	97	101	104
7	Tobacco and alcohol - Tabacs et alcools	6.5	126	112	111

(1) For explanatory text concerning this table, see page 96. As well, inter-city indexes of retail price differentials are now being updated on a component by component basis and will be published as they become available. Details can be found in the Retail Prices and Living Costs Service Bulletin (Statistics Canada Catalogue No. 62-005), Vol. 2, No. 13, November 1973.

TABLEAU 14. Indices comparatifs des prix de détail par ville, mai 1971(1) Groupes choisis de biens et de services, niveau des prix à Winnipeg en mai 1971=100

(1) Indexes for current year are subject to revision. Les données de l'année courante sont sujettes à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

- (1,2) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
- (2) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contract profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.
- (3) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (4) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (5) Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

(1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) Major components for the provincial indexes are presented annually in Construction Price Statistics Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.

(4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix de vente, d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures" de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans: "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, sont comptés deux fois, l'une fois dans l'indice des prix de la farine et l'autre fois dans l'indice des prix de la boulangerie. La pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits, tels que le pain, les biscuits ou les gâteaux, est donc double.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: à partir de janvier 1973, les prix recueillis auprès des diverses sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés. En outre, les prix des produits en acier inoxydable ont été supprimés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Les prix des produits en acier inoxydable, cependant, sont inclus dans l'indice des prix de l'industrie de la sidérurgie.

The concept of price change measured is net return to

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Phase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a of input prices, inclusive of transportation and broker-ees, submitted by a wide variety of purchasers from ed industries. Indexes for certain categories of metals ot be published because of the confidentiality of the data the Statistics Act.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western wheat used in the index prior to st 1972, are buying prices of the Canadian Wheat Board os. 1, 2 and 3 Northern at Thunder Bay. From August 2 forward, prices used are for Nos. 1 and 2 C.W. Red g 14% at Thunder Bay. Prices for western oats and are also supplied by the Wheat Board. Initial pay-are first used in the index calculation and are revised her payments are announced.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. À compter du 1er août 1972, les prix utilisés sont ceux du blé rouge de printemps, nos 1 et 2 (14%) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Final payments for the crop year August 1971 - July were announced on February 13, 1973 for wheat and no final payment was granted for barley.

Les prix définitifs pour la campagne allant d'août 1971 à juillet 1972 ont été annoncés le 13 février 1973, en ce qui concerne le blé et l'avoine. Il n'y a pas eu de dernier paiement pour l'orge.

General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39=100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

30

$$\sqrt[30]{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}$$

30

$$\sqrt[30]{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}$$

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est un indice des classés par produit. Cet indice est "général" du fait qu'il prend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprend surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions propres de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de mesurer exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, l'indice ne constitue pas une mesure du pouvoir d'achat du revenu parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a tendance à s'en servir pour comparer le comportement de différents groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de nombreux autres groupes pour lesquels on publie des indices. Ce dernier est un indicateur de la situation générale du commerce, l'indice habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité première réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 catalogue).

Indice des prix de trente matières industrielles (1935-39=100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de ces marchandises. La formule est la suivante:

30

$$\sqrt[30]{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}$$

30

$$\sqrt[30]{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}$$

The selection of materials for pricing relates to groups as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to the use of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that do not constitute important industrial inputs.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

RETAIL PRICE INDEXES

The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there is a continually measurable market price over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise

INDICES DES PRIX DE DÉTAIL

L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille de familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles — a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments

Index. In it, all items in the C.P.I. have been reclassified to two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 no. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that they do not in any way indicate whether price levels are higher or lower in one city than in another. Rather, they measure, within each city, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services

l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent,

that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0 / 144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is $\$90.91 ((100.0 / 110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse du prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice de prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cent ($\$1.00 \times 100.0 / 144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (Tableau 12) doivent noter que, comme dans le cas de l'indice de prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut être calculée en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans la proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des salaires moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 au montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera $\$90.91 ((100.0 / 110.0) \times \$100)$, que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 10% rise in money wages $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is 102.98 $((146.23/142.0) \times 100)$. (The wage and the price index both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, wage data adjusted by the consumer price index (which assumes a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce wages to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du

"take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971

revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations de niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherches. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons de prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour des mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969 et avril 1972 de *Prix et indices des prix* (no 62-002 catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillies lors de la confection des indices nationaux et urbains de la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et assortissant autant que possible les points de vente au détail de même type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées

the data, the updating of these measurements of inter-city price differentials was accomplished by application of relative movement of prices, at the item level in each city, for the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns among cities, the magnitude of these differences in the areas covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-city retail price differentials, aggregative indexes beyond the budget groupings are not shown.

The weighting factors used to combine items to group component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

1 Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. The data have been modified to reflect 1961 prices and quantities. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time

Farm Input Price Indexes replace one of the two component indexes of the previously published series, Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the *Globe and Mail* and the *Montreal Gazette*. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of price in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new subgroups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

Le bulletin hors série *Farm Input Price Indexes, 1961=100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (no 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961=100* (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un plac hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture à la Bourse du jeudi indiqués dans le *Globe and Mail* et dans le *Montreal Gazette*. Pour les actions privilégiées, les prix sont des moyennes pondérées mensuelles. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération est l'année 1956. Toutes les séries ont été recalculées sur la base 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâte et papier, huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des lignes a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe des banques et de l'ancien indice supplémentaire d'investissement. Les facteurs constants de pondération qui étaient auparavant limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent d'être basés sur les actions en circulation.

For the list of stocks currently included in the Investment Index and Preferred Index, see *Prices and Price Indexes* February 1973.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. Comparison of these series with the implicit price deflator (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI (2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate for material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades in cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining components with the weights as shown will not provide a composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of *Prices and Price Indexes* (62-002). This index is found in Table 20 of *Prices and Price Indexes* (62-002). Full trade detail, by city, is published

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de février 1973.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices—and—Price—Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I. (2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé, aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication

Gross National Product Division, Statistics Canada.
Industry Selling Price Indexes 1956-1968 Cat.
62-528.

no 62-528 au catalogue.

quarterly in the Construction Price Statistics Service Bulletin. (62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction* in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously

Prix et indices des prix (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. Ces taux sont publiés sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyennant les données de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Etant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux de métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, exprimés en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations des prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 & 10 du bulletin intitulé *Price Indexes of Highway Construction Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou mettre à jour les prix de travaux de routes effectués précédemment.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

pleted roadwork, and as historical measurements of price levels in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as water pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by the determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are as paid by government departments to suppliers.

Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and installing electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. Such uses of the indexes introduced in this publication have specific short-comings. Nonetheless, they may be helpful for the purposes provided the users understand the deficiencies. The reader is asked to make particular note of Section III of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component indexes and their weights included in the aggregate index presented herein are inappropriate for a particular use the user should consider selecting appropriate com-

ponents, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certain matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62 = 526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent

ponent indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and right-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités, mesure et des conditions de vente valables pour les ventes d'une grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ce cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, lignes de transport d'énergie, de postes de transformation ou postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, compteurs, les transformateurs de distribution et les dépenses de main-d'œuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants produisant de l'électricité destinée à l'auto-consommation et ceux qui peuvent également vendre de l'électricité ont été exclus de l'enquête.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which is described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100. Most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in the indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and general sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices and Inflation collections from manufacturers most of whom reside in the United States.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'œuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Le premier indice par industrie a été publié au milieu 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

Industry Selling Price Index: Manufacturing
(1961 = 100)

The industry selling price index for manufacturing rose 3.0% in August to 147.1 from the July index level of 142.8. It was 15.1% higher than the August 1972 index of 127.8. Of the 101 industry indexes included in the total, 72 were higher, 6 declined and 23 were unchanged.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in the foods and beverages group, particularly in the slaughtering and meat packing industries, up 22.6%, and flour mills, up 26.4% (published Agriculture Canada data indicate that there was a significant decline in meat prices in September from their August highs). Decreases also occurred in petroleum and coal products, reflecting higher prices in the petroleum refining industry. Increases were recorded in the pulp and paper mills industry and were mainly responsible for advances in the paper and allied products group. Declines for the period were relatively insignificant.

Indice des prix de vente dans l'industrie: industries
manufacturières (1961 = 100)

Pour ce qui est des industries manufacturières, l'indice des prix de vente dans l'industrie a augmenté de 3.0% en août pour s'établir à 147.1 contre 142.8 en juillet. Il était de 15.1% plus élevé que celui d'août 1972 qui s'élevait à 127.8. Des 101 indices qui composent l'indice total, 72 ont progressé, 6 ont régressé et 23 sont demeurés inchangés.

Les principaux facteurs qui ont contribué à faire varier l'indice total de la fabrication ont été les hausses de prix dans le groupe des aliments et boissons, en particulier dans l'abattage et le conditionnement de la viande, qui ont connu une hausse de 22.6%, et dans le meunerie qui a fait ressortir une augmentation de 26.4%. (D'après les données publiées par Agriculture Canada, le prix de la viande a sensiblement diminué en septembre après s'être maintenu à un niveau élevé en août). Des augmentations ont également été enregistrées dans les produits du pétrole et du charbon, en raison de la hausse des prix pour le raffinage du pétrole. La hausse des prix dans l'industrie des pâtes et papiers a été la principale cause de l'avance de l'indice du groupe des produits du papier et produits connexes. En août, les diminutions ont été relativement minimes.

General Wholesale Index (1935-39=100)

The general wholesale price index rose 6.9% in August to 400.5 from the revised July index of 374.7. It was 28.9% higher than the August 1972 index of 310.8. All eight major group indexes were higher.

The vegetable products group index rose 16.4% in August to 407.6 from 350.2 on higher prices for grains (48%), milled cereal foods (29%) and livestock and poultry feeds (7%). (Grain prices published by the Canadian Grain Commission indicate that the increase in wheat prices from August to September was moderate, while feed grain prices showed significant price declines.) An advance of 13.5% to 518.2 from 456.6 in the animal products group index reflected price increases for fresh meats (23%), cured meats (29%), livestock (17%), hides and skins (13%), fishery products (13%), and eggs (13%). (Published Agriculture Canada data indicate that there were significant declines in livestock and meat prices in September from their August highs.) Higher prices for zinc, solder and copper were chiefly responsible for a rise of 2.2% to 332.7 from 325.5 in the non-ferrous metal products group index. An advance of 1.6% to 336.0 from 330.7 in the textile products group index reflected price increases for cotton yarns and raw cotton. The non-metallic minerals group index moved 1.5% higher to 255.2 from 251.5 on higher prices for components such as petroleum products. An increase of 1.4% to 505.9 from 499.1 occurred in the wood products group index on price increases for woodpulp and newsprints.

The general wholesale index, which advanced 28.9% from August 1973, contains relatively few final product price indexes for commodities, such as consumer durable goods, whose prices have changed little during the year. The industry selling price index for manufacturing, which advanced 15.1% during the same period, does include such products.

The following table lists the total Index and component groupings for specified dates:

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a progressé de 6.9% passant de 374.7 en juillet (indice rectifié) à 400.5 en août, ce qui représente une augmentation de 28.9% par rapport à l'indice d'août 1972 (310.8). Les indices des huit groupes principaux ont tous avancé.

L'indice des produits d'origine végétale a monté de 16.4% en août, passant de 350.2 à 407.6, en raison de la hausse des prix des grains (48%), des céréales moulues (29%) et des aliments pour bétail et volaille (7%). (D'après les chiffres sur les céréales publiés par la Commission canadienne des grains, le prix du blé a augmenté de façon modérée d'août à septembre, tandis que celui des grains de provende a sensiblement baissé). L'avance de 13.5% de l'indice du groupe des produits d'origine animale, qui est passé de 456.6 à 518.2, est attribuable à la hausse du prix des viandes fraîches (23%), des viandes salées (29%), du bétail (17%), des peaux (13%), des produits de la pêche (13%) et des œufs (13%). (D'après les données publiées par Agriculture Canada, les prix du bétail et de la viande ont baissé sensiblement en septembre après s'être maintenus à un niveau élevé en août). L'accroissement de 2.2% de l'indice du groupe des produits métalliques non ferreux, qui est passé de 325.5 à 332.7, est surtout attribuable à la hausse du prix du zinc, de la soudure et du cuivre. L'avance de 1.6% de l'indice du groupe des matières textiles, qui est monté de 330.7 à 336.0, traduit la hausse du prix des filés de coton et du coton brut. L'indice du groupe des minéraux non métalliques a progressé de 1.5%, passant de 251.5 à 255.2, en raison de la hausse du prix de certains éléments comme les produits du pétrole. L'augmentation de 1.4% de l'indice du groupe des produits du bois (qui est passé de 499.1 à 505.9) est due à la progression des prix de la pâte de bois et du papier journal.

L'indice général des prix de gros, qui a progressé de 28.9% depuis le mois d'août 1972, présente relativement peu d'indices de prix de produits finals pour des éléments tels que les biens durables de consommation, dont les prix n'ont guère varié au cours de l'année. L'indice des prix de vente dans l'industrie pour les industries manufacturières, qui a avancé de 15.1% au cours de cette même période, englobe de tels produits.

Le tableau ci-dessous présente l'indice général et les indices des éléments pour des dates déterminées:

	August*	July*	August*	July	% Change	
					August - Août	August
	1973	1973	1972	1972	1973	1973
	Août*	Juillet*	Août*	Juillet	July - Juillet	Août

*These indexes are preliminary. - Ces indices sont provisoires.

Security Price Indexes (1961=100)

The index of common stock prices rose 1.7% to 187.2 in August from 184.0 in July. Of the three major groups, industrials advanced 2.7% to 203.3, utilities decreased by 1.2% to 138.6 and finance increased 2.5% to 178.2. Among thirteen industrial sub-groups, textiles and clothing and construction increased 8.2% and 8.1% to 152.4 and 153.5 respectively. In utilities, each sub-group showed a decline ranging from 5.8% in pipelines (140.7) to 1.4% in telephone (83.2). In finance, banks advanced 3.0% to 210.8 while investment and loan increased 0.7% to 127.1.

In the same period, the index of mining stock prices declined 4.2% to 137.1. Golds slowed down 9.0% to 170.3 while base metals fell 0.1% to 120.1.

Of the two supplementary price indexes, a rise of 2.8% was recorded in uranium (249.6), while primary oil and gas rose up 8.3% to 462.2.

The preferred stock index advanced 0.4% to 71.8.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at term-markets advanced 10.7% to 421.1 in August from the July index of 380.5. An increase of 11.7% to 558.3 from 500.0 in the animal products index reflected price increases for hogs, pigs, eggs, cheesemilk and wool on both Eastern and Western markets and for calves in the East. Lower prices were shown for lambs on both markets. The field products index advanced 8.8% to 283.9 from 261.0 on higher prices for barley and rye on both markets, and for corn in the East and wheat, flax, wheat and hay in the West. Lower prices were shown for potatoes on both markets and for hay and wheat in the East.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, rose 6.4% to 419.9 in August from the revised July index of 394.8. Prices were higher for fifteen commodities, lower for two and unchanged for thirteen. Principal changes included increases for wheat, cottonseed oil, linseed oil, oats, steers, beef-hides, domestic copper, zinc, tin, spruce lumber, and raw cotton. Decreases were recorded for raw sugar and raw copper.

Indice des cours des valeurs mobilières (1961=100)

L'indice des cours des actions ordinaires a augmenté de 1.7% passant de 184.0 en juillet à 187.2 en août. Parmi les trois grands groupes, les valeurs industrielles ont augmenté de 2.7% pour s'établir à 203.3, les services publics ont baissé de 3.2% pour se fixer à 138.6 et les finances ont augmenté de 2.5% à 178.2. Parmi les treize sous-groupes industriels, les textiles et vêtements ainsi que les valeurs de la construction ont augmenté de 8.2% et 8.1% pour s'établir à 152.4 et 153.5 respectivement. Pour ce qui est des services d'utilité publique, chacun des sous-groupes a enregistré une baisse allant de 5.8% pour les pipelines (140.7) à 1.4% pour le téléphone (83.2). Quant aux finances, les banques ont augmenté de 3.0% pour se fixer à 210.8 tandis que les placements et les prêts augmentaient de 0.7% pour s'établir à 127.1.

Au cours de la même période, l'indice des titres miniers a diminué de 4.2% pour s'inscrire à 137.1. Les aurifères ont décliné de 9.0% à 170.3 et les métaux communs, 0.1% à 120.1.

Pour ce qui est des deux indices supplémentaires, on a noté une hausse de 2.8% de l'uranium à 249.6 tandis que le pétrole et le gaz primaires augmentaient de 8.3% à 462.2.

L'indice des actions privilégiées a progressé de 0.4% à 71.8.

Indices des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a avancé de 10.7%, passant de 380.5 en juillet à 421.1 en août. La hausse de 11.7% de l'indice des produits d'origine animale (qui est passé de 500.0 à 558.3) est attribuable à l'augmentation du prix des porcs, des bouvillons, des oeufs, du lait de fromagerie et de la laine sur les marchés de l'Est et de l'Ouest et des veaux dans l'Est. Les deux marchés ont fait ressortir une baisse du prix des agneaux. L'indice des prix des grandes cultures a progressé de 8.8%, passant de 261.0 à 283.9, en raison de la hausse du prix de l'orge et du seigle sur les deux marchés, du maïs dans l'Est et de l'avoine, du lin, du blé et du foin dans l'Ouest. On a observé une baisse du prix des pommes de terre sur les deux marchés et du foin et du blé dans l'Est.

Indice des prix de trente produits industriels (1935-39=100)

L'indice des prix de trente produits industriels, calculé comme une moyenne géométrique non pondérée, a progressé de 6.4%, passant de 394.8 en juillet (indice rectifié) à 419.9 en août. Les prix de quinze produits ont monté, ceux de deux produits ont baissé et ceux de treize produits sont demeurés stationnaires. Au nombre des principales variations, on compte une hausse du prix du blé, des porcs, de l'huile de coton, de l'huile de graine de lin, de l'avoine, des bouvillons, des peaux de boeuf, du cuivre de propre sol, du zinc, de l'étain, des sciages d'épicéa et du coton brut, et une baisse du prix du sucre brut et du caoutchouc non traité.

Consumer Price Movements

The Consumer Price Index for Canada (1961=100) advanced 1.3% to 153.0 in August from 151.0 in July. Nearly two-thirds of the increase was attributable to a further surge in food prices which moved this component up 3.2%. The level of prices for All-Items other than Food rose 0.5% in the latest month, mainly on account of increases of 1.5% and 0.5%, respectively, in the Transportation and in the Housing elements. The Health and Personal Care index registered an advance of 0.8%, while the Clothing and the Tobacco and Alcohol elements each edged up 0.1%. No change over the preceding month was recorded in the index for Recreation, Education and Reading. Between August 1972 and August 1973, the All-Items Index advanced 8.3%.

The Food index climbed 3.2% to 168.7 in August from 163.5 in July mainly as a result of a 3.2% advance for food consumed at home. Sharply increased meat, poultry and egg prices at the beginning of August were major contributors to the considerably larger than usual rise in the latest month's index, but all other main elements, except fresh produce, also moved up. Led by a one-month rise of 15.4% in the retail price of pork, the meat, fish and poultry index climbed 7.9% between July and August and stood 28.3% above its level of twelve months earlier. Beef prices advanced 5.3% in the latest month and 26.5% since August 1972. Poultry prices likewise climbed 7.6% between July and August and nearly 40% over the year. Canned salmon and tuna quotations were about 6% higher in the latest month, registering increases of 15% and 31%, respectively, since a year earlier. In the latest month, eggs increased in price by 13.4% to register their sharpest rise in five consecutive months of advance. In contrast, the fresh fruit index levelled off in August and fresh vegetable prices, which normally decline at this time of year, averaged nearly 8% lower than a month earlier though they were still 37% higher than in August 1972. The cereal and bakery products index rose of 1.4% in the latest month was largely attributable to a 1.8% increase in bread prices by early August, before the major impact at the retail level of higher wheat prices. The dairy products index rose 0.5% as all component items, except butter, moved up in price since the preceding month. Other notable price increases between July and August include a general rise in prepared and partially prepared dishes and snacks which, like meals consumed away from home, accelerated their advance in response to higher ingredient costs. In the twelve months to August 1973, the Food index moved up 15.8% with the price of food consumed at home rising 16.2% and that for food away from home 13.2%.

The Housing index rose 0.5% to 153.6 in August from 152.8 in July as a result of increases of 0.4% and 0.7% in the shelter and household operation components, respectively. Within shelter, the homeownership element moved up 0.6% and rents edged up 0.2%. Increased fuel oil prices in many cities across the country was a major contributor to the rise in the household operation component, and although furniture prices remained, on balance, unchanged, other home furnish-

Mouvement des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961=100) est passé de 151.0 en juillet à 153.0 en août, ce qui représente une augmentation de 1.3%. Près des deux tiers de cette avance sont attribuable à une nouvelle hausse du prix des aliments, hausse qui a fait avancer de 3.2% l'indice des aliments. Le niveau des prix pour l'ensemble des articles autres que les aliments a avancé de 0.5%, principalement en raison d'une augmentation de 1.5% des transports et de 0.5% de l'habitation. L'indice des soins personnels et de l'hygiène a avancé de 0.8%; l'indice de l'habillement et celui des tabacs et alcools n'ont progressé que de 0.1%. L'indice des loisirs, de la formation et de la lecture est demeuré stationnaire. Entre août 1972 et août 1973, l'indice d'ensemble a avancé de 8.3%.

L'indice de l'alimentation est passée de 163.5 en juillet à 168.7 en août; cette avance de 3.2% a pour principale cause une hausse de 3.2% de l'indice des aliments consommés à la maison. Cette augmentation est considérablement supérieure à celle qui est normalement enregistrée entre ces deux mois; elle est en grande partie attribuable aux fortes hausses du prix de la viande, de la volaille et des oeufs qui ont été enregistrées au début du mois; a également enregistré une hausse du prix de tous les autres principaux articles à l'exception des fruits et des légumes frais. Le prix de vente au détail du porc a augmenté de 15.4% en un mois; cette augmentation a porté l'indice de la viande, du poisson et de la volaille à un niveau de 7.9% supérieur à celui de juillet, et de 28.3% à celui de l'année dernière. Le prix du boeuf a augmenté de 5.3% par rapport à juillet, et de 26.5% par rapport à août 1972. De même, le prix de la volaille a augmenté de 7.6% au cours du mois et de près de 40% par rapport à l'année dernière. Le prix du saumon et du thon en boîte a augmenté d'environ 6% par rapport à juillet, et respectivement de 15% et 31% par rapport à l'année dernière. Le prix des oeufs a augmenté de 13.4%; cette hausse est la plus forte de celles qu'on a enregistrées au cours des cinq derniers mois de constante progression. L'indice des fruits frais, par contre, est demeuré stationnaire; le prix des légumes frais, qui diminue généralement à cette époque de l'année, a baissé en moyenne, de près de 8% par rapport au mois précédent, mais restait de 3% supérieur à celui d'août 1972. L'indice des céréales et des produits de boulangerie a avancé de 1.4%, en raison principalement de la hausse de 1.8% du prix du pain enregistrée au début du mois d'août, avant même que le gros de l'augmentation du prix du pain ne soit véritablement fait sentir. L'indice des produits laitiers a progressé de 0.5% en raison d'une hausse du prix de tous les articles sauf le beurre. Parmi les autres augmentations importantes, on a relevé une hausse générale du prix des mets partiellement ou entièrement préparés et des grignotines, qui tout comme ceux des repas pris à l'extérieur (hausse de 2.7%), a été en partie provoquée par une augmentation du prix des ingrédients qui entrent dans leur préparation. Au cours des 12 derniers mois, l'indice des aliments a avancé de 15.8%, le prix des aliments consommés à la maison a augmenté de 16.2%, et celui des repas pris à l'extérieur, de 13.2%.

L'indice de l'habitation est passé de 152.8 en juillet à 153.6 en août; cette avance de 0.5% est attribuable à une hausse de 0.4% de l'élément logement et de 0.7% des dépenses de ménage. Dans le chapitre du logement, l'élément propriété a avancé de 0.6%; les loyers, par contre, n'ont augmenté que de 0.2%. L'augmentation du prix du mazout dans bon nombre de villes du pays a été le principal facteur de l'avance des dépenses de ménage; le prix des meubles est en général resté stationnaire; on a par contre en

Items recording advances were floor coverings, linen and paperies, and tableware. The index for household services rose 0.6% following higher insurance rates on household effects, and the price of household supplies advanced, on average, 0.3%. Between August 1972 and August 1973, the housing index advanced 6.8%.

The Clothing index edged up 0.1% to 138.4 in August from 138.2 in July. The price levels of women's and children's wear rose 0.5% and 0.4%, respectively, while, in contrast, a decline of 0.5% was registered for men's wear due mainly to sale prices on some outer wear items in a number of cities. Footwear and piece goods prices rose, on average, 0.2% and 0.2%, respectively. In the twelve months since August 1972, the Clothing index advanced 5.4%.

The Transportation index increased 1.5% to 138.7 in August from 136.7 in July mainly as the result of a 3.0% advance in the automobile operation and maintenance component. Widespread increases were recorded in gasoline prices which climbed, on average, 3.5% in the latest month and 8.5% since May; these advances were most marked in Quebec and Eastern Ontario. Automobile insurance rates moved up, on average, 5.8% as increases were registered in most cities surveyed. The public transportation component edged up 0.2% mainly in response to increased taxi fares in some cities. In the twelve month period ending August 1973, the Transportation index rose 3.3%.

The Health and Personal Care index rose 0.8% to 157.5 in August from 156.3 in July as a result of a 1.3% rise in the personal care component: personal care services advanced 2.5% because of increases in men's haircut and women's hairdressing charges in a number of centres, while quotations for toiletry items rose, on average, 0.2%. Scattered increases in the price of some pharmaceutical products moved the health care index down 0.1%. In the latest twelve months, the Health and Personal Care index advanced 0.8%.

In August 1973, the Recreation, Education and Reading index was unchanged from its July level of 146.9 as a decline in the recreation element was offset by an advance in the education component. Within recreation, lower prices in a number of centres for camera film (including processing) and some decline in football admission charges more than offset generally higher charges for theatre admissions. The advance in the education component was caused by increased living lesson fees in Vancouver. In the twelve months ending August 1973, the Recreation, Education and Reading index rose 4.6%.

The Tobacco and Alcohol index edged up 0.1% to 136.5 in August from 136.4 in July as a result of small increases in the components for tobacco products and alcoholic beverages. In the latest twelve months, the Tobacco and Alcohol index rose 2.7%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between July and August, the total goods index advanced 1.6%, with the main impetus coming from non-

gistré une hausse du prix des revêtements de sol, du linge de maison, des rideaux et des articles de table. L'indice des services aux ménages a augmenté de 0.6% en raison d'une hausse des primes d'assurance sur les effets ménagers; le prix des fournitures du ménage a augmenté, en moyenne, de 0.3%. Entre août 1972 à août 1973, l'indice de l'habitation a avancé de 6.8%.

L'indice du vêtement s'est accru d'à peine 0.1%, passant de 138.2 en juillet à 138.4 en août. Le prix des vêtements pour dames a progressé de 0.5%, et celui des vêtements pour enfants, de 0.4%, alors que l'on constatait une baisse de 0.5% pour les vêtements pour hommes, en raison principalement de soldes portant sur certains vêtements d'extérieur dans un certain nombre de villes. Le prix des chaussures et du tissu à la verge a augmenté en moyenne de 0.1% et de 0.2% respectivement. Au cours des douze mois depuis août 1972, l'indice du vêtement a progressé de 5.4%.

L'indice des transports a augmenté de 1.5%, passant de 136.7 en juillet à 138.7 en août, en raison surtout d'une progression de 3.0% de l'élément utilisation et frais d'automobile. Les prix de l'essence ont augmenté un peu partout, progressant en moyenne de 3.5% le mois dernier, et de 8.5% depuis mai. Ces progressions ont été surtout appréciables au Québec et dans l'Est de l'Ontario. L'assurance automobile a augmenté, en moyenne, de 5.8%, car l'on a noté des relèvements dans la plupart des villes enquêtées. Les transports publics n'ont augmenté que de 0.2% par suite surtout de la hausse des tarifs de taxi dans quelques villes. Au cours de la période de douze mois se terminant en août 1973, l'indice des transports a augmenté de 3.3%.

L'indice des soins personnels et de santé s'est accru de 0.8%, passant de 156.3 en juillet à 157.5 en août, en raison d'une augmentation de 1.3% de l'élément soins personnels: les services de soins personnels ont progressé de 2.5% en raison d'une augmentation du prix de la coupe de cheveux chez les hommes et des soins capillaires chez les femmes dans un certain nombre de centres urbains, tandis que pour leur part les prix des articles de toilette augmentaient en moyenne de 0.2%. Des baisses éparses dans le prix de certains produits pharmaceutiques se sont soldées par un repli de 0.1% de l'indice de l'hygiène. Au cours des douze derniers mois, l'indice des soins personnels et de santé a augmenté de 5.0%.

En août 1973, l'indice des loisirs, de la formation et de la lecture est resté inchangé par rapport à son niveau de 146.9 en juillet, une augmentation de l'élément formation ayant compensé une baisse du prix des loisirs. Dans le domaine des loisirs, une baisse du prix des films (développement compris) et une légère baisse des frais d'admission aux matches de football ont largement compensé l'augmentation générale du prix des billets de cinéma. L'augmentation des prix de la formation était due à l'augmentation des leçons de conduite à Vancouver. Au cours de la période de douze mois se terminant en août 1973, l'indice des loisirs, de la formation et de la lecture a augmenté de 4.6%.

L'indice des tabacs et alcools n'a augmenté que de 0.1%, passant de 136.4 en juillet à 136.5 en août, à la suite de faibles augmentations en ce qui concerne les produits du tabac et les boissons alcooliques. Au cours des douze derniers mois, l'indice des tabacs et alcools a augmenté de 2.7%.

Si l'on classe les articles qui entrent dans l'indice des prix à la consommation par biens et services, on obtient une image différente du mouvement des prix à la consommation. Entre juillet et août, l'indice des biens a progressé de 1.6%, par suite principale-

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES

TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

		1961 = 100													
Industries and selected commodities(1)		Month - Mois												Annual	
Industrie et certains produits(1)		J	F	M	A	M	J	J	A	S	O	N	D	Annuel	
Ware, tool and cutlery manufacturers - Manufacturiers quincaillerie, d'outillage et de coutellerie.		1969	118.4	118.8	119.3	119.3	119.3	120.2	120.2	120.8	123.2	123.7	123.9	124.3	121.0
		1970	126.2	126.3	126.0	126.4	126.6	126.8	125.7	125.9	126.1	127.8	126.7	127.5	126.5
		1971	129.3	129.3	129.7	128.3	130.4	130.4	131.6	131.6	132.2	132.1	132.6	132.6	130.9
13 3060		1972	136.0	136.0	136.0	136.0	136.0	137.3	137.3	137.6	137.7	138.2	138.4	138.5	137.1
		1973	138.9	139.1	139.8	139.9	140.0	140.0	140.8	140.2					
Hardware, other builders' and shelf hardware - Quincaillerie bâtiment et rayonnage.		1969	119.5	119.5	122.4	122.4	122.4	122.4	122.4	125.6	125.6	125.6	127.1	123.1	
		1970	128.7	128.7	128.7	128.7	128.7	128.7	128.7	128.7	128.7	128.7	128.7	128.7	128.7
		1971	130.7	130.7	130.7	130.7	130.7	130.7	130.7	130.7	132.3	132.3	132.3	132.3	131.2
13 3060 012		1972	135.3	135.3	135.3	135.3	135.3	135.3	135.5	137.0	137.0	137.0	137.0	137.0	136.0
		1973	137.0	137.0	140.5	140.5	140.5	140.5	144.3	144.3					
Hardware, furniture and cabinet - Quincaillerie, meubles et classieurs.		1969	123.0	123.0	123.0	125.6	125.6	125.6	125.6	125.6	132.1	137.9	139.4	139.4	128.8
		1970	143.7	143.7	143.7	142.6	142.6	142.6	142.6	142.6	142.6	142.6	142.6	142.6	142.9
		1971	149.5	149.5	149.5	149.5	149.5	150.9	151.3	151.3	151.3	151.3	151.3	151.3	150.5
13 3060 014		1972	151.3	151.3	151.3	151.3	151.3	155.5	155.5	155.5	155.5	155.5	156.6	156.6	153.9
		1973	156.6	156.6	156.6	156.6	156.6	156.6	158.0	158.0					
Cellaneous allied products, all metal inc. but not restricted to cross armpins, pole steps, peavy and drive tools - Produits assimilés divers, tous métaux, y compris crochets de gaffe etc.		1969	107.1	108.2	110.2	110.3	110.3	110.3	110.8	110.8	110.8	112.0	116.1	120.2	111.4
		1970	125.6	125.6	125.6	125.6	126.5	126.5	126.5	126.5	126.5	126.5	126.5	126.3	126.2
		1971	128.5	131.2	131.2	131.2	131.2	131.2	131.2	131.2	131.2	131.2	132.2	133.2	131.2
13 3060 035		1972	133.2	133.2	133.2	133.2	133.2	133.2	133.2	133.2	133.2	133.2	137.5	143.2	134.4
		1973	143.3	143.3	147.0	149.0	153.3	155.3	155.3	155.3					
Cutting tools, drills, taps, bits, reamers, punches and threading dies - Autres outils de taille, foreuses, araudeuses, fleurets, aléveuses, poinçons et matrices - fileter.		1969	121.1	121.1	121.1	125.0	126.0	126.0	126.0	126.0	126.0	126.0	126.0	126.0	124.8
		1970	136.6	136.6	136.6	136.6	136.6	136.6	136.6	136.6	136.6	136.6	136.6	132.5	135.9
		1971	135.5	135.5	135.5	135.5	135.5	135.5	135.5	135.5	135.5	135.5	135.5	135.5	135.5
13 3060 044		1972	135.5	135.5	135.5	135.5	135.5	138.7	138.7	138.7	138.7	138.7	138.7	138.7	137.4
		1973	138.7	138.7	140.0	140.0	140.0	140.0	140.0	129.8					
Carpenters' and mechanics' hand tools, hammers - Outils de menuisiers et de mécaniciens, marteaux.		1969	119.8	119.8	119.8	119.8	119.8	119.8	121.3	127.3	127.3	127.3	127.3	127.3	123.0
		1970	128.5	130.5	130.5	132.2	132.2	132.2	132.2	132.2	132.2	132.2	132.2	132.2	131.6
		1971	133.8	133.8	135.8	135.8	135.8	135.8	135.8	135.8	135.8	135.8	135.8	135.8	135.5
13 3060 052		1972	142.2	142.2	142.2	142.2	142.2	142.2	142.2	142.2	142.2	142.2	142.2	142.2	142.2
		1973	132.8	137.0	137.0	137.0	137.0	137.0	137.0	137.0					
Carpenters' and mechanics' hand tools - Autres outils de menuisiers et de mécaniciens.		1969	119.9	119.9	119.9	119.9	119.9	119.9	120.3	125.1	125.1	125.1	125.1	125.1	122.1
		1970	128.2	130.0	130.0	132.4	132.4	132.4	132.4	132.4	132.4	132.4	132.4	132.4	131.6
		1971	134.2	134.2	136.5	136.5	136.5	136.5	136.5	136.5	139.0	139.0	139.0	139.0	137.0
13 3060 056		1972	141.6	141.6	141.6	141.6	141.6	141.6	141.6	141.6	141.6	141.6	141.6	141.6	141.6
		1973	146.1	146.1	146.1	146.1	146.1	146.1	146.1	146.1					
Saws for wood-cutting only, power driven, circular, inc. inserted tooth (blades only) - Scies à bois seulement, à moteur, circulaires, y compris à dents rapportées (lames seulement).		1969	121.1	126.2	126.2	126.2	126.2	126.2	126.2	126.2	126.2	126.2	126.2	126.2	125.8
		1970	124.1	124.1	124.1	126.2	128.6	130.4	130.4	130.4	130.4	130.4	130.4	130.4	128.3
		1971	130.4	130.4	130.4	134.7	134.7	134.7	144.3	144.3	144.3	144.3	144.3	144.3	138.4
13 3060 067		1972	144.3	144.3	144.3	144.3	144.3	144.3	144.3	144.3	144.3	144.3	144.3	144.3	144.3
		1973	149.0	149.0	149.0	149.0	149.0	149.0	149.0	149.0					
Equipment manufacturers - Fabricants d'appareils de tréfilage.		1969	106.9	107.5	107.8	107.8	107.8	107.8	107.8	107.8	107.8	107.4	107.4	107.6	107.6
		1970	110.1	110.3	110.5	110.5	110.5	111.6	111.9	111.9	111.9	111.5	111.5	111.5	111.1
		1971	112.0	112.5	113.1	113.9	113.9	113.9	113.9	113.8	113.8	113.8	113.8	113.8	113.5
13 3070		1972	114.8	115.9	116.8	116.8	116.8	116.9	116.9	117.3	117.3	117.3	117.3	117.3	116.8
		1973	118.0	118.5	118.9	119.2	119.2	118.8	118.8	119.2					
Boilers for warm air, designed exclusively for oil burning - calorifères à air chaud, conçus exclusivement pour le chauffage au mazout.		1969	97.8	98.4	98.4	98.4	98.4	98.4	98.4	98.4	98.4	98.4	98.4	98.4	98.4
		1970	104.4	104.4	104.9	104.9	104.9	104.9	105.8	105.8	105.8	105.8	105.8	105.8	105.3
		1971	106.1	106.1	106.2	106.2	106.2	106.2	106.2	105.1	105.1	105.1	105.1	105.1	105.7
13 3070 011		1972	105.1	106.5	107.0	107.0	107.0	107.0	107.0	107.0	107.0	107.0	107.0	107.0	106.8
		1973	107.0	108.5	109.7	109.7	109.7	109.7	109.7	109.7					
Boilers for furnaces and boilers, oil (power type) - Brûleurs pour calorifères et chaudières, à usage ménager.		1969	111.3	111.8	111.8	111.8	111.8	111.8	111.8	111.8	111.8	111.8	111.8	111.8	111.8

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES
 TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

1961 = 100														Annual
Industries and selected commodities(1)	Month - Mois													Annual
Industrie et certains produits(1)	J	F	M	A	M	J	J	A	S	O	N	D	Annuel	
Industry selling price index manufacturing (5) - Indice des prix de vente dans l'industrie, industries manufactu- rières(5)	1969 114.5	115.0	115.6	115.9	116.3	116.7	116.4	116.6	116.8	117.2	117.2	118.1	116.3	
	1970 119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.9	118.8	119.1	
	1971 119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6	
	1972 124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4	
	1973 133.0	134.5	136.5	138.0	139.4	141.0	142.8	147.8						

- (1) Indexes for 1972 and 1973 are subject to revision - Les indices pour 1972 et 1973 sont sujets à révision.
 (2) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - À compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.
 (3) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series	New series
	Ancienne série	Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

- (4) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
 (5) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

ALL-ITEMS Consumer Price Index Converted to 1949=100 - August 1973 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Août 1973 197.7

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

TABLE 9. Consumer Price Indexes for Canada - Main Groups and Selected Components and Items(1)

TABLEAU 9. Indices des prix à la consommation, Canada - Groupes principaux, éléments et articles choisis(1)
(1961=100)

	Aug. 1973 Août	July 1973 Juill.	Aug. 1972 Août	July 1972 Juill.	1972	1971	1970
All-items - Indice d'ensemble	153.0	151.0	141.3	140.2	139.8	133.4	129.7
Food - Aliments	168.7	163.5	145.7	142.5	141.4	131.4	130.0
Food for home consumption - Aliments consommés à la maison	165.3	160.2	142.2	138.6	137.5	127.4	126.8

Shortening - Graisse végétale	131.0	127.1	123.3	123.4	121.8	118.7	114.1
Salad/cooking oil(2) - Huile à frire ou de table(2)	102.1	100.7
Salad dressing - Vinaigrette	113.1	110.8	108.6	111.0	109.9	105.4	104.7
Meat, poultry and fish - Viande, volaille et poisson	194.6	180.3	151.7	150.1	147.7	130.9	133.7
Meat - Viande	194.2	179.4	151.8	149.9	147.5	131.2	135.8
Beef - Boeuf	204.3	194.1	161.5	160.2	157.6	144.3	140.7
Sirloin steak - Bifteck de surlonge ..	196.0	183.9	162.5	160.4	152.4	143.4	139.7
Round steak - Bifteck dans la ronde ..	208.3	200.4	159.7	160.5	160.4	148.0	127.4
Prime rib roast - Rôti de côtes de choix	195.4	183.6	159.6	157.0	154.3	139.9	114.1
Blade roast - Rôti de palette	189.4	181.7	151.1	149.7	148.9	133.1	133.5
Stewing beef - Boeuf pour ragoût	194.3	185.7	159.4	158.2	157.3	145.9	142.1
Hamburg - Boeuf haché	231.5	220.0	173.7	170.2	170.4	148.5	144.8
Liver - Foie	173.6	168.5	140.5	142.7	134.8	119.1	132.3
Pork - Porc	183.1	158.6	138.5	134.6	132.4	109.6	128.1
Bacon(3) - Bacon(3)	171.4	141.1	125.5	118.8	115.8	88.8	118.8
Smoked ham(4) - Jambon fumé(4)	170.1	147.4	127.5	126.7	125.7	110.7	128.9
Cottage Roll - Roule de haut d'épaule	187.2	169.4	140.3	136.9	135.0	110.9	127.0
Loin cuts - Coupes de longe	205.7	180.4	161.5	156.3	153.0	122.7	137.2
Shoulder cuts - Coupes d'épaule	192.8	160.3	132.7	129.5	128.0	102.4	120.5
Sausages - Saucisses	169.0	159.6	134.8	131.7	130.9	119.6	127.2
Other meat - Autres viandes	184.1	174.0	148.8	148.6	146.6	133.1	135.6
Wieners - Saucisses de Francfort	167.0	156.0	129.6	130.2	127.8	119.0	121.5
Veal - Veau	232.3	225.6	194.0	192.0	189.9	165.0	162.6
Canned meat - Viandes en conserve	150.4	145.0	122.0	121.3	123.3	123.0	130.7
Poultry - Volaille	176.3	163.9	126.0	127.3	124.6	108.9	105.8
Chicken - Poulet	181.9	169.0	129.8	131.5	128.9	112.0	107.7
Turkey - Dinde	149.5	139.1	110.0	108.8	105.4	95.8	99.1
Fish - Poisson	218.3	209.2	185.3	182.6	180.5	157.0	150.6
Canned salmon - Saumon en boîte	169.5	159.5	146.9	146.3	149.0	143.0	144.1
Canned tuna(2) - Thon en boîte(2)	111.2	105.2
Eggs - Oeufs	149.7	132.0	102.3	96.0	94.7	87.3	99.0
Fruit and vegetables - Fruits et légumes ...	188.6	195.0	146.1	147.1	139.8	130.5	126.8
Fresh fruit - Fruits frais	202.1	203.4	148.8	152.4	143.2	132.7	116.0
Oranges - Oranges	115.7	114.7	103.3	103.5	104.4	111.9	102.5
Bananas - Bananes	98.4	93.7	72.8	79.7	79.3	76.2	85.7
Apples - Pommes	209.4	196.1	154.1	134.4	132.6	118.8	112.8
Grapefruit - Pamplemousses	207.3	172.6	184.5	176.7	153.4	154.8	140.9
Processed fruit - Fruits traités	143.6	141.8	127.7	126.4	127.6	122.7	125.5
Canned peaches - Pêches en conserve	157.4	158.8	140.6	139.8	140.8	135.5	139.0
Canned pears - Poires en conserve	132.6	132.6	124.1	124.5	124.5	120.7	123.7
Canned apple sauce(2) - Compote de pommes en conserve(2)	105.4	103.7
Canned apple juice(3) - Jus de pommes en conserve(3)	137.5	134.8	130.2	123.7	122.0	110.4	117.2
Canned orange juice - Jus d'oranges en conserve	112.2	112.3	113.7	113.8	115.0	108.9	108.6
Raisins - Raisins secs	219.4	201.9	151.5	148.5	153.4	150.2	153.0
Fresh vegetables - Légumes frais	218.9	237.7	159.8	159.9	147.0	135.0	138.4
Potatoes - Pommes de terre	319.1	317.8	163.7	153.8	128.2	114.7	134.0
Tomatoes - Tomates	214.5	205.3	166.0	178.6	167.5	162.2	143.7
Lettuce - Laitue	157.6	258.6	146.3	142.7	162.9	160.8	139.9
Carrots - Carottes	162.0	155.5	135.8	135.6	124.9	123.4	109.1
Celery - Céleri	198.0	189.0	144.8	157.7	164.2	141.6	150.3
Onions - Oignons	248.9	256.4	228.4	217.0	157.9	128.5	157.4
Cabbage - Choux	184.2	265.5	144.6	166.6	171.9	150.4	167.4
Turnips - Navets	226.1	257.7	196.0	193.9	154.2	125.1	171.0

Transportation services - Transports	181.8	178.3	176.9	174.8	174.8	168.1	160.0

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes for current year are subject to revision. Les données de l'année courante sont sujettes à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

- (1,2) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
- (2) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contract profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.
- (3) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (4) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (5) Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

(1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.

(4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

TABLE 26. Price Indexes of Electric Utility Construction, Canada, Annually 1958 Forward

TABLERAU 26. Indices des prix de la construction dans les services d'électricité, Canada, par année depuis 1958

1961=100

	Year - Année							
	1958	1959	1960	1961	1962	1963	1964	1965
Distribution systems - Total(3) -								
Réseaux de distribution	93.2	96.8	100.3	100.0	101.8	102.5	104.6	107.1
Construction - Construction	93.5	96.3	98.5	100.0	102.5	105.2	107.7	112.3
Equipment - Matériel	92.5	97.9	104.3	100.0	100.4	96.4	97.6	95.4
Transmission lines - Total(3) - Lignes de transmission	95.7	97.0	98.9	100.0	100.9	102.3	102.7	108.5
Transformer stations - Total(3) - Postes de transformation	109.0	113.5	109.8	100.0	105.1	107.6	112.0	118.0
Structures and improvements - Installations et améliorations	101.3	102.6	103.3	100.0	102.6	108.9	112.9	122.0
Equipment - Matériel	118.4	123.2	115.7	100.0	105.9	107.3	111.9	117.4
Hydro-electric generating stations(4) - Centrales d'énergie hydro-électrique(4)				100.0	102.7	106.1	109.6	115.0

	1966	1967	1968	1969	1970	1971	1972p
Distribution systems - Total(3) -							
Réseaux de distribution	112.4	116.1	115.6	120.3	129.3	133.8	139.9
Construction - Construction	118.4	125.3	126.3	133.0	144.5	149.6	158.2
Equipment - Matériel	99.0	95.7	91.8	91.8	95.4	98.6	99.1
Transmission lines - Total(3) - Lignes de transmission	113.0	118.7	121.9	127.5	136.5	141.4	147.2
Transformer stations - Total(3) - Postes de transformation	122.4	121.2	117.2	120.4	132.5	139.2	142.8
Structures and improvements - Installations et améliorations	130.2	126.9	124.2	131.6	139.2	143.7	149.4
Equipment - Matériel	120.4	115.1	106.7	106.1	119.4	124.8	125.4
Hydro-electric generating stations(4) - Centrales d'énergie hydro-électrique(4)	122.1	126.5	131.6	139.5	148.3	155.2	164.5

(1) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service bulletin, 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des prix dans la construction, no 62-006 au catalogue.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières, par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) For further detailed explanation see occasional paper 62-526. - Pour plus de renseignements, voir le bulletin hors série No 62-526 au catalogue.

(4) For further detailed explanation see occasional paper 62-533. - Pour plus de renseignements, voir le bulletin hors série No 62-533 au catalogue.

TABLE 27. Price Indexes for Machinery and Equipment
TABLEAU 27. Indices des prix des machines et du matériel

	Implicit price index (business gross fixed capital formation)(1)	Construction machinery and equipment - Machines et matériel de construction		Forestry East of the Rockies - Forestier à l'est des Rocheuses
	Indices implicites de prix (formation brute de capital fixe)(1)	Arithmetically converted to - Arithmétiquement converti à		
	1961=100	1961=100	1968=100(2)	1968=100(3)
1961	100.0	100.0	78.2	
1962	103.3	105.6	82.6	
1963	106.1	108.4	84.8	
1964	110.4	111.6	87.3	
1965	114.7	114.1	89.2	
1966	118.5	117.8	92.1	
1967	117.7	121.1	94.7	
1968	117.6	127.9	100.0	100.0

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix ainsi que d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles sont recueillies des statistiques sur les expéditions de produits, l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée en: "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de mouture et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

II. The concept of price change measured is net return to

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western wheat used in the index prior to August 1972, are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Northern at Thunder Bay. From August 1972 forward, prices used are for Nos. 1 and 2 C.W. Red Spring 14% at Thunder Bay. Prices for western oats and barley are also supplied by the Wheat Board. Initial payments are first used in the index calculation and are revised if further payments are announced.

Final payments for the crop year August 1971 - July 1972 were announced on February 13, 1973 for wheat and oats. No final payment was granted for barley.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. À compter du 1er août 1972, les prix utilisés sont ceux du blé rouge de printemps, nos 1 et 2 (14%) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1971 à juillet 1972 ont été annoncés le 13 février 1973, en ce qui concerne le blé et l'avoine. Il n'y a pas eu de dernier paiement pour l'orge.

Used in original indexes from Aug. 1971 to July 1972. - Utilisé dans les premiers indices d'août 1971 jusqu'en juillet 1972.

Incorporated retroactively in revised final indexes Aug. 1971 to July 1972. - Inclus rétroactivement dans les indices finals révisés d'août 1971 à juillet 1972.

Used in Indexes Aug. 1972 to July 1973. - Utilisé dans les indices d'août 1972 jusqu'en juillet 1973.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

30

$$\sqrt[30]{\frac{P^1}{tN} \times \frac{P^2}{tN} \times \frac{P^3}{tN} \times \dots \times \frac{P^{30}}{tN}}$$

30

$$\sqrt[30]{\frac{P^1}{t \ 35-39} \times \frac{P^2}{t \ 35-39} \times \frac{P^3}{t \ 35-39} \times \dots \times \frac{P^{30}}{t \ 35-39}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de définir exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

30

$$\sqrt[30]{\frac{P^1}{tN} \times \frac{P^2}{tN} \times \frac{P^3}{tN} \times \dots \times \frac{P^{30}}{tN}}$$

30

$$\sqrt[30]{\frac{P^1}{t \ 35-39} \times \frac{P^2}{t \ 35-39} \times \frac{P^3}{t \ 35-39} \times \dots \times \frac{P^{30}}{t \ 35-39}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

RETAIL PRICE INDEXES

The Consumer Price Index for Canada (1961 = 100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there is a continually measurable market price over time."

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961 = 100 from 1949 = 100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949 = 100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961 = 100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise

INDICES DES PRIX DE DÉTAIL

L'indice des prix à la consommation pour le Canada (1961 = 100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantités de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949 = 100 à 1961 = 100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949 = 100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961 = 100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments

Index. In it, all items in the C.P.I. have been reclassified to two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 no. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services

l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt *dans chaque ville* le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent,

that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is \$90.91 ($(100.0/110.0) \times 100$), which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cent ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (Tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des salaires moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surevaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surevaluation peut être réduite en réduisant le chiffre de \$100.00 du montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91 ($(100.0/110.0) \times 100$), que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 10% rise in money wages $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98 $((146.23/142.0) \times 100)$. (The wage and the price index both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, wage data adjusted by the consumer price index (which is a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce earnings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du

“take-home” pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971

revenu disponible en raison de facteurs tels que l'évolution l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes qui comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherches. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons de prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour des mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969 et avril 1972 de *Prix et indices des prix* (no 62-002, catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains de prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail de même type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées

the data, the updating of these measurements of inter-city price differentials was accomplished by application of relative movement of prices, at the item level in each city, for the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the prices covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, the Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replace the Composite Index Exclusive of Living Component from 1961 forward.

directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the *Globe and Mail* and the *Montreal Gazette*. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of price in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new subgroups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

Le bulletin hors série *Farm Input Price Indexes, 1961=100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (no 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961=100* (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour. On a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un investisseur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture à la Bourse du jeudi indiqués dans le *Globe and Mail* et dans le *Montreal Gazette*. Pour les actions privilégiées, les prix sont des moyennes pondérées mensuelles. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâte et papier, huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des lignes a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe des banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient auparavant limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent d'être basés sur les actions en circulation.

For the list of stocks currently included in the Investment Index and Preferred Index, see *Prices and Price Indexes* February 1973.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators⁽¹⁾ providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI item⁽²⁾. The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining components with the weights as shown will not provide a composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of *Prices and Price Indexes* (62-002). This index is found in Table 20 of *Prices and Price Indexes* (62-002). Full trade detail, by city, is published

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de février 1973.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices-and-Price-Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement⁽¹⁾ des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.⁽²⁾. Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication

⁽¹⁾ Gross National Product Division, Statistics Canada.

⁽²⁾ *Indices des prix de vente dans l'industrie, 1956-1968*, no 62-528 au catalogue.

quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously

Prix et indices des prix (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. Ces taux sont publiés sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyennant les données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les salaires moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux de métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses propres

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer les prix de travaux de routes effectués précédemment

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

pleted roadwork, and as historical measurements of price levels in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but they can be used to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place, such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as cement pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by determining characteristics of the contracts and the bids, such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and operating electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structures would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. Such uses of the indexes introduced in this publication have few short-comings. Nonetheless, they may be helpful for purposes provided the users understand the deficiencies. The reader is asked to make particular note of Section 6 of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular project, the user should consider selecting appropriate com-

ponents, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent

ponent indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and right-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, des lignes de transport d'énergie, de postes de transformation ou de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses de main-d'œuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation, les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité municipal" englobe aussi bien les services municipaux que les services non municipaux. Toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation ou qui peuvent également vendre de l'électricité ont été exclus de l'indice.

Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which is described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Indexes of Machinery and Equipment

In response to the need of users wishing either to select expenditure data of machinery and equipment for change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100. Most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were fully supplied by major purchasers.

Conceptually purchasers' prices should be utilized in the indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and general sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Revision collections from manufacturers most of whom reside in the United States.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et delui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

Industry Selling Price Index: Manufacturing
(1961=100)

The industry selling price index for total manufacturing declined in September by 0.3% to 147.4 from its August level of 147.8. It was 14.7% higher than the September 1972 index of 128.5. Of the 102 industry indexes included in the total, 65 were higher, 11 declined, and 26 were unchanged.

The more notable increases were 2.2% (particularly in yarn and cloth mills, 4.9%), 1.7% in men's clothing, 1.5% in the furniture and 1.2% in wood groups, 1.4% in the paper industries group (particularly corrugated box manufacturers, 8.2%), 1.8% in the petroleum and coal group, and 1.8% in bakeries. The increases were more than offset by decreases in the food and beverages group (-3.3%), (particularly slaughtering and meat packing, -10.2%), flour mills (-12.5%), and vegetable oil mills (-43.3%). The decline in flour mills followed on a sharp advance of 57.5% in the month of August.

Indice des prix de vente dans l'industrie: Industries
manufacturières (1961=100)

L'indice des prix de vente dans l'industrie (industries manufacturières totales) a décliné de 0.3% en septembre, passant de 147.8 qu'il était en août à 147.4. Il est 14.7% plus élevé qu'en septembre 1972 alors que l'indice était de 128.5. Parmi les 102 indices d'industrie inclus dans le total, 65 étaient plus élevés, 11 ont décliné et 26 sont restés inchangés.

Les accroissements les plus remarquables sont survenus dans les groupes des textiles (2.2%), et particulièrement dans les filés et tissus de coton, 4.9%, des vêtements d'homme (1.7%), des meubles (1.5%) et du bois (1.2%), dans le groupe des industries du papier (1.4%), particulièrement les manufacturiers de boîtes de carton ondulé (8.2%), dans le groupe du pétrole et du charbon (1.8%), et dans les boulangeries (12.8%). Les accroissements furent plus qu'annihilés par les décroissements dans le groupe des aliments et boissons (-3.3%), particulièrement l'abattage de bétail et la préparation de la viande (-10.2%), les moulins à farine (-12.5%), et les industries des huiles végétales (-43.3%). Le déclin survenu dans les moulins à farine faisant suite à une croissance brutale de 57.5% au mois d'août.

General Wholesale Index (1935-39=100)

The general wholesale index declined 0.7% in September to 400.0 from the revised August index of 402.7. It was 27.4% higher than the September 1972 index of 313.9. Four of the eight major group indexes were lower, while four advanced.

The animal products group index moved 4.9% lower in September to 492.3 from 517.9 on price decreases for animal oils and fats, fresh and cured meats (beef down 9.7%, pork 18.8%), hides and skins, and livestock (steers 4.9%, hogs 15.6%). The vegetable products group index moved 1.2% lower to 410.2 from 415.3 on lower prices for potatoes, vegetable oil and its products, onions, and milled cereal foods, including a decline of 12.5% in the price of flour.

A decline of 0.5% to 336.8 from 338.5 in the non-ferrous metals products group index reflected lower prices for copper and its products, silver and tin. The chemical products group index declined 0.2% to 264.4.

The textile products group index moved up 5.1% to 353.1 on higher prices for raw cotton, cotton yarns, miscellaneous cotton products, cotton fabrics and worsted yarns. An advance of 1.1% to 257.9 in the non-metallic minerals products group index reflected price increases for asbestos, asphalt, coke and plaster. Smaller advances were recorded in two major group indexes: wood products to 508.3 from 504.8, and iron products to 360.5 from 358.3.

The following table lists the Total Index and component groupings for specified dates:

L'indice générale des prix de gros

L'indice générale des prix de gros (1935-39=100), décliné de 0.7% en septembre, passant de l'indice révisé de 402.7 en août à 400.0. C'était une augmentation de 27.4% par rapport à l'indice de septembre 1972, qui était de 313.9. Quatre des huit indices de groupe majeur étaient plus bas, alors que les quatre autres ont avancé.

L'indice de groupe des produits animaux s'est déplacé 4.9% vers le bas en septembre, passant de 517.9 à 492.3. Ceci est dû à des décroissements de prix pour les huiles et graisses animales, pour les viandes fraîches et salées (le bœuf -9.7% et le porc -18.8%), pour les cuirs et les peaux vertes et pour le bétail (bovillon -4.9% et le porc -15.6%). L'indice de groupe des substances végétales est descendu de 1.2%, passant de 415.3 en août à 410.2, à cause de prix plus bas pour les pommes de terre, l'huile végétale et ses produits, les oignons, les céréales de table, incluant un déclin de 12.5% dans le prix de la farine.

Le déclin de 0.5%, soit de 338.5 à 336.8, dans l'indice de groupe des produits métalliques non ferreux, reflétait l'abaissement dans les prix de cuivre et de ses dérivés, de l'argent et de l'étain. Un déclin de 0.2% est également survenu dans l'indice de groupe des produits chimiques, passant de 265.0 à 264.4.

L'indice de groupe des produits textiles s'est déplacé 5.1% vers le haut, passant de 336.1 à 353.1. Ceci dû à des prix élevés pour le coton brut, les filés de coton, et les produits de base de coton; pour les tissus de coton et pour les filatures laineuses. Un accroissement de 1.1%, passant de 255.2 à 257.9 dans l'indice de groupe des produits minéraux non métalliques, reflétait des accroissements de prix pour l'amiante, l'asphalte, le coke et le plâtre. Des progrès ont été également enregistrés, quoiqu'à un degré moindre, dans deux indices de groupe majeurs: les produits du bois, passant de 504.8 à 508.3, et dans les produits de l'acier, passant de 358.3 à 360.5.

Le tableau ci-dessous présente l'indice générale et les indices des éléments pour des dates déterminées:

	Sept.*	Aug.*	Sept.	Aug.	% Change

*These indexes are preliminary. - Ces indices sont provisoires.

urity Price Indexes (1961=100)

The index of common stock prices rose 1.1% to 189.2 in September. Of the three major groups, industrials advanced 1.3% to 205.9, utilities dropped by 0.9% to 137.4 and the finance index increased 1.7% to 181.3. Among the thirteen industrial sub-groups, the pulp and paper increased 9.1% (154.2) and the food registered the largest decrease of 4.5% (142.4). In the utilities, an increase of 4.7% in electric power (110.8) practically offset a decrease in other sub-groups. Banks advanced approximately 1.9% to 214.8 while investment and loan companies increased 1.2% to 128.6 resulting in an increase in the finance index.

In the same period, the index of mining stock prices declined 4.2% to 131.4; golds and base metals slowed down and declined 1.7% to 157.7 and 118.1 respectively.

Of the two supplementary price indexes, a decline of 1.7% to 239.4 was recorded in uranium while primary oil and oil products dropped 1.7% to 454.4.

The preferred stock index declined 1.7% from 71.8 in August to 70.6 in September.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets declined 5.6% to 397.7 in September from the August index of 421.1. A decrease of 5.9% to 267.2 from the July index in the field products index reflected lower prices for apples on both Eastern and Western markets, and for flax in the West. Higher prices were recorded for rye on both coasts, for oats, wheat and corn in the East and hay in the West. The Animal products index moved down 5.4% to 528.1 from 558.3 on price decreases for hogs, steers and calves on both coasts and for lambs in the West. Price increases were recorded for cheesemilk and lambs in the East, and fluid milk in the West.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, declined 3.2% to 419.7 in September from the revised August index of 419.7. Prices were lower for eight commodities, higher for six and unchanged for sixteen. Principal changes included decreases for seed oil, oats, hogs, raw rubber, beef hides, cottonseed oil and steers, while increases were recorded for domestic lumber, spruce lumber, raw cotton and raw sugar.

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours de placement des actions ordinaires a augmenté de 1.1% en septembre pour s'établir à 189.2. Parmi les trois grands groupes, les valeurs industrielles ont progressé de 1.3% pour se fixer à 205.9, les services publics ont baissé de 0.9% pour s'établir à 137.4, et les finances ont augmenté de 1.7% pour atteindre 181.3. Parmi les treize sous-groupes industriels, une hausse de 9.1% est à signaler dans les pâtes et papier (154.2) alors que la plus importante diminution a été de 4.5% pour les aliments (142.4). Dans le cas des services d'utilité publique, une hausse de 4.7% dans les valeurs de l'énergie électrique (110.8) compense pratiquement la diminution des autres sous-groupes. L'augmentation de l'indice des finances est attribuable à un gain des valeurs bancaires de l'ordre de 1.9% pour s'établir à 214.8 alors que les placements et prêts gagnaient 1.2% pour atteindre 128.6.

Au cours de la même période, l'indice du cours des titres miniers a diminué de 4.2% pour se fixer à 131.4; l'or et les métaux communs ont diminué de 7.4% et 1.7% pour se fixer à 157.7 et 118.1 respectivement.

Pour ce qui est des deux indices supplémentaires l'uranium a diminué de 4.1% pour s'inscrire à 239.4 et le pétrole et le gaz primaires ont fléchi de 1.7% pour s'établir à 454.4.

L'indice des actions privilégiées a baissé de 1.7% tombant de 71.8 en août à 70.6 en septembre.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a diminué de 5.6%, passant de 421.1 en août à 397.7 en septembre. La baisse de 5.9% de l'indice des prix des grandes cultures (qui est passé de 283.9 à 267.2) est attribuable à une diminution du prix des pommes de terre sur les marchés de l'Est et de l'Ouest et du lin dans l'Ouest. On a observé une augmentation du prix du seigle sur les deux marchés, de l'avoine, du blé et du maïs dans l'Est et du foin dans l'Ouest. L'indice des produits d'origine animale a baissé de 5.4%, passant de 558.3 à 528.1, en raison d'une diminution du prix des porcs, des bouvillons et des veaux sur les deux marchés et des agneaux dans l'Ouest. On a observé une hausse du prix du lait de fromagerie et des agneaux dans l'Est, et du lait liquide et des oeufs dans l'Ouest.

Indice des prix de trente produits industriels (1935-39=100)

L'indice des prix de trente produits industriels, calculé comme une moyenne géométrique non pondérée, a diminué de 3.2%, passant de 419.7 en août (indice rectifié) à 406.2 en septembre. Les prix de huit produits ont baissé, ceux de six produits ont monté et ceux de seize produits sont demeurés stationnaires. Au nombre des principales variations, on compte une baisse du prix de l'huile de graine de lin, de l'avoine, des porcs, du caoutchouc non traité, des peaux de boeuf, de l'huile de coton et des bouvillons, et une hausse du prix du blé, des sciages d'épicéa, du coton brut et du sucre brut.

Farm Input Price Indexes (1961=100) 3rd Quarter 1973

The farm input price index for Canada rose 7.3% in the 3rd quarter of 1973, moving to 170.7 from a 2nd quarter level of 159.1. The Eastern index increased to 179.9 from 163.8, or 9.8%, while the Western index rose to 160.1 from 153.7 or 4.2%. The yearly increase since 3rd quarter 1972 was 20.1% for Canada, 26.6% for the East, and 12.7% for the West.

Livestock feed prices rose 25.8% in the 3rd quarter and this large increase accounted for approximately 65% of the total advance of 7.3%. Since 3rd quarter 1972 feed prices have risen 75%. The sharply higher increase in the Eastern index results from the fact that in the 1958 weighting diagram, feed accounted for 13% of the Eastern farm inputs, while in the Western index it accounted for only 2.7% of all inputs.

Higher prices for feeder cattle (14.7%), hired labour (5.1%), motor vehicle operation (2.9%) and building materials also contributed to the rise in the total index.

Indices (1961=100) des prix des entrées dans l'agriculture trimestre 1973

L'indice des prix des entrées dans l'agriculture du Canada a augmenté de 7.3% au troisième trimestre de 1973, passant de 159.1 au deuxième trimestre à 170.7. L'indice pour l'Est est passé de 163.8 à 179.9, ce qui représente une hausse de 9.8%, tandis que l'indice pour l'Ouest est monté de 153.7 à 160.1, ce qui représente une hausse de 4.2%. L'augmentation annuelle par rapport au troisième trimestre de 1972 a été de 20.1% pour le Canada, de 26.6% pour l'Est et de 12.7% pour l'Ouest.

Les prix des aliments pour animaux ont connu une hausse de 25.8% au troisième trimestre et cette forte augmentation représenté environ 65.0% de la hausse totale de 7.3%. Les prix des aliments pour animaux ont augmenté de 75.0% depuis le troisième trimestre de 1972. L'augmentation beaucoup plus forte de l'indice de l'Est provient du fait que, dans l'échelle de pondération de 1958, les aliments pour animaux représentaient 13.0% des entrées dans l'agriculture dans l'Est, tandis que dans l'indice de l'Ouest ils représentaient 2.7% seulement de l'ensemble des entrées.

L'augmentation des prix des bovins d'engraissement (14.7%), de la main-d'oeuvre salariée (5.1%), de l'utilisation des véhicules automobiles (2.9%) et des matériaux de construction également contribué à la hausse de l'indice total.

Consumer Price Movements

The Consumer Price Index for Canada (1961=100) rose 0.6% to 153.9 in September from 153.0 in August with a major components registering increases. Food prices advanced 0.9%, while the level of prices for All-Items other than Food moved up, for the fourth consecutive month, by 0.5%. Among the non-food components, the Clothing index climbed 0.8%, the Transportation index moved up 0.6% and the Housing index rose 0.5%. The elements for Health and Personal Care and for Recreation, Education and Reading each increased by 0.2%, while that for Tobacco and Alcohol advanced by 0.1%. Between September 1972 and September 1973, the All-Items Index advanced 8.5%.

The Food index increased 0.9% to 170.2 in September from 168.7 in August with about half of the rise being attributable to a 3.1% advance in the price of food eaten away from home. The price level of food for home consumption moved up in the latest month by 0.5% despite marked seasonal price declines for fresh produce. The impact of higher wheat quotations was reflected in retail outlets by a sharp one-month increase of 8.9% in the level of prices for cereal and bakery products, with bread prices registering an advance of 17% and flour and macaroni increasing by 10% and 6.2%, respectively. The dairy products index rose 1.2%, largely on account of higher fresh milk prices in most provinces except Quebec and Ontario. The price of margarine, which was relatively stable over the preceding three months, moved up by 4% in the latest month. Each element of the meat, fish and poultry index contributed to its one-month rise of 4.7%. In meats, pork prices advanced 6.1% in the latest month to a level 37.1% above September 1972. Beef prices, on average, rose 2.8% in the latest month and stood 24% above their level of twelve months earlier. Poultry prices climbed 5.2% between August and September and were 47.6% higher than in September 1972. Canned salmon, in the latest month, registered a price rise of nearly 17%. Egg prices continued to climb, moving up by 6.8% in the latest month and by 50% since twelve months earlier. In contrast to these increases, fresh vegetable prices which normally decline between August and September registered a greater than usual drop of over 36%, with some items such as tomatoes and onions retailing, on average, below their price levels of twelve months earlier. Fresh fruit quotations likewise were seasonally lower since the preceding month, moving down 8%. In the twelve months since September 1972, the Food Index advanced 16.0% with the price of food consumed at home rising 16.1% and that for food away from home by 13%.

The Housing index rose 0.5% to 154.4 in September from 153.6 in August as a result of increases of 0.5% in both shelter and household operation components. Within shelter, the homeownership element moved up 0.7% in response to increases in the indexes for new houses, home-owner repairs and mortgage interest; rents rose 0.1%. Among elements of household operation, fuel oil prices increased in a number of cities in Ontario, Manitoba, Saskatchewan and British Columbia. Furniture quotations rose, on average, 0.7% mainly in response to increases in some centres for living-room and dinette furniture. Appliance prices advanced 0.3%, and among other home furnishings, floor coverings and

Mouvement des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961=100) est passé de 153.0 en août à 153.9 en septembre, soit une augmentation de 0.6%, et tous les éléments principaux ont enregistré des augmentations. Le prix des aliments a avancé de 0.9%, tandis que le niveau des prix pour l'indice d'ensemble à l'exception des aliments a monté le quatrième mois de suite de 0.5%. Parmi les éléments autres que les aliments, l'indice de l'habillement a grimpé de 0.8%, l'indice des transports, de 0.6% et celui de l'habitation, de 0.5%. Les indices de l'hygiène et des soins personnels ainsi que ceux des loisirs, de la formation et de la lecture ont tous augmenté de 0.2% tandis que celui des tabacs et alcools a avancé de 0.1%. De septembre 1972 à septembre 1973, l'indice d'ensemble a avancé de 8.5%.

L'indice des aliments a augmenté de 0.9%, passant de 168.7 en août à 170.2 en septembre; environ la moitié de cette augmentation est attribuable à une hausse de 3.1% des prix des repas pris à l'extérieur. Le niveau du prix des aliments consommés à la maison a augmenté de 0.5% le mois dernier malgré des baisses saisonnières sensibles des prix des produits frais. L'impact de la hausse du prix du blé s'est fait sentir aux points de vente de détail par une très forte augmentation d'un mois de 8.9% du niveau des prix des céréales et des produits de boulangerie; le prix du pain a augmenté de 17%, ceux de la farine et du macaroni, de 10% et 6.2% respectivement. L'indice des produits laitiers a accusé une hausse de 1.2%, attribuable surtout à l'augmentation des prix du lait frais dans la plupart des provinces à l'exception du Québec et de l'Ontario. Le prix de la margarine, relativement stable au cours des trois mois précédents, a augmenté de 4% au cours du dernier mois. Chaque article des indices de la viande, du poisson et de la volaille a contribué à la hausse mensuelle de 4.7%. Dans les viandes, le prix du porc a avancé de 6.1% au cours du dernier mois pour atteindre un niveau de 37.1% au-dessus de celui de septembre 1972. Le prix du bœuf a augmenté en moyenne de 2.8% au cours du dernier mois et dépasse de 29.4% le niveau de 1972. Le prix de la volaille a grimpé de 5.2% d'août à septembre et dépasse de 47.6% celui de septembre 1972. Le saumon en boîte a enregistré au cours du dernier mois une hausse de près de 17%. Le prix des oeufs a continué de monter, en enregistrant une hausse de 6.8% au cours du dernier mois et de 50% au cours des douze derniers mois. Par opposition à ces augmentations, le prix des légumes frais, qui baisse habituellement de août à septembre, a enregistré une diminution inhabituelle de plus de 36%; certains articles comme les tomates et les oignons se vendaient en moyenne au détail à des prix inférieurs à ceux de l'an dernier. Les prix des fruits frais étaient, à cause de la saison, plus bas que ceux du mois d'août, diminuant de 8%. Au cours des douze mois écoulés depuis septembre 1972, l'indice des aliments a avancé de 16.0%; le prix des aliments consommés à la maison est monté de 16.1% et celui des repas pris à l'extérieur, de 15.3%.

L'indice de l'habitation a augmenté de 0.5%, passant de 153.6 en août à 154.4 en septembre, en raison des augmentations de 0.5% des éléments logement et dépenses de ménage. Pour ce qui est de l'indice du logement, l'élément propriété a avancé de 0.7% par suite de la hausse des indices des maisons neuves, des réparations à la charge du propriétaire et de l'intérêt hypothécaire; les loyers ont augmenté de 0.1%. Parmi les articles qui composent les dépenses de ménage, le prix de l'huile à chauffage a monté dans certaines villes en Ontario, au Manitoba, en Saskatchewan et en Colombie-Britannique. Le prix de l'ameublement a augmenté en moyenne de 0.8% en raison surtout des augmentations enregistrées dans certaines villes des prix de l'ameublement de salle de

dishes were higher in price. The household supplies index advanced 1.2% as most items surveyed registered increases. Between September 1972 and September 1973, the Housing index advanced 7.1%.

The Clothing index, which normally moves up in September, advanced 0.8% to 139.5 from its level of 138.4 in August. All major clothing components recorded increases but the main contributors to this latest advance were men's and women's clothing and clothing services. A rise of 1.3% and 0.6% in the men's and women's wear indexes, respectively, resulted from advances in most items surveyed but the largest increases were recorded for items of men's outer wear and women's and men's sports and casual wear. The clothing services component rose, on average, 1.9% following increased quotations in a number of centres for laundry, dry-cleaning and shoe repairs. The index for children's clothing advanced 0.5% but nevertheless stood 2.2% below its level of a year earlier. Higher quotations for cotton and cotton blend fabrics were the main reason for an increase of 0.6% in the piece goods index between August and September. Footwear prices rose, on average, 0.4% as most items surveyed recorded increases. In the twelve-month period ending September 1973, the Clothing index rose 5.4%.

The Transportation index advanced 0.6% to 139.6 in September from 138.7 in August mainly as the result of a rise of 1.5% in the automobile operation and maintenance component. Widespread price increases were recorded for gasoline which climbed, on average, 2.7% in the latest month and 11.4% since last May. In addition, automobile repair charges rose in most centres and motor oil and battery quotations increased in a number of cities. Tire prices, on the other hand, were generally lower. New car quotations fell 0.3% as the model year drew to a close. The public transportation component remained unchanged as a marginal increase in the index for local transportation was offset by a decline in the train fares index. In the twelve month period ending September 1973, the Transportation index rose 3.9%.

The Health and Personal Care index rose 0.2% to 157.8 in September from 157.5 in August as a result of fractionally increased price levels for pharmaceuticals and for personal care supplies. In the latest twelve months the Health and Personal Care index advanced 5.2%.

The Recreation, Education and Reading index increased 0.2% to 147.2 in September from 146.9 in August as increases were recorded in the recreation and the reading components. Within recreation, higher quotations for television repairs and phonograph records outweighed price reductions for television sets and stereo combinations. The reading component rose in response to higher newspaper subscription rates in Quebec City. In the twelve months to September 1973, the Recreation, Education and Reading index advanced 5.0%.

séjour et de salle à manger. Le prix des appareils ménagers avancé de 0.3%, et parmi les autres articles d'ameublement, le prix des revêtements de sol et de la vaisselle étaient plus élevés. L'indice des fournitures de ménage a avancé de 1.2% et presque tous les articles de l'enquête ont enregistré des hausses. Du septembre 1972 à septembre 1973, l'indice de l'habitation avancé de 7.1%.

L'indice du vêtement, qui augmente habituellement en septembre, est passé de 138.4 en août à 139.5 en septembre, ce qui représente une avance de 0.8%. Tous les principaux éléments d'habillement ont enregistré des hausses, mais ceux qui ont le plus contribué à cette avance ont été les vêtements pour hommes pour femmes et les services d'habillement. Les augmentations de 1.3% et 0.6% respectivement dans les indices des vêtements pour hommes et pour femmes sont dues à des hausses de la plupart des articles observés, mais les plus fortes hausses ont été enregistrées dans les vêtements de dessus pour hommes et les vêtements de sport pour hommes et pour femmes. Il y a eu une augmentation moyenne de 1.9% de l'élément des services d'habillement, suite à une hausse des prix dans un grand nombre de centres de blancherie, de nettoyage à sec et de réparations de chaussures. L'indice des vêtements pour enfants a progressé de 0.5%, mais il est resté néanmoins à 2.2% inférieur à son niveau de l'année précédente. Une augmentation des prix du coton et des mélanges de coton a été la principale cause de la hausse de 0.6% de l'indice du tissu la verge entre août et septembre. Les prix des chaussures ont augmenté, en moyenne, de 0.4% suite à une hausse de la plupart des articles observés. Au cours des douze derniers mois, l'indice du vêtement a progressé de 5.4%.

L'indice des transports a augmenté de 0.6%, passant de 138.7 en août à 139.6 en septembre, en raison surtout d'une progression de 1.5% de l'élément utilisation et entretien de l'automobile. Le prix de l'essence a augmenté un peu partout d'une moyenne de 2.7% au cours du mois dernier de 11.4%, depuis le mois dernier. De plus, les frais de réparation des automobiles ont augmenté dans la plupart des centres et le prix de l'huile à moteur et des accumulateurs a augmenté dans beaucoup de villes. D'autre part, les prix des pneus ont généralement diminué. Le prix des voitures neuves a diminué de 0.3%, car l'année automobile 1973 tirait à sa fin. Les transports en commun sont restés inchangés étant donné qu'une hausse négligeable de l'indice des transports urbains a été contrebalancée par une diminution de l'indice des billets de train. Au cours de la période de douze mois se terminant en septembre 1973, l'indice des transports a augmenté de 3.9%.

L'indice des soins personnels et de santé s'est accru de 0.2%, passant de 157.5 en août à 157.8 en septembre, en raison d'une augmentation fractionnaire des niveaux des prix des produits pharmaceutiques et des produits de soins personnels. Au cours des douze derniers mois, l'indice des soins personnels et de santé a augmenté de 5.2%.

L'indice des loisirs, de la formation et de la lecture s'est accru de 0.2%, passant de 146.9 en août à 147.2 en septembre en raison d'une hausse enregistrée dans les éléments de loisirs et de lecture. Dans le domaine des loisirs, une augmentation des prix des réparations des téléviseurs et des tourne-disques l'a emporté sur les réductions des prix des téléviseurs et des appareils stéréo. L'élément de la lecture a augmenté suite à une hausse des prix d'abonnement des journaux à Québec. Au cours des douze derniers mois, l'indice des loisirs, de la formation et de la lecture a augmenté de 5.0%.

The Tobacco and Alcohol index edged up 0.1% to 136.6 in September from 136.5 in August as a result of a small increase in the component for alcoholic beverages. In the latest twelve months, the Tobacco and Alcohol index rose 2.8%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between August and September, the total goods index advanced 0.7% with the main impetus coming from non-durable goods which rose 1.0% mainly in response to higher food, gasoline and fuel oil prices. The index for semi-durable goods rose 0.6% mainly because of higher housing quotations, but the durable goods component remained unchanged. The services index rose 0.5% as increases were registered for, amongst others, shelter, transportation and recreation services. In the twelve months to September 1973, the total goods index advanced 10.7% and that for services 6.8%.

L'indice des tabacs et alcools n'a augmenté que de 0.1%, passant de 136.5 en août à 136.6 en septembre, en raison d'une faible augmentation du prix des boissons alcooliques. Au cours des douze derniers mois, l'indice des tabacs et alcools a augmenté de 2.8%.

Si l'on classe les articles qui composent l'indice des prix à la consommation par biens et services, on obtient une image différente de l'incidence du mouvement des prix à la consommation. Entre août et septembre, l'indice des biens a progressé de 0.7%, par suite principalement de l'augmentation de 1.0% du prix des biens non durables, hausse principalement attribuable à une majoration du prix des aliments, de l'essence et du mazout. L'indice des biens semi-durables a augmenté de 0.6% principalement en raison d'une hausse du prix des vêtements; cependant, l'élément des biens durables est resté inchangé. L'indice des services a augmenté de 0.5% en raison des hausses enregistrées, entre autres, dans les services de logement, de transport et de loisir. Au cours de la période de douze mois se terminant en septembre 1973, l'indice de l'ensemble des biens a augmenté de 10.7% et celui des services, de 6.8%.

<u>Industrial price indexes - Indices des prix dans l'industrie</u>							
Industry selling price index: manufacturing - 1961=100(1) - Indices des prix de vente dans l'indus- trie: industries manufacturières	147.4	147.8	128.5	127.8	- 0.3	+ 0.5	+ 14.7
General wholesale index - (1935-39=100)(2) - L'indice général de gros	400.0	402.7r	313.9	310.8	- 0.7	+ 1.0	+ 27.4
Vegetable products - Substances végétales	410.2	415.3r	251.7	246.8	- 1.2	+ 2.0	+ 63.0
Animal products - Produits animaux	492.3	517.9r	376.4	377.7	- 4.9	- 0.3	+ 30.8
Textile products - Produits textiles	353.1	336.1r	281.5	281.4	+ 5.1	-	+ 25.4
Wood products - Produits du bois	508.3	504.8r	444.4	438.1	+ 0.7	+ 1.4	+ 14.4
Iron products - Produits du fer	360.5	358.3r	323.8	323.2	+ 0.6	+ 0.2	+ 11.3
Non-ferrous metals - Métaux non ferreux	336.8	338.5r	270.5	259.2	- 0.5	+ 4.4	+ 24.5
Non-metallic minerals - Minéraux non métallique	257.9	255.2	234.6	234.6	+ 1.1	-	+ 9.9
Chemical products - Produits chimiques	264.4	265.0r	246.4	245.1	- 0.2	+ 0.5	+ 7.3
<u>Canadian farm products - (1935-39=100)(3) - Produits</u>							
agricoles canadiens	397.7	421.1	306.9r	314.8r	- 5.6	- 2.5	(3)
Eastern - Total - De l'est	430.6	461.9	317.1	329.0	- 6.8	- 3.6	+ 35.8
Western - Total - De l'ouest	364.9	380.4	296.6r	300.6r	- 4.1	- 1.3	(3)
Field - Cultures	267.2	283.9	223.5r	227.9r	- 5.9	- 1.9	(3)
Animal - Animaux	528.1	558.3	390.2	401.6	- 5.4	- 2.8	+ 35.4
<u>Selected price indexes - (2) - Certains indices de prix</u>							
Thirty industrial materials - (1935-39=100) - Trente matériaux industriels	406.2	419.7r	303.2	300.3	- 3.2	+ 1.0	+ 34.0
Residential building construction input - (1971=100) - Matériaux de construction résidentielle	124.7	123.9	112.7	111.5	+ 0.6	+ 1.1	+ 10.6
Non-residential building materials - (1961=100) - Maté- riaux de construction non résidentielle	160.0	158.2	144.1	143.1	+ 1.1	+ 0.7	+ 11.0
<u>Consumer price indexes - Canada (1961=100) - Indices des prix à la consommation</u>							
All-items - Indice d'ensemble	153.9	153.0	141.8	141.3	+ 0.6	+ 0.4	+ 8.5
Food - Aliments	170.2	168.7	146.7	145.7	+ 0.9	+ 0.7	+ 16.0
Housing - Habitation	154.4	153.6	144.1	143.8	+ 0.5	+ 0.2	+ 7.1
Clothing - Habillement	139.5	138.4	132.4	131.3	+ 0.8	+ 0.8	+ 5.4
Transportation - Transports	139.6	138.7	134.4	134.3	+ 0.6	+ 0.1	+ 3.9
Health and personal care - Soins personnels et hygiène Recreation, education and reading - Loisirs, formation et lecture	157.8	157.5	150.0	150.0	+ 0.2	-	+ 5.2
Tobacco and alcohol - Tabacs et alcools	147.2	146.9	140.2	140.5	+ 0.2	- 0.2	+ 5.0
	136.6	136.5	132.9	132.9	+ 0.1	-	+ 2.8
<u>Security price indexes - (1961=100) - Indices des cours des valeurs mobilières</u>							
Investors index - Total - Indices des portefeuillistes ..	189.2	187.2	180.4	182.2	+ 1.1	- 1.0	+ 4.9
Industrials - Total - Industriels	205.9	203.3	187.3	188.8	+ 1.3	- 0.8	+ 9.9
Industrial mines - Mines industrielles	140.2	138.8	129.1	123.9	+ 1.0	+ 4.2	+ 8.6
Foods - Aliments	142.4	149.1	149.1	150.8	- 4.5	- 1.1	- 5.1
Beverages - Boissons	259.6	259.8	247.0	252.5	- 0.1	- 2.2	+ 5.1
Textiles and clothing - Textiles et vêtements	152.6	152.4	177.9	184.5	+ 0.1	- 3.6	- 14.2
Pulp and paper - Pâte et papier	154.2	141.3	103.0	110.3	+ 9.1	- 6.6	+ 49.7
Printing and publishing - Impression et édition	365.6	369.9	341.8	360.5	- 1.2	- 5.2	+ 7.0
Primary metals - Métaux primaires	127.7	126.7	113.6	113.7	+ 0.8	- 0.1	+ 12.4
Metal fabricating - Fabrications des métaux	215.4	215.6	198.0	201.0	- 0.1	- 1.5	+ 8.8
Non-metallic minerals - Minéraux non métalliques	176.1	181.0	177.0	175.7	- 2.7	+ 0.7	- 0.5
Petroleum - Pétrole	345.0	337.3	310.4	311.5	+ 2.3	- 0.4	+ 11.1
Chemicals - Produits chimiques	112.2	110.7	114.6	115.5	+ 1.4	- 0.8	- 2.1
Construction - Construction	153.1	153.5	117.8	112.9	- 0.3	+ 4.3	+ 30.0
Retail trade - Commerce de détail	150.6	154.1	168.2	172.2	- 2.3	- 2.3	- 10.5
Utilities - Total - Services publics	137.4	138.6	154.5	157.1	- 0.9	- 1.7	- 11.1
Pipeline - Pipe-line	137.0	140.7	185.7	188.7	- 2.6	- 1.6	- 26.2
Transportation - Transport	319.9	329.2	311.6	317.1	- 2.8	- 1.7	+ 2.7
Telephone - Téléphone	82.4	83.2	87.7	90.0	- 1.0	- 2.6	- 6.0
Electric power - Énergie électrique	110.8	105.8	123.5	124.1	+ 4.7	- 0.5	- 10.3
Gas distribution - Distribution du gaz	147.1	147.4	187.4	190.5	- 0.2	- 1.6	- 21.5
Finance - Total - Finances	181.3	178.2	185.8	187.8	+ 1.7	- 1.1	- 2.4
Banks - Banques	214.8	210.8	213.0	218.0	+ 1.9	- 2.3	+ 0.8
Investment and loan - Placements et prêts	128.6	127.1	145.5	142.0	+ 1.2	+ 2.5	- 11.6
<u>Mining - Actions minières</u>							
Mining Index - Total - Indices des prix des titres minières	131.4	137.1	115.4	116.3	- 4.2	- 0.8	+ 13.9
Gold - Or	157.7	170.3	121.7	126.0	- 7.4	- 3.4	+ 29.6
Base metals - Métaux communs	118.1	120.1	112.9	112.0	- 1.7	+ 0.8	+ 4.6
<u>Supplementary indexes - Indices supplémentaires</u>							
Uranium - L'uranium	239.4	249.6	183.3	187.2	- 4.1	- 2.1	+ 30.6
Primary oils and gas - Pétrole et gaz primaires	454.4	462.2	540.1	537.9	- 1.7	+ 0.4	- 15.9

(1) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 88.

(2) Indexes for 1973 are subject to revision. - Les indices pour 1973 sont sujets à révision.

(3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1973 are subject to revision. See notes page 89 for details of Western grain prices. - La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1973 sont sujets à révision. Voir les renvois de la page 89 pour les prix détaillés des grains de l'Ouest.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES
TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

		1961 = 100													
Industries and selected commodities(1)		Month — Mois												Annual	
Industrie et certains produits(1)		J	F	M	A	M	J	J	A	S	O	N	D	Annuel	
FOOD AND BEVERAGES INDUSTRIES — INDUSTRIES DES ALIMENTS ET DES BOISSONS		1969	118.0	118.5	118.9	119.9	121.6	123.7	123.5	122.8	122.7	121.9	121.7	122.7	121.3

TABLE 10. Consumer Price Index for Canada - Reclassified by Goods and Services(1)

TABLEAU 10. Indice des prix à la consommation - Reclassé par biens et services(1)

(1961 = 100)

	Sept. 1973 Sept.	Aug. 1973 Août	Sept. 1972 Sept.	Aug. 1972 Août	1972	1971	1970
Goods - Biens	146.3	145.3	132.2	131.9	130.8	125.1	122.9
Durable goods - Biens durables	109.7	109.7	107.8	108.0	107.7	106.4	104.7
Automobiles - Automobiles	105.1	105.4	104.8	104.8	104.3	102.3	98.8
Furniture and floor covering - Meubles et revêtements de sol	133.6	132.7	126.1	125.8	125.8	123.1	122.0
Household appliances and equipment - Appa- reils et accessoires ménagers	107.4	107.1	104.8	105.2	104.8	103.2	102.5
Home entertainment and recreation equipment - Matériel récréatif	96.4	96.7	96.2	97.7	97.3	100.8	102.1
Semi-durable goods - Biens semi-durables	137.6	136.8	131.3	130.5	131.0	127.9	126.3
Clothing, footwear and piece goods(2) - Vêtements, chaussures, et tissus à la verge(2)	136.7	135.7	130.5	129.5	130.3	127.4	125.8
Household furnishings and utensils - Articles d'ameublement et articles ménagers	145.1	145.2	137.1	136.5	135.5	132.0	129.7
Other semi-durable goods(3) - Autres biens semi-durables(3)	139.2	139.9	132.7	132.9	132.7	128.3	126.8
Non-durable goods(4) - Biens non durables(4)	158.8	157.3	138.9	138.6	136.9	129.3	126.8
Non-durables excluding food - Biens non durables sans les aliments	138.9	137.5	130.2	130.0	129.5	125.9	122.1
Alcoholic beverages - Boissons alcooliques	130.0	129.9	127.2	127.2	126.3	122.5	120.9
Tobacco products - Produits du tabac	146.3	146.3	141.3	141.3	140.7	137.7	134.7
Domestic supplies - Fournitures de ménage	128.3	127.7	122.1	120.0	120.9	118.4	118.4
Health and personal care supplies - Pro- duits pour l'hygiène et les soins personnels	116.9	116.5	114.7	114.9	114.0	112.1	111.8
Other non-durables - Autres biens non durables	150.1	147.4	134.3	134.3	133.9	129.3	121.9
Services	170.0	169.2	159.2	159.0	157.9	150.1	143.1
Shelter services - Habitation	171.5	170.8	158.9	158.6	157.9	149.7	141.8
Household utilities - Services publics aux ménages	131.3	131.1	123.6	123.6	122.3	119.6	116.2
Domestic services - Services aux ménages	200.0	200.0	186.2	186.2	183.8	170.8	158.8
Health, personal care, and clothing services - Hygiène, soins personnels et services vestimentaires	176.1	175.0	163.2	162.3	161.9	152.7	148.0
Recreation, education, and communication services - Loisirs, formation et communications	152.0	151.6	146.6	146.4	144.7	137.9	133.5
Transportation services - Transports	182.8	181.8	177.2	176.9	174.8	168.1	160.0

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. (1) Indexes for current year are subject to revision. Les données de l'année courante sont sujettes à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

- (1,2) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
- (2) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractor profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.
- (3) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (4) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (5) Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

(1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.

(4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial de produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", séries de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

The concept of price change measured is net return to

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Phase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from various industries. Indexes for certain categories of metals are not published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western wheat used in the index prior to August 1972, are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Northern at Thunder Bay. From August 1972 forward, prices used are for Nos. 1 and 2 C.W. Red Spring 14% at Thunder Bay. Prices for western oats and barley are also supplied by the Wheat Board. Initial payments are first used in the index calculation and are revised when further payments are announced.

Final payments for the crop year August 1971 - July 1972 were announced on February 13, 1973 for wheat and barley. No final payment was granted for barley.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. À compter du 1er août 1972, les prix utilisés sont ceux du blé rouge de printemps, nos 1 et 2 (14%) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1971 à juillet 1972 ont été annoncés le 13 février 1973, en ce qui concerne le blé et l'avoine. Il n'y a pas eu de dernier paiement pour l'orge.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

30

$$\sqrt[30]{\frac{P^1}{tN} \times \frac{P^2}{tN} \times \frac{P^3}{tN} \times \dots \times \frac{P^{30}}{tN}}$$

30

$$\sqrt[30]{\frac{P^1}{t \ 35-39} \times \frac{P^2}{t \ 35-39} \times \frac{P^3}{t \ 35-39} \times \dots \times \frac{P^{30}}{t \ 35-39}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de définir exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar, parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a une tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

30

$$\sqrt[30]{\frac{P^1}{tN} \times \frac{P^2}{tN} \times \frac{P^3}{tN} \times \dots \times \frac{P^{30}}{tN}}$$

30

$$\sqrt[30]{\frac{P^1}{t \ 35-39} \times \frac{P^2}{t \ 35-39} \times \frac{P^3}{t \ 35-39} \times \dots \times \frac{P^{30}}{t \ 35-39}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

RETAIL PRICE INDEXES

The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there is a continually measurable market price over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise

INDICES DES PRIX DE DÉTAIL

L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépenses des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments

Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 no. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that they do not in any way indicate whether price levels are higher or lower in one city than in another. Rather, they measure, within each city, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services

l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent,

that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is \$90.91 ($(100.0/110.0) \times \100), which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse du prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 centes ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (Tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait compte les changements de prix à la consommation peut être calculée en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des salaires moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 au montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91 ($(100.0/110.0) \times \100), que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B revised figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 10% rise in money wages $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is 102.98 $((146.23/142.0) \times 100)$. (The wage and the price index both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollars (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wages and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollars (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, wage data adjusted by the consumer price index (which is a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce wages to a constant dollar basis by using an index which is based on consumption patterns.

It should also be kept in mind that measures of changes in real earnings calculated from averages of gross wages may differ from changes in the purchasing power of

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est 102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du

"take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971

revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes qui comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherches. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons de prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour des mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969 et avril 1972 de *Prix et indices des prix* (no 62-002 catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains à prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées

data, the updating of these measurements of inter-city price differentials was accomplished by application of relative movement of prices, at the item level in each city, the intervening periods as derived from the relevant city mer price indexes. These price relationships at the item were aggregated on the basis of the Canada urban mer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns among cities, the magnitude of these differences in the covered is not such as to affect most of the spatial trisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-retail price differentials, aggregative indexes beyond budget groupings are not shown.

The weighting factors used to combine items to group component levels in Table 14 are based on 1957 expenditure and therefore will not be identical to the 1967 weights, used in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales tax and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of 1961 = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the basis of any of the individual cities included.

Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. The data have been modified to reflect 1961 prices and weights. Farm Input Price Indexes are calculated quarterly for the Western and all Canada on a 1961 = 100 time

Farm Input Price Indexes replace one of the two component indexes of the previously published series, the Index Numbers of Commodities and Services Used by Families, 1935-39 = 100. The latter index was composed of a Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replace the Composite Index Exclusive of Living Component from the latter.

directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the *Globe and Mail* and the *Montreal Gazette*. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of price in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new subgroups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

Le bulletin hors série *Farm Input Price Indexes, 1961=100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (no 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961=100* (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour. On a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent la mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placier hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture à la Bourse du jeudi indiqués dans le *Globe and Mail* et dans le *Montreal Gazette*. Pour les actions privilégiées, les prix sont des moyennes pondérées mensuelles. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâte et papier, huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des lignes a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe des banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient auparavant limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent d'être basés sur les actions en circulation.

For the list of stocks currently included in the Inves-
s index and Preferred Index, see *Prices and Price Indexes*
February 1973.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials
and wage rates for residential and non-residential building
construction are being published here for the convenience of
users (Table 20). A more complete description of the charac-
teristics of the indexes appeared in the May 1970 issue of
Prices and Price Indexes, and this explanation is available on
request from the Prices Division, as is historical monthly data
for the series.

Because the indexes measure the impact of price
change on the materials and labour inputs to construction,
and not the effects of changes in profit margins or productiv-
ity, there is thought to be an upward bias in these indexes as
indicators of price change for the output of building construc-
tion, or buildings in place. Users are therefore warned to
exercise caution in making use of the series, for this purpose.
A comparison of these series with the implicit price defla-
tors (1) providing an estimate of price change for the output
of the industry, derived from the measurement of gross fixed
capital formation in constant dollars, will provide some
insight into the effects on the price movement of adjusting the
fixed-weighted input indexes for changes in productivity and
profit margins.

During the period from 1926-1966 a special sample
respondents supplied materials prices for the index. As of
1966 this sample has been replaced with prices from the ISPI
index (2). The latter are published monthly in Table 2 of this
publication.

The Construction wage rate series is based on wage
rate material supplied by the Labour Standards Branch,
Dept. of Labour, and relates to minimum wages paid on
government contracts for construction in a variety of trades
and cities.

Users are reminded that the indexes were arithmeti-
cally rebased to the year 1961 = 100 and therefore combining
components with the weights as shown will not provide
a composite index provided. Users able to provide their
own weights for the components can recombine the compo-
nents to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12
major construction trades in each of 14 cities in Canada.
Weighted average city indexes are prepared as well as a 14
city composite. Indexes are released quarterly in summary
form in Tables 21 and 22 of *Prices and Price Indexes*
(62-002). This index is found in Table 20 of *Prices and Price*
Indexes (62-002). Full trade detail, by city, is published

La liste des titres repris actuellement dans les indices des
valeurs de placements et dans les indices des valeurs privilégiées
se trouve dans *Prix et indices des prix* de février 1973.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de
matériaux et de salaires dans la construction résidentielle et non
résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs
(Tableau 20). On trouvera une description plus détaillée des
caractéristiques des indices dans *Prices—and—Price—Indexes* de
mai 1970. On peut s'en procurer un exemplaire ainsi que les
données mensuelles chronologiques sur cette série en s'adressant
à la Division des prix.

Comme les indices mesurent l'influence des variations de
prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment
plutôt que les répercussions des variations de marges bénéficiaires
ou de productivité, on les croit surestimés en tant qu'indicateurs
des variations de prix de la construction, ou des bâtiments
construits. Les utilisateurs devront donc faire preuve de discerne-
ment quand ils se serviront des séries à cette fin. Si l'on compare
ces séries avec les facteurs de dégonflement (1) des prix implicites
(qui donnent une estimation de la variation du prix pour la
production de l'industrie), obtenus en mesurant la formation brute
de capital fixe en dollars constants, on aura un aperçu des effets de
l'ajustement sur l'évolution des prix des indices à pondération fixe
des entrées pour tenir compte des variations de productivité et de
marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial
d'enquêtes a donné les prix pour l'indice. En 1961, on a remplacé
cet échantillon par les prix tirés du système I.P.V.I. (2). Ces prix
sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'indus-
trie du bâtiment est basée sur les chiffres fournis par la Direction
des normes du travail du ministère du Travail; elle a trait au
salaire minimum versé aux termes de marchés signés avec le
gouvernement pour des travaux de construction dans divers corps
de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été
recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas
l'indice synthétique fourni en combinant les éléments et les
pondérations donnés. Les utilisateurs qui sont à même de fournir
leur propre pondération pour les éléments peuvent procéder à leur
propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12
principaux métiers de la construction dans 14 grandes villes
canadiennes. On calcule les indices pondérés moyens pour chaque
ville de même que l'indice synthétique des 14 villes. Les indices
sont publiés chaque trimestre dans les Tableaux 21 et 22 de la
publication *Prix et indices des prix* (numéro de catalogue 62-002).
On peut trouver cet indice dans le Tableau 20 de la publication

Gross National Product Division, Statistics Canada.
Industry Selling Price Indexes 1956-1968 Cat.
62-528.

(2) *Indices des prix de vente dans l'industrie, 1956-1968*,
no 62-528 au catalogue.

quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction* in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously

Prix et indices des prix (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyen des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Etant donné que les travailleurs syndiqués dans les villes s'occupent surtout de construction non résidentielle, ou commerciale, et que les taux de métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, et à indexer et à mettre à jour les prix de travaux de routes effectués précédemment.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

Completed roadwork, and as historical measurements of price levels in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as water pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by the determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are those paid by government departments to suppliers.

Electric Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and operating electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structures would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. Such uses the indexes introduced in this publication have no such short-comings. Nonetheless, they may be helpful for the purposes provided the users understand the deficiencies. The reader is asked to make particular note of Section III of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are included, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component indexes and their weights included in the aggregate index presented herein are inappropriate for a particular use the user should consider selecting appropriate com-

ponents, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par le ministère aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62 = 526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent

ponent indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans certains cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, lignes de transport d'énergie, de postes de transformation ou postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, compteurs, les transformateurs de distribution et les dépenses de main-d'œuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage sont exclus.

Par définition, l'expression "service d'électricité au public" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées de déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de l'enquête.

Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which is described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.

Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.

Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.

Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Indexes of Machinery and Equipment

In response to the need of users wishing either to have expenditure data of machinery and equipment for change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment and cases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100. Most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were supplied by major purchasers.

Conceptually purchasers' prices should be utilized in the indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices have been corrected as relevant for duty, exchange and sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices and Cost Index collections from manufacturers most of whom reside in the United States.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

(a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.

(b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.

(c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.

(d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

NOTES ON PRICES AND PRICE INDEX NUMBERS

NOTES SUR LES PRIX ET INDICES DE PRIX

Industry Selling Price Index: Manufacturing (1961 = 100)

The industry selling price index for total manufacturing (1961 = 100) increased by 0.6% in October to 148.6 from September high of 147.7. It was 15.2% higher than the October 1972 index of 129.0. Of the 103 industry indexes included in the total, 70 were higher, 11 declined, and 22 were unchanged.

The more notable increases were 6.9% in the textile group (particularly cotton yarn and cloth mills, 14.4%), 2.0% in paper and allied products, and 1.7% in primary metal industries, (particularly smelting and refining, 2.4%, and copper and alloy rolling, casting, and extruding, 5.0%). These increases were partially offset by declines in the food and beverages group (down 0.7%), (particularly feed mills, 9.0%), slaughtering and meat packing 1.4%, the feed related vegetable oil mills industry 8.8%), and the wood products group mainly sawmills and planing mills, 2.6% and shingle mills, 1%).

Indice des prix de vente dans l'industrie: Industries manufacturières (1961 = 100)

L'indice des prix de vente dans l'industrie pour l'ensemble des industries manufacturières (1961 = 100) a augmenté de 0.6% en octobre, passant de son sommet de 147.7 en septembre à 148.6. Il s'est accru de 15.2% par rapport à son niveau d'octobre 1972, soit 129.0. Sur les 103 industries représentées, les indices de 70 d'entre elles ont augmenté, ceux de 11 autres ont baissé, et ils sont restés inchangés dans le cas des 22 autres.

Les progressions les plus notables ont atteint 6.9% dans le groupe des textiles, en particulier pour les filés et les tissages de coton, (14.4%), les papiers et produits connexes (2.0%), et la première transformation des métaux (1.7%); plus particulièrement la fonte et l'affinage: 2.4%, et le laminage, le moulage et l'extrusion des métaux: 5.0%. Ces augmentations ont été en partie compensées par une baisse de 0.7% des prix dans le groupe des aliments et boissons (en particulier dans le cas des fabricants d'aliments pour animaux (-9.0%), de l'abattage et du conditionnement de la viande (-1.4%), l'industrie de l'huile végétale reliée à celle de la fabrication d'aliments pour animaux (-8.8%)), et dans le groupe des produits du bois (principalement les scieries et les ateliers de rabotage, avec -2.6%, et des usines de bardeaux, avec -5.1%). Pour plus de renseignements, commandez le numéro d'octobre de la publication Prix et indices de prix (62-002, 40c./\$4).

Indexes not available at this level of aggregation. - Indices non disponibles à ce niveau d'agrégation.

General Wholesale Index (1953-39=100)

The general wholesale price index rose 0.9% in October to 404.1 from the revised September index of 400.7. It was 26.8% higher than the October 72 index of 318.8. Five of the eight major group indexes were higher, while three declined.

Although there were significant declines during the month from September to October in certain important primary products, these declines were more than offset by increases in such products as textiles and metals.

Grains declined fractionally from their second high levels in September. For the second month livestock and fresh meats continued to decline. Declines were also evident in certain lumber prices, notably those destined for use in construction. Certain hardwoods, used mainly in the production of furniture, continued to increase.

The textile products group index moved up 8.9% in October to 384.5 from the September Index of 353.1 on higher prices for miscellaneous cotton products, cotton fabrics and raw cotton. An advance of 4.8% to 354.5 from 338.2 in Non-Ferrous metals group index reflected price increases for silver, zinc and copper and its products. The Iron products group index moved up 1.2% to 365.1 from the revised index of 360.7 on price increases for hardware and wire. The chemical products group index increased to 267.8 from the revised index of 265.2. Non-metallic minerals rose to 265.1 from the revised index of 261.8.

The animal products group index moved 1.5% lower to 483.8 from the revised September index of 491.2, reflecting declines in furs and livestock. Minor declines were recorded in the other two major group indexes: Wood products to 506.7 from the revised index of 509.6 and Vegetable products to 408.6 from the revised index of 410.7.

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a progressé de 0.9% en octobre, passant de 400.7 (indice révisé) en septembre à 404.1. Il a augmenté de 26.8% par rapport à son niveau de 318.8 en octobre 1972. Des huit groupes principaux, les indices de cinq groupes ont augmenté, et les trois autres ont baissé.

Bien que l'on ait observé des diminutions appréciables de septembre à octobre dans le prix d'un certain nombre de produits primaires importants, ces diminutions ont été plus que compensées par des augmentations de prix de produits tels que les textiles et les métaux.

Le prix des céréales a baissé légèrement par rapport à son second sommet de septembre. Le prix de bétail et des viandes fraîches a continué à baisser pour le deuxième mois consécutif. On a aussi relevé des baisses de prix de certains bois de sciages, notamment dans ceux destinés à la construction. Le prix de certains bois durs, utilisés principalement en ameublement, a continué à monter.

L'indice du groupe des produits textiles a progressé de 8.9% en octobre, passant de 353.1 en septembre à 384.5, en raison d'une hausse des produits divers en coton, des tissus en coton et du coton brut. L'indice du groupe des métaux non ferreux s'est accru de 4.8%, passant de 338.2 à 354.4, en raison de la hausse du prix de l'argent, du zinc, du cuivre et de ses produits. L'indice du groupe des produits du fer a augmenté de 1.2%, passant de 360.7 (indice révisé) à 365.1, par suite d'une augmentation du prix de articles de quincaillerie et du fil de fer. L'indice du groupe des produits chimiques s'est accru, passant de 265.2 (indice révisé) à 267.8; celui des minéraux non métalliques est passé de 261.8 (indice révisé) à 265.1.

L'indice du groupe des produits d'origine animale a baissé de 1.5%, passant de 491.2 (indice révisé) en septembre, à 483.8, devant la baisse du prix des fourrures et du bétail. On a noté de diminutions peu importantes dans les autres deux groupes principaux, celui des produits du bois, qui est passé de 509.6 (indice révisé) à 506.7, et celui des produits d'origine végétale, qui est passé de 410.7 (indice révisé) à 408.6.

*These indexes are preliminary.

Security Price Indexes (1961=100)

The investors' index of common stocks increased 4.3% in October to 197.4. Among the three major groups, industrials went up 4.3% to 214.8, utilities increased 3.3% to 141.9, and finance gained 5.4% to 191.1. Among the various industrial sub-groups, oils eased 3.8% to 333.9, while other sub-groups moved up. As for utilities, all sub-groups registered gains. The finance index moved up because of higher indexes for the two sub-groups.

In the same time, the index of mining stock prices also increased by 5.8% to 139.0; golds gained 2.9% to 162.3, while base metals moved 8.0% to 127.5.

Of the two supplementary indexes, uraniums gained 13.2% to 270.9, while primary oils and gas advanced 1.3% to 460.4.

The preferred stock index registered a 3.5% increase to 73.1 in October from 70.6 in September.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets declined 2.1% to 389.5 in October from the revised September index of 397.9. A decrease of 4.2% to 394 from 528.5 in the animal products index reflected lower prices for steers, raw wool, calves and hogs on both Eastern and Western markets, and for lambs and eggs in the East. Higher prices were shown for fluid milk on both markets, and for hams and eggs in the West.

The field products index moved 2.0% higher to 272.5 from 267.2 on price increases for potatoes and hay on both markets. Lower prices were shown for rye on both Eastern and Western markets, for corn and oats in the East, and for wheat in the West.

Thirty Industrial Materials Price Index (1953-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, rose 2.8% to 418.3 in October from the revised September index of 406.8. Prices were higher for twelve commodities, lower for eight and unchanged for ten. Principal changes included increases for cotton, bleached sulphite pulp, zinc, copper, lead, rosin, sugar, raw rubber, oats, tin, beef hides and steel sheets. Decreases were recorded for steers, cottonseed oil, soft lumber, raw wool and hogs.

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours de placement des actions ordinaires a augmenté de 4.3% en octobre, pour s'établir à 197.4. Parmi les trois grands groupes, les valeurs industrielles ont progressé de 4.3% pour se fixer à 214.8, les services publics ont augmenté de 3.3% pour s'établir à 141.9, et les finances ont gagné 5.4% pour s'inscrire à 191.1. Parmi les sous-groupes industriels, les valeurs du pétrole ont diminué de 3.8% (331.9) alors que les autres sous-groupes étaient à la hausse. Dans le cas des services d'utilité publique tous les sous-groupes ont enregistré un gain. L'augmentation de l'indice des finances est attribuable à une hausse des deux sous-groupes.

Au cours de la même période, l'indice du cours des titres miniers a, lui aussi, progressé de 5.8% pour s'établir à 139.0; les aurifères ont augmenté de 2.9% (162.3) tandis que les métaux communs s'inscrivaient à 127.5, suite à un gain de 8.0%.

Pour ce qui est des deux indices supplémentaires, l'uranium a augmenté de 13.2% pour se fixer à 270.9 alors que le pétrole et le gaz primaires avançaient de 1.3% (460.4).

L'indice des actions privilégiées a gagné 3.5%, passant de 70.6 en septembre à 73.1 en octobre.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a baissé de 2.1% en octobre, passant de 397.9 (indice révisé) en septembre à 389.5. Une baisse de 4.2% de l'indice des produits d'origine animale, qui passe de 528.5 à 596.4, est imputable à la diminution du prix des bouvillons, de la laine brute, des veaux et des cochons dans l'Est et dans l'Ouest, et à la baisse du prix des agneaux et des oeufs dans l'Est. On a noté une hausse du prix du lait de consommation sur les deux marchés, et une augmentation du prix des agneaux et des oeufs dans l'Ouest.

L'indice des produits de grande culture a augmenté de 2.0%, passant de 267.2 à 272.5, en raison d'une hausse de prix des pommes de terre et du foin sur les deux marchés. On a noté une baisse du prix du seigle sur les deux marchés, et du prix du maïs et de l'avoine dans l'Est, et du lin dans l'Ouest.

Indice de prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, a progressé de 2.8% en octobre, passant de 406.8 (indice révisé) en septembre à 418.3. Les prix de douze marchandises ont augmenté; ils ont baissé dans le cas de huit autres et ils sont restés inchangés pour les dix autres. Les principales variations comprennent une hausse du prix du coton brut, de la pâte de bois blanchie au sulphite, du zinc, du cuivre, du plomb, de la résine, du sucre brut, du caoutchouc brut, de l'avoine, de l'étain, des peaux de boeuf et des tôles d'acier, tandis que l'on a constaté une baisse du prix des bouvillons, de l'huile de coton, du bois d'épinette, de la laine brute et des porcs.

Consumer Price Movements

The Consumer Price Index for Canada (1961 = 100) rose 0.3% to 154.3 in October from 153.9 in September. Food prices fell 0.3% but the level of prices for All-Items other than Food advanced 0.6% with the main contributors being increases of 2.0% and 0.3% in the Clothing and Housing components, respectively. The Health and Personal Care index rose 1.0% while that for Recreation, Education and Reading increased 0.4%. Transportation prices edged up, on average, 0.1% and no change was recorded in the index for Tobacco and Alcohol. Between October 1972 and October 1973, the All-Items Index advanced 8.7%.

The Food index declined 0.3% to 169.7 in October from 170.2 in September as the price level of food for home consumption fell 0.7%, outweighing an advance of 2.1% for food consumed away from home. The decline in the food at home component was mainly attributable to lower prices for beef, pork, fresh fruit, beverages and some dairy products. The index for meat, poultry and fish fell 2.8%, thus registering its first downward movement since last May. Retail price levels for beef and pork in early October averaged more than 5% below those of a month earlier, contrasting with a 2.4% rise in poultry prices. In the latest twelve months, the index for meat poultry and fish climbed over 28%, with poultry advancing about 48%, pork over 28% and beef almost 24%. Between September and October, egg prices recorded their first decline since last March, falling 2.3%, but were nevertheless retailing almost 50% above their October 1972 level. Fresh fruit prices, which normally decline at this time of year, dropped 5.8% in the latest month; fresh vegetable quotations, in contrast, rose 8.7%. The index for dairy products fell 0.6% mainly because of reductions in fresh milk and powdered skim milk to which government subsidies are applicable. The level of prices for cereal and bakery products rose 3.1%, continuing their advance of recent months. Amongst fats and oils, margarine prices rose over 8% while increases were also recorded for shortening and for salad oils and dressing. Beverage prices declined, however, with tea and soft drinks retailing at levels slightly below a year earlier. Between October 1972 and October 1973, the Food index moved up 16.8%, with the price of food consumed at home rising 16.7% and that for food away from home by 17.0%.

The Housing index rose 0.3% to 154.9 in October from 154.4 in September as a result of increases of 0.4% and 0.2% in the shelter and the household operation components, respectively. Within shelter, the home-ownership element advanced 0.5% and rents rose 0.2%. Among household operation items, fuel oil prices moved up, on average, 0.6% as increases were registered in a number of Quebec, Ontario and British Columbia cities. Furniture quotations averaged 0.4% higher and the level of prices for floor coverings, linen and tableware also rose. The household supplies index advanced 0.7% as most items surveyed registered increases.

Mouvement des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961 = 100) a progressé de 0.3% en octobre, passant de 153.9 en septembre à 154.3. Les prix des aliments ont baissé de 0.3%, mais le niveau des prix de tous les éléments autres que les aliments a augmenté de 0.6%, en raison principalement d'une hausse de 2.0% de l'indice de l'habillement et de 0.3% de l'indice de l'habitation. L'indice des soins personnels et de l'hygiène a progressé de 1.0% tandis que celui des loisirs, de la formation et de la lecture augmentait de 0.4%. L'indice des transports n'a marqué qu'une légère avance de 0.1%, tandis que l'on n'a observé aucun changement pour les tabacs et alcools. Entre octobre 1972 et octobre 1973, l'indice d'ensemble a avancé de 8.7%.

L'indice des aliments a reculé de 0.3%, passant de 170.2 en septembre à 169.7 en octobre en raison d'une baisse de 0.7% des prix des aliments consommés à la maison qui a eu plus de poids qu'une augmentation de 2.1% du prix des aliments consommés à l'extérieur de la maison. Le recul de l'indice des aliments consommés à la maison s'explique principalement par une baisse des prix du boeuf, du porc, des fruits frais, des boissons et de certains produits laitiers. L'indice de la viande, de la volaille et du poisson a régressé de 2.8%, le premier recul depuis mai dernier. Les prix de détail du boeuf et du porc au début d'octobre étaient en moyenne inférieurs de plus de 5% à ceux d'un mois plus tôt. Contrairement aux prix de la volaille qui ont augmenté de 2.4%. Au cours des douze derniers mois, l'indice de la viande, de la volaille et du poisson a progressé de plus de 28%, la volaille augmentant de 48% environ, le porc de plus de 28%, et le boeuf de près de 24%. De septembre à octobre, le prix des oeufs a baissé pour la première fois depuis mars dernier, soit de 2.3%, mais le prix de détail était néanmoins supérieur de près de 50% à celui observé en octobre 1972. Le prix des fruits frais, qui diminuent normalement à cette époque de l'année, a baissé de 5.8% au cours du mois visé, mais celui des légumes frais a par contre augmenté de 8.7%. L'indice des produits laitiers a baissé de 0.6% en grande partie en raison de la baisse du prix du lait frais et du lait écrémé en poudre, qui font l'objet de subventions de l'Etat. L'indice des céréales et des produits de boulangerie a progressé de 3.1%, poursuivant ainsi le mouvement de hausse des derniers mois. Pour ce qui est des huiles et corps gras, le prix de la margarine a augmenté de plus de 8% et l'on a aussi observé des augmentations dans le cas des graisses végétales et de l'huile de table et de la vinaigrette. Le prix des boissons a cependant baissé, le thé et les boissons gazeuses vendant au détail à des prix légèrement inférieurs à ceux enregistrés un an plus tôt. Entre octobre 1972 et octobre 1973, l'indice des aliments a progressé de 16.8%; le prix des aliments consommés à la maison a augmenté de 16.7% et celui des aliments consommés à l'extérieur de la maison, de 17.0%.

L'indice de l'habitation a avancé de 0.3%, passant de 154.4 en septembre à 154.9 en octobre en raison d'une augmentation de 0.4% de l'élément du logement, et d'une hausse de 0.2% de l'élément des dépenses de ménage. Dans le premier cas, l'élément de la propriété a augmenté de 0.5%, et les loyers, de 0.2%. Dans le second cas, le prix du mazout a augmenté en moyenne de 0.6%, des hausses ayant été observées dans un certain nombre de villes du Québec, de l'Ontario et de la Colombie Britannique. Le prix des meubles a progressé en moyenne de 0.4% et celui du revêtement de sol, du linge de maison et des articles de table a augmenté également. L'indice des fournitures de ménage

the twelve-month period ending October 1973, the Housing index advanced 6.7%.

The Clothing index advanced 2.0% to 142.3 in October from 139.5 in September, reflecting an upward movement in prices that usually occurs between these two months. Women's and men's wear prices rose 3.6% and 2.0%, respectively, partly because of higher quotations for some items of outer wear and partly because of the discontinuance of sales which had been in effect in September on a range of in-seasonal apparel. The children's wear index advanced 1.0% but nevertheless stood 3.3% below its level of a year earlier. A 0.5% rise in the footwear index was mainly attributable to higher quotations for men's shoes, though increased prices were also recorded for women's and children's shoes. The piece goods index rose 0.3%. In the twelve-month period ending October 1973, the Clothing index advanced 5.9%.

The Transportation index edged up 0.1% to 139.7 in October from 139.6 in September as an advance in the component for private transportation outweighed a decline in the public transportation element. The main impetus behind the 0.2% increase in private transportation was a rise in gasoline prices, amounting on average to 0.7%, which largely occurred in cities in the eastern half of the country. Motor oil prices also moved up in some locations. The public transportation component declined 0.5% as a downward movement in train fares index outweighed some higher intercity bus fares. In the twelve months to October 1973, the Transportation index rose 4.2%.

The Health and Personal Care index advanced 1.0% in October from 157.8 in September mainly because of higher prices for dental care in most cities surveyed. Pharmaceutical prices rose 0.3% as increases were recorded for prescribed and non-prescribed medicines. In the personal care category, prices of toiletry items moved up, on average, 0.2%. In the latest twelve months, the Health and Personal Care index advanced 5.4%.

The Recreation, Education and Reading index rose to 147.8 in October from 147.2 in September as increases were recorded in all major components. The index for education rose 1.5% mainly in response to higher driving fees in a number of cities; for reading an advance of 0.5% resulted from increased newspaper subscription rates in Winnipeg, while the recreation component edged up 0.1%. In the twelve months ending October 1973, the Recreation, Education and Reading index rose 5.3%.

In October 1973, the Tobacco and Alcohol index was edged from its September level of 136.6 and stood 2.8% above its level of October 1972.

a avancé de 0.7%; on a en effet noté une augmentation du prix de la plupart des articles observés. Pendant la période de douze mois se terminant en octobre 1973, l'indice de l'habitation a progressé de 6.7%.

L'indice de l'habillement a progressé de 2.0%, passant de 139.5 en septembre à 142.3 en octobre. Cette progression est la conséquence d'une hausse des prix qui se produit habituellement de septembre à octobre. Le prix des vêtements pour femmes et celui des vêtements pour hommes ont augmenté respectivement de 3.6% et de 2.0%, en partie à cause d'une hausse du prix de certains vêtements de dessus, et en partie en raison de la fin des soldes de septembre qui portaient sur un certain nombre d'articles d'habillement hors saison. L'indice des vêtements pour enfants a progressé de 1.4%; il était néanmoins inférieur de 3.3% à celui d'un an plus tôt. L'avance de 0.5% de l'indice des chaussures est principalement attribuable à une hausse du prix des chaussures pour hommes; on a toutefois également observé une hausse du prix des chaussures pour femmes et pour enfants. L'indice du tissu à la verge a progressé de 0.3%. Pendant la période de douze mois se terminant en octobre 1973, l'indice de l'habillement a avancé de 5.9%.

L'indice des transports a marqué une légère avance de 0.1% pour atteindre 139.7 en octobre contre 139.6 en septembre, en raison de la progression de l'élément des transports privés qui a eu plus de poids que la régression de l'élément des transports publics. L'augmentation de 0.2% de l'élément des transports privés est en grande partie attribuable à la hausse du prix de l'essence, qui s'est chiffrée en moyenne à 0.7% et que l'on a pu surtout observer dans les villes situées dans la partie est du Canada. Le prix de l'huile à moteur a également monté à quelques endroits. L'élément des transports publics a baissé de 0.5%, la baisse des tarifs de transport par train ayant eu plus de poids que la hausse de certains tarifs de transport interurbain par autobus. Pendant les douze mois se terminant en octobre 1973, l'indice des transports a progressé de 4.2%.

L'indice de l'hygiène et des soins personnels a progressé de 1.0% pour atteindre 159.3 en octobre contre 157.8 en septembre, en grande partie en raison surtout de la hausse du prix des soins dentaires dans la plupart des villes enquêtées. Le prix des produits pharmaceutiques a monté de 0.3%; on a observé une hausse du prix des médicaments tant prescrits que non prescrits. Pour ce qui est des soins personnels, le prix des articles de toilette a monté en moyenne de 0.2%. Pendant la période de douze mois se terminant en octobre 1973, l'indice de l'hygiène et des soins personnels a avancé de 5.4%.

L'indice des loisirs, de la formation et de la lecture a progressé de 0.4%, passant de 147.2 en septembre à 147.8 en octobre; des hausses ont été enregistrées pour tous les principaux éléments. L'indice de la formation a avancé de 1.5% principalement en raison de la hausse du prix des leçons de conduite dans un certain nombre de villes; pour ce qui est de l'indice de la lecture, l'augmentation de 0.9% observée est attribuable à la hausse des tarifs d'abonnement aux journaux à Winnipeg; par ailleurs, l'indice des loisirs a marqué une progression légère de 0.1%. Pendant la période de douze mois se terminant en octobre 1973, l'indice des loisirs, de la formation et de la lecture a avancé de 5.3%.

En octobre 1973, l'indice des tabacs et des alcools est demeuré stationnaire par rapport à septembre, s'établissant à 136.6, et a augmenté de 2.8% par rapport au niveau d'octobre 1972.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between September and October, the total goods index advanced 0.3%, with the main impetus coming from semi-durable goods which rose 1.8% mainly in response to higher clothing prices. The index for durable goods edged up 0.1% mainly because of higher furniture quotations. On the other hand, the component for non-durable goods fell 0.1% as lower food at home prices offset increases for most other non-durable items. The services index rose 0.4% as increases in the shelter, health and recreation elements outweighed a decrease in transportation services. In the twelve months to October 1973, the total goods index advanced 10.7% and that for services 6.4%.

Les mouvements des prix à la consommation, quand sont reclassés par biens et services, nous donnent un autre aperçu de l'incidence des variations des prix. De septembre à octobre, l'indice d'ensemble des biens a progressé de 0.3%, en grande partie en raison de l'avance de 1.8% observée pour les biens semi-durables principalement par suite de la hausse des prix des vêtements. L'indice des biens durables a accusé une progression légère de 0.1% principalement en raison de la hausse des prix des meubles. Par contre, l'indice des biens non durables a reculé de 0.1%, la baisse du prix des aliments consommés à la maison compensant l'augmentation du prix de la plupart des autres biens non durables. L'indice des services a avancé de 0.4% alors que la hausse des indices du logement, de l'hygiène et des loisirs a eu plus de poids que la baisse de l'indice des services de transport. Pendant la période de douze mois se terminant en octobre 1973, l'indice d'ensemble des biens a progressé de 10.7% et celui des services, de 6.4%.

Construction - Construction	160.7	153.1	120.6	117.8	+ 5.0	+ 2.4	+ 33.3
Retail trade - Commerce de détail	157.8	150.6	161.8	168.2	+ 4.8	- 3.8	- 2.5
Utilities - Total - Services publics	141.9	137.4	149.7	154.5	+ 3.3	- 3.1	- 5.2
Pipeline - Pipe-line	142.1	137.0	182.6	185.7	+ 3.7	- 1.7	- 22.2
Transportation - Transport	328.5	319.9	298.1	311.6	+ 2.7	- 4.3	+ 10.2
Telephone - Téléphone	84.6	82.4	86.3	87.7	+ 2.7	- 1.6	- 2.0
Electric power - Énergie électrique	114.7	110.8	117.0	123.5	+ 3.5	- 5.3	- 2.0
Gas distribution - Distribution du gaz	154.7	147.1	183.0	187.4	+ 5.2	- 2.5	- 15.5
Finance - Total - Finances	191.1	181.3	183.0	185.8	+ 5.4	- 1.5	+ 4.4
Banks - Banques	224.0	214.8	209.0	213.0	+ 4.3	- 1.9	+ 7.2
Investment and loan - Placements et prêts	140.4	128.6	145.0	145.5	+ 9.2	- 0.3	- 3.2
Mining - Actions minières							
Mining Index - Total - Indices des prix des titres miniers	139.0	131.4	109.0	115.4	+ 5.8	- 5.5	+ 27.5
Gold - Or	162.3	157.7	114.6	121.7	+ 2.9	- 5.8	+ 41.6
Base metals - Métaux communs	127.5	118.1	106.9	112.9	+ 8.0	- 5.3	+ 19.3
Supplementary indexes - Indices supplémentaires							
Uranium - L'uranium	270.9	239.4	175.6	183.3	+ 13.2	- 4.2	+ 54.3
Primary oils and gas - Pétrole et gaz primaires	460.4	454.4	543.0	540.1	+ 1.3	+ 0.5	- 15.2

- (1) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 88.
- (2) Indexes for 1973 are subject to revision. - Les indices pour 1973 sont sujets à révision.
- (3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1973 are subject to revision. See notes page 89 for details of Western grain prices. - La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1973 sont sujets à révision. Voir les renvois de la page 89 pour les prix détaillés des grains de l'ouest.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES

TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

1961 = 100

Industries and selected commodities(1) Industrie et certains produits(1)		Month - Mois												Annual
		J	F	M	A	M	J	J	A	S	O	N	D	Annuel
(5) Industry selling price index, manufacturing - Indice des prix de vente dans l'industrie industries manufactu- res	1969	114.5	115.0	115.6	115.9	116.3	116.7	116.4	116.6	116.8	117.2	117.2	118.1	116.3
	1970	119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.9	118.8	119.1
	1971	119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6
	1972	124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4
	1973	133.0	134.5	136.5	138.0	139.4	141.0	142.8	147.8	147.7	148.6			

- (1) Indexes for 1972 and 1973 are subject to revision. - Les indices pour 1972 et 1973 sont sujets à révision
- (2) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - À compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88
- (3) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels:

	Old Series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

- (4) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augment des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
- (5) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88

ALL-ITEMS Consumer Price Index Converted to 1949=100 - October 1973 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Octobre 1973 199.4

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

TABLE 9. Consumer Price Indexes for Canada - Main Groups and Selected Components and Items(1)
TABLEAU 9. Indices des prix à la consommation, Canada - Groupes principaux, éléments et articles choisis(1)
(1961=100)

	Oct. 1973	Sept. 1973	Oct. 1972	Sept. 1972	1972	1971	1970
	Oct.	Sept.	Oct.	Sept.			
All-items - Indice d'ensemble	154.3	153.9	142.0	141.8	139.8	133.4	129.7
Food - Aliments	169.7	170.2	145.3	146.7	141.4	131.4	130.0
Food for home consumption - Aliments consommés à la maison	164.9	166.1	141.3	143.1	137.5	127.4	126.8

Shortening - Graisse végétale	136.6	133.3	122.8	122.8	121.8	118.7	114.1
Salad/cooking oil(2) - Huile à frire ou de table(2)	107.2	103.4
Salad dressing - Vinaigrette	119.1	116.7	111.6	110.0	109.9	105.4	104.7
Meat, poultry and fish - Viande, volaille et poisson	198.0	203.8	154.1	153.4	147.7	130.9	133.7
Meat - Viande	193.7	202.8	153.7	153.6	147.5	131.2	135.8
Beef - Boeuf	198.6	210.1	160.4	162.4	157.6	144.3	140.7
Sirloin steak - Bifteck de surlonge ..	180.0	196.7	152.8	161.1	152.4	143.4	139.7
Round steak - Bifteck dans la ronde ..	200.4	213.8	163.8	161.3	160.4	148.0	127.4
Prime rib roast - Rôti de côtes de choix	190.4	202.1	156.7	160.4	154.3	139.9	114.1
Blade roast - Rôti de palette	192.9	198.6	149.8	151.4	148.9	133.1	133.5
Stewing beef - Boeuf pour ragoût	196.3	200.2	157.8	159.9	157.3	145.9	142.1
Hamburg - Boeuf haché	231.9	240.7	178.9	178.2	170.4	148.5	144.8
Liver - Foie	182.9	186.2	138.8	140.7	134.8	119.1	132.3
Pork - Porc	184.3	194.3	143.9	141.7	132.4	109.6	128.1
Bacon(3) - Bacon(3)	173.5	188.4	134.8	128.7	115.8	88.8	118.8
Smoked ham(4) - Jambon fumé(4)	176.7	188.3	131.0	130.2	125.7	110.7	128.9
Cottage Roll - Roulé de haut d'épaule	196.1	196.8	142.6	140.0	135.0	110.9	127.0
Loin cuts - Coupes de longe	194.2	203.5	168.0	166.4	153.0	122.7	137.2
Shoulder cuts - Coupes d'épaule	192.9	198.6	133.8	136.1	128.0	102.4	120.5
Sausages - Saucisses	190.1	191.0	137.6	136.0	130.9	119.6	127.2
Other meat - Autres viandes	197.6	196.9	152.4	150.5	146.6	133.1	135.6
Wiensers - Saucisses de Francfort	181.0	181.6	129.0	128.5	127.8	119.0	121.5
Veal - Veau	236.9	237.3	202.5	197.8	189.9	165.0	162.6
Canned meat - Viandes en conserve	174.7	160.5	126.3	125.1	123.3	123.0	130.7
Poultry - Volaille	189.9	185.5	128.4	125.7	124.6	108.9	105.8
Chicken - Poulet	199.0	192.9	134.5	130.6	128.9	112.0	107.7
Turkey - Dinde	153.3	153.7	100.2	100.4	105.4	95.8	99.1
Fish - Poisson	257.3	236.9	193.5	188.7	180.5	157.0	150.6
Canned salmon - Saumon en boîte	227.5	197.9	153.2	150.4	149.0	143.0	144.1
Canned tuna(2) - Thon en boîte(2)	114.0	114.1
Eggs - Oeufs	156.2	159.9	104.7	106.5	94.7	87.3	99.0
Fruit and vegetables - Fruits et légumes ..	157.8	156.3	134.6	140.4	139.8	130.5	126.8
Fresh fruit - Fruits frais	175.2	186.0	139.3	150.5	143.2	132.7	116.0
Oranges - Oranges	125.4	116.6	108.5	107.5	104.4	111.9	102.5
Bananas - Bananes	89.1	86.8	83.0	81.5	79.3	76.2	85.7
Apples - Pommes	157.3	182.5	115.8	159.9	123.8	118.8	112.8
Grapefruit - Pamplemousses	204.3	205.1	197.6	174.6	153.4	154.8	140.9
Processed fruit - Fruits traités	146.3	144.7	130.0	129.2	127.6	122.7	125.5
Canned peaches - Pêches en conserve	158.0	157.4	142.1	141.2	140.8	135.5	139.0
Canned pears - Poires en conserve	134.9	134.0	124.7	124.1	124.5	120.7	123.7
Canned apple sauce(2) - Compote de pommes en conserve(2)	110.6	107.4
Canned apple juice(3) - Jus de pommes en conserve(3)	139.7	137.8	133.4	132.3	122.0	110.4	117.2
Canned orange juice - Jus d'oranges en conserve	112.4	112.3	115.4	115.4	115.0	108.9	108.6
Raisins - Raisins secs	233.4	227.2	158.8	156.6	153.4	150.2	153.0
Fresh vegetables - Légumes frais	151.3	139.2	133.2	139.8	147.0	135.0	138.4
Potatoes - Pommes de terre	182.3	151.7	122.7	127.0	128.2	114.7	134.0
Tomatoes - Tomates	152.7	131.0	143.1	143.2	167.5	162.2	143.7
Lettuce - Laitue	158.9	162.6	154.8	143.1	162.9	160.8	139.9
Carrots - Carottes	110.5	117.3	106.5	150.4	124.9	123.4	109.1
Celery - Céleri	133.8	150.7	130.5	130.5	164.2	141.6	150.3
Onions - Oignons	148.4	162.0	157.7	218.1	157.9	128.5	157.4
Cabbage - Choux	163.8	151.6	152.8	156.6	171.9	150.4	167.4
Turnips - Navets	151.3	177.0	157.6	182.3	154.2	125.1	171.0

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes for current year are subject to revision. Les données de l'année courante sont sujettes à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

TABLE 19. PRICE INDEX NUMBERS OF NON-RESIDENTIAL BUILDING MATERIALS(1)
 TABLEAU 19. INDICES DE PRIX DES MATÉRIAUX DE LA CONSTRUCTION NON-DOMICILIAIRE(1)

Principal components Principaux éléments		1961 = 100												Annual Année
		Month — Mois												
		J	F	M	A	M	J	J	A	S	O	N	D	Année

(1,2) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).

(2) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contract profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial de produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", séries de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

The concept of price change measured is net return to
ill.

Le concept de la mesure de la variation des prix se fonde
sur le revenu net à l'usine.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a
ries of input prices, inclusive of transportation and broker-
e fees, submitted by a wide variety of purchasers from
ected industries. Indexes for certain categories of metals
not be published because of the confidentiality of the data
der the Statistics Act.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à
partir d'une série de prix comprenant les frais de transport et de
dédouanement; ces données sont fournies par un large éventail de
clients de certaines industries. Confidentiels en vertu de la Loi sur
la statistique, les indices de certaines catégories de métaux ne
peuvent être publiés.

Canadian Farm Products Price Index 1935-39=100)

Prices of Western wheat used in the index prior to
August 1972, are buying prices of the Canadian Wheat Board
Nos. 1, 2 and 3 Northern at Thunder Bay. From August
1972 forward, prices used are for Nos. 1 and 2 C.W. Red
wheat at Thunder Bay. Prices for western oats and
barley are also supplied by the Wheat Board. Initial pay-
ments are first used in the index calculation and are revised
when further payments are announced.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix du blé canadien sur lesquels étaient basés le calcul
de l'indice avant le mois d'août 1972 étaient les prix payés par la
Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord
à Thunder Bay. A compter du 1er août 1972, les prix utilisés sont
ceux du blé rouge de printemps, nos 1 et 2 (14%) à Thunder Bay.
Pour calculer l'indice, on se sert d'abord des premiers paiements
et on les rectifie à mesure que d'autres paiements sont annoncés.

Final payments for the crop year August 1971 - July
1972 were announced on February 13, 1973 for wheat and
barley. No final payment was granted for barley.

Les prix définitifs pour la campagne allant d'août 1971 à
juillet 1972 ont été annoncés le 13 février 1973, en ce qui concerne
le blé et l'avoine. Il n'y a pas eu de dernier paiement pour
l'orge.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

30

$$\sqrt[30]{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}$$

30

$$\sqrt[30]{P^1_{t \ 35-39} \times P^2_{t \ 35-39} \times P^3_{t \ 35-39} \times \dots \times P^{30}_{t \ 35-39}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de définir exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a une tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

30

$$\sqrt[30]{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}$$

30

$$\sqrt[30]{P^1_{t \ 35-39} \times P^2_{t \ 35-39} \times P^3_{t \ 35-39} \times \dots \times P^{30}_{t \ 35-39}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to present usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

RETAIL PRICE INDEXES

The Consumer Price Index for Canada (1961 = 100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there is a continually measurable market price over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961 = 100 from 1949 = 100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949 = 100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961 = 100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise

INDICES DES PRIX DE DÉTAIL

L'indice des prix à la consommation pour le Canada (1961 = 100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949 = 100 à 1961 = 100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949 = 100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961 = 100) (Révision fondée sur les dépenses de 1967)*, numéros 62-539 au catalogue.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments

Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to selected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary series and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 no 7.

Consumer Price Indexes for Regional Cities (1961=100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on lower quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the city indexes for cities tended to underestimate somewhat rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified upon the cost of a fixed basket of goods and services representing the level of consumption of a representative family of families in the particular area specified.

In using the city indexes, it should be remembered that they do not in any way indicate whether price levels are higher or lower in one city than in another. Rather, they show, within each city, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services

l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961=100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent,

that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is $\$90.91 ((100.0/110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse du prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cent ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait compte les changements de prix à la consommation peut être calculée en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des salaires moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 au montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera $\$90.91 ((100.0/110.0) \times \$100)$, que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 10% rise in money wages $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is 129.8 $((146.23/142.0) \times 100)$. (The wage and the price index both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollars (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollars (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, wage data adjusted by the consumer price index (which assumes a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce wages to a constant dollar basis by using an index which assumes constant consumption patterns.

It should also be kept in mind that measures of changes in real earnings calculated from averages of gross wages may differ from changes in the purchasing power of

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est 129.8 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du

“take-home” pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971

revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations de niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes qui comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons de prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971 ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969 et avril 1972 de *Prix et indices des prix* (no 62-002 au catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées

price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. The data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time

Farm Input Price Indexes replace one of the two component indexes of the previously published series, Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replace the Composite Index Exclusive of Living Component from forward.

directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the *Globe and Mail* and the *Montreal Gazette*. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of price in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new subgroups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

Le bulletin hors série *Farm Input Price Indexes, 1961=100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (no 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961=100* (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placeur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture de la Bourse du jeudi indiqués dans le *Globe and Mail* et dans le *Montreal Gazette*. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base de 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par de nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâte et papiers, huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

For the list of stocks currently included in the Investment and Preferred Index, see *Prices and Price Indexes* February 1973.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price changes on the materials and labour inputs to construction, not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. Comparison of these series with the implicit price deflator (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1967 this sample has been replaced with prices from the ISPI (2). The latter are published monthly in Table 2 of this bulletin.

The Construction wage rate series is based on wage rates for material supplied by the Labour Standards Branch, Department of Labour, and relates to minimum wages paid on construction contracts for construction in a variety of trades and occupations.

Users are reminded that the indexes were arithmetically based to the year 1961 = 100 and therefore combining the components with the weights as shown will not provide a composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 construction trades in each of 14 cities in Canada. The average city indexes are prepared as well as a 14-city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of *Prices and Price Indexes* (1). This index is found in Table 20 of *Prices and Price Indexes* (62-002). Full trade detail, by city, is published in the

Annual National Product Division, Statistics Canada.
Industry Selling Price Indexes 1956-1968 Cat. 62-528.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de février 1973.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices—and—Price—Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1967, on a remplacé cet échantillon par les prix tirés du système I.P.V.I. (2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication

(1) Division du produit national brut, Statistique Canada.

(2) *Indices des prix de vente dans l'industrie, 1956-1968*, no 62-528 au catalogue.

quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously

Prix et indices des prix (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyennant les données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux de certains métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, exprimés en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Index* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 & 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou mettre à jour les prix de travaux de routes effectués précédemment.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

pleted roadwork, and as historical measurements of price
eds in highway construction.

The indexes do not necessarily reflect the price
ements of non-contract construction or maintenance.
x. The indexes are designed to measure price changes for
ed programme of highway construction, in each of the
n provinces. Because price levels in the time base-period
1) varied from province to province the indexes cannot
sed to compare price differences between provinces, but
to compare differences in the rate at which prices are
ging in the provinces.

Prices contained in the index are not for units of
ur and materials as is usually the case in construction
indexes but rather for units of construction work put in
such as an acre of clearing, a cubic yard of earth
vation or a ton of bituminous hot-mix paving. In addition
the index contains prices of some materials, such as
rt pipe, usually supplied to the contractor by the
way departments. Prices of highway construction work
annual weighted averages of bid prices of units of
ruction in groups of contracts awarded, classified by
etermining characteristics of the contracts and the bid
such as volume of the bid item, type of contract and
aphic location. Prices of material items of supply are
paid by government departments to suppliers.

Indexes of Electric Utility Construction

In electric utility terms, the index is designed to
le an estimate of the impact of price change on the cost
aterials, labour and equipment used in constructing and
ing electric utilities in a specified base period. The
provides an estimate of how much more, or less it
cost to reproduce the base-period programme of
uction in another period, using the same construction
logy as in the base period and assuming rates of profit
productivity in construction are the same in both
s.

As the market does not yield comparable selling
for such unique transactions as, for example, the sale
nmission line, it was not possible to produce an index
prices of completed structures. Completed structures
would be appropriate for users wishing either to
e reproduction costs or to deflate capital formation.
ch uses the indexes introduced in this publication have
short-comings. Nonetheless, they may be helpful for
urposes provided the users understand the deficiencies.
he reader is asked to make particular note of Section
Occasional Paper Catalogue 62-526 Price Indexes of
al Utility Construction - The Necessity for Comprom-
id Section XI, (of the same paper) Uses and Limita-
t addition, because particular construction projects are
the aggregate indexes will not likely be appropriate
ific projects since they relate to an average mix of
ls, labour and equipment derived from a variety of
in a specific base period. Thus, if the component
dexes and their weights included in the aggregate
resented herein are inappropriate for a particular
the user should consider selecting appropriate com-

ment, à estimer le coût de remplacement des travaux routiers
achevés précédemment et à mesurer chronologiquement l'évolu-
tion des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des
prix de la construction effectués hors marché ou des travaux
d'entretien; ils servent à mesurer les variations de prix pour un
programme déterminé de construction routière dans chacune des
sept provinces. Au cours de la période qui a servi de base (1961),
les niveaux de prix ont varié d'une province à l'autre; aussi, on ne
peut utiliser les indices pour comparer des différences de prix entre
les provinces mais on peut seulement les employer pour comparer
les différences entre taux de variation des prix dans les
provinces.

Les prix compris dans l'indice ne se rapportent pas aux
unités de travail ni de matériaux comme c'est habituellement le
cas dans l'indice des prix de la construction; ils se rapportent
plutôt aux unités de travail de construction effectué, comme le
défrichement d'une acre de terrain, l'excavation d'une verge cube
ou l'épandage à chaud d'une tonne de béton bitumineux. En
outre, l'indice comprend le prix de certain matériaux, par exem-
ple, les tuyaux de ponceau fournis habituellement à l'entrepreneur
par les ministères de la Voirie. Les prix des travaux de construction
routière sont des moyennes pondérées des prix de soumission pour
les unités de construction par groupe de marchés classés selon les
caractéristiques des marchés qui déterminent le prix et les élé-
ments d'offre tels que le volume de chaque poste, le type de
marché et la situation géographique. Les prix de matériaux fournis
sont les prix payés par les ministères au fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour
but de fournir une estimation des conséquences des variations de
prix sur le coût des matériaux, de la main-d'oeuvre et du matériel
utilisés dans la construction et l'équipement des services d'électri-
cité au cours d'une période de référence donnée. L'indice sert à
mesurer combien il faudrait payer en plus ou en moins pour
réaliser un programme de construction identique à celui de la
période de référence en utilisant les mêmes techniques de cons-
truction et en supposant que les taux de rentabilité et de producti-
vité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le
marché des prix de vente comparables pour des opérations de
caractère aussi unique, par exemple, que la vente d'une ligne de
transport d'énergie, Statistique Canada n'a pu établir un indice du
prix des installations en place. Un tel indice ne serait utile que si
l'on désirait obtenir une estimation des sommes qu'il faudrait
engager pour réaliser à nouveau un programme de construction
identique ou encore pour dégonfler une formation de capital. Les
indices publiés ici présentent en ce sens certaines lacunes. Ils
peuvent néanmoins servir à de telles fins pourvu que les utiliza-
teurs en comprennent les limites. Les lecteurs peuvent se rapporter
aux Sections III et XI de la publication *Price Indexes of Electrical
Utility Construction* (Statistique Canada, 62-526): "The Necessi-
ty for Compromise" et "Uses and Limitations". De plus, en raison
du caractère unique de chaque projet de construction, l'indice
synthétique ne pourra sans doute pas s'appliquer à un projet bien
précis car il porte justement sur une moyenne des matériaux, de la
main- d'oeuvre et du matériel utilisés dans la réalisation de
plusieurs projets au cours d'une période de référence donnée.
Ainsi, si les indices détaillés et les poids correspondants qui
composent les indices synthétiques présentés ici ne conviennent

ponent indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ce cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façons à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, lignes de transport d'énergie, de postes de transformation ou postes de manoeuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, compteurs, les transformateurs de distribution et les dépenses de main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manoeuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées de déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de l'enquête.

Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which is described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.

Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.

Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.

Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Indexes of Machinery and Equipment

In response to the need of users wishing either to get expenditure data of machinery and equipment for change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment and prices made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100. Most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were mostly supplied by major purchasers.

Conceptually purchasers' prices should be utilized in the indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices of Manufacturers' Goods collections from manufacturers most of whom reside in the United States.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

(a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.

(b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.

(c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.

(d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

- (1) Available in English only.
(2) A comprehensive statistical report on wholesale, farm consumer and security prices and price indexes covering intensively the period 1949-52 and more broadly earlier periods, in some cases from 1913; brief text is included.

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Statistics Canada, or to the Queen's Printer, Ottawa, Canada.

Le premier indice par industrie a été publié au milieu 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

NOTES ON PRICES AND PRICE INDEX NUMBERS

NOTES SUR LES PRIX ET SUR LES NOMBRE-INDICES DES PRIX

Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) moved 0.9% higher in November to 150.1 from the October index of 148.8. It was 15.7% higher than the November 1972 index of 129.7. Of the 103 industry indexes included in the total, 64 were higher, 13 declined and 26 were unchanged.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in the paper and allied products group (3.9%), particularly in the pulp and paper mills (4.9%). Increases also occurred in the primary metals group (1.7%) reflecting higher prices registered in the smelting and refining (1.7%) and iron and steel mills industries (1.4%). Price increases recorded in the petroleum refining industry (3.8%) were mainly responsible for advances in the petroleum and coal group (3.1%). Decreases in the food and beverage group (-0.7%) mainly in slaughtering and meal packing (-2.6%) and feed manufacturers (-3.8%), were the only significant declines in the total manufacturing.

Indice des prix de vente dans l'industrie: Fabrication (1961=100)

L'indice des prix de vente dans l'industrie (toutes les industries manufacturières) a progressé de 0.9%, en passant de 148.8 en octobre à 150.1 en novembre. Il était de 15.7% supérieur à l'indice de novembre 1972 (129.7). Sur les 103 indices composant le total, 64 on progressé, 13 on régressé et 26 n'ont pas varié.

Pour ce qui est de l'importance relative de chaque industrie au sein des industries manufacturières, les variations les plus appréciables ont été les augmentations observées dans le groupe du papier et des activités connexes (2.9%), particulièrement dans le cas des usines de pâtes et papiers (4.9%). On a aussi observé des augmentations dans le groupe de la première transformation des métaux (1.7%) à la suite d'une hausse des prix dans l'industrie de la fonte et l'affinage (1.7%) et dans celle du fer et de l'acier (1.4%). Les hausses des prix enregistrées dans l'industrie du raffinage du pétrole (3.8%) sont grandement responsables des hausses dans le groupe du pétrole et du charbon (3.1%). Les baisses du groupe aliments et boissons (-0.7%) surtout dans le cas de l'abattage et du conditionnement de la viande (-2.6%) et de la fabrication d'aliments pour animaux (-3.8%) sont les seules baisses d'importance observées dans toutes les industries manufacturières.

General Wholesale Price Index

The general wholesale price index rose 1.0% in November to 408.7 from the revised October index of 404.8. It was 26.5% higher than a year earlier. Seven of the eight major component groups were higher, while only one declined.

The non-metallic minerals group index moved up 3.5% to 274.3 from the revised October index in 265.1. This increase was due to higher prices for petroleum products. An advance of 2.2% to 370.0 from the revised October index of 362.2 in the iron products group index reflected price increases for castings and forgings, rolling mills products, and scrap iron and steel. Wood products group increased by 2.0% from the revised index of 505.9 to 515.9 on increases for newsprint, woodpulp, hardwoods, and furniture. Textile, chemical, non-ferrous metal and vegetable products indexes increased by 1.4%, 1.2%, 0.5% and 0.4% respectively.

The animal products group index declined 0.8% to 482.5 from the revised October index of 486.6 reflecting price declines in steers, fresh meats and hogs. The following table lists the Total General Wholesale Index and Component groupings for specified months:

Indice général des prix de gros

L'indice général des prix de gros a progressé de 1.0% passant de 404.8 (indice rectifié) en octobre à 408.7 en novembre ce qui représente une augmentation de 26.5% par rapport à celui de novembre 1972. Sept des huit groupes principaux ont monté alors qu'un seul a baissé.

L'indice du groupe des minéraux non métalliques s'est élevé de 3.5%, passant de 265.1 (indice rectifié) en octobre à 274.3. Cette augmentation est attribuable à la hausse des prix des produits du pétrole. La hausse de 2.2% de l'indice du groupe des produits du fer, qui est passé de 362.2 (indice rectifié) en octobre à 370.0 en novembre, est imputable à l'augmentation des prix des moulages et des pièces forgées, des produits des usines de laminage et des déchets de fer et de l'acier. L'indice du groupe des produits du bois a progressé de 2.0%, passant de 505.9 (indice rectifié) à 515.9, en raison de la hausse des prix du papier journal, de la pâte de bois, du bois dur et des meubles. Les indices des groupes de matières textiles, des produits chimiques, des métaux non ferreux et des produits d'origine végétale ont augmenté de 1.4%, 1.2%, 0.5% et 0.4% respectivement.

L'indice du groupe des produits d'origine animale a régressé de 0.8 %, passant de 486.6 (indice rectifié d'octobre) à 482.5, en raison de la baisse du prix des bouillons, des viandes fraîches et des porcs. Le tableau suivant présente l'indice total des prix de gros et les groupes pour les mois indiqués:

	Nov.*	Oct.*	Nov.	Oct.	% Change	
					Nov.	Nov.

*These indexes are preliminary.

Security Price Indexes (1961=100),

The investors index of common stock prices decreased 3% to 192.9 in November. Of the three major groups, industrials declined 2.7% to 209.0, utilities decreased 1.2% to 202.0 and finance 1.4% to 188.5. Within the thirteen industrial sub-groups, the largest decreases were registered in metal fabricating, down 9.0% to 205.4, and in pulp and paper down 7.0%, while foods showed an increase of 4.5%. In utilities, transportation declined 4.2% to 314.7, while gas distribution increased 4.0% to 160.9. A decline in the finance index resulted from banks down 0.6% to 222.6, while investment and loans showed a decrease of 3.6% to 135.3.

In the same period the index of mining stock prices showed a slight decline of 0.6% to 138.2; gold increased 6.7% to 173.1 and base metals decreased 5.6% to 120.3.

Of the two supplementary indexes, uranium advanced 10.7% to 299.8 and primary oils and gas gained 8.9% to 501.4.

The preferred stock index registered a decrease of 1% from 73.1 in October to 72.5 in November.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets declined 0.2% to 388.6 from the October index of 389.5. A decrease of 0.4% to 504.6 from 506.4 in the national products index reflected lower prices for wool and prices on both Eastern and Western markets, and for calves and lambs in the West. Higher prices were shown for fluid milk on both markets, and for lambs and calves in the West.

The field products index remained the same at 272.5. Price declines for barley, tobacco, and rye in the East, were offset by higher prices for potatoes on both markets and for hay and rye in the West.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 2.1% to 427.0 in November from the October index of 418.3. Prices were higher for seven commodities, lower for eight and unchanged for fifteen. Principal changes included increases in linseed oil, raw cotton, raw sugar, oats, tin, raw rubber and steel sheets while decreases were recorded for raw wool, linseed oil, spruce lumber, beef hides and steers.

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours de placement des actions ordinaires a baissé de 2.3% en novembre pour s'établir à 192.9. Parmi les trois grands groupes les valeurs industrielles ont fléchi de 2.7% pour se fixer à 209.0, les services publics ont baissé de 1.2% pour s'établir à 140.2 et les finances ont diminué de 1.4% pour s'inscrire à 188.5. Parmi les treize sous-groupes industriels les plus importantes diminutions ont été de 9.0% dans la fabrication des métaux (205.4) et de 7.0% dans les valeurs des pâtes et papiers; une hausse de 4.5% est à signaler dans le prix des actions des aliments. Dans le cas des services d'utilité publique, les transports ont baissé de 4.2% pour se stabiliser à 314.7 alors qu'un gain de 4.0% a été localisé dans les valeurs de la distribution du gaz (160.9). La diminution de l'indice des finances est attribuable à un fléchissement des banques de l'ordre de 0.6% pour s'établir à 222.6 tandis que les placements et les prêts accusent une perte de 3.6% pour se fixer à 135.3.

Au cours de la même période, l'indice du cours des titres miniers a légèrement diminué de 0.6% pour atteindre 138.2; les aurifères ont augmenté de 6.7% pour atteindre 173.1, et les métaux communs ont diminué de 5.6% pour se fixer à 120.3.

Pour ce qui est des deux indices supplémentaires, l'uranium a augmenté de 10.7% pour s'établir à 299.8; les valeurs du pétrole et les gaz primaires ont gagné 8.9% pour atteindre 501.4.

L'indice des actions privilégiées a baissé de 0.8%, tombant de 73.1 en octobre à 72.5 en novembre.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a régressé de 0.2% pour s'établir à 388.6 contre 389.5 en octobre. La diminution de 0.4% de l'indice des prix des produits d'origine animale, qui est passé de 506.4 à 504.6, s'explique par une baisse du prix de la laine et des bouvillons sur les marchés de l'Est et de l'Ouest et du prix des veaux et des agneaux dans l'Ouest. On a observé une hausse du prix du lait nature sur les deux marchés et des agneaux et des veaux dans l'Est.

L'indice des prix des produits de grande culture est demeuré stationnaire (272.5). La baisse du prix de l'orge, du tabac et du seigle dans l'Est a été compensée par la hausse du prix des pommes de terre sur les deux marchés, et du prix du lin, du foin et du seigle dans l'Ouest.

Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme une moyenne géométrique non pondérée, a progressé de 2.1% pour s'établir à 427.0 en novembre contre 418.3 en octobre. Les prix de sept marchandises ont monté, ceux de huit ont baissé et ceux de quinze sont demeurés inchangés. Les principales variations comprennent une hausse du prix de l'huile de lin, du coton brut, du sucre brut, de l'avoine, de l'étain, du caoutchouc brut et des feuillards d'acier, et une baisse du prix de la laine brute, de l'huile de coton, du bois d'épinette, des peaux de boeuf et des bouvillons.

Consumer Price Movements

The Consumer Price Index for Canada (1961=100) rose 0.8% to 155.5 in November from 154.3 in October as all main components moved up. Major contributors to the latest month's advance were higher prices for Food, Clothing and Housing which increased 1.2%, 1.1% and 0.8%, respectively. In addition, the component for Health and Personal Care rose 0.9%, while increases of 0.3% were registered for both the Transportation and the Recreation, Education and Reading elements. Tobacco and Alcohol moved up 0.2%. In the latest month the price level of All-Items other than Food was 0.6% higher. Between November 1972 and November 1973, the All-Items Index advanced 9.3%.

The Food index increased 1.2% to 171.8 in November from 169.7 in October as price levels for food consumed at home moved up 1.2%. Food eaten away from home also advanced 1.2% to reach a level 18.2% above that of a year ago. In the latest month, higher prices for beef, fresh vegetables and cereal and bakery products provided the main impetus to the latest monthly rise in the index for home-consumed food. Reversing a downward movement of a month earlier, the beef price index between October and November moved up 2.1% to a level 30% above twelve months previous. In contrast to the latest month's advance in beef prices, poultry prices rose only fractionally and pork quotations, on average, edged downward. Canned salmon prices continued to climb, advancing 3.6% to a level 52.4% above twelve months earlier. Fresh produce prices displayed mixed movements in the latest month. The index for fresh fruit edged down 0.7% to stand over 30% above its level of twelve months earlier; in contrast, fresh vegetable prices advanced 5.4% in the latest month but were less than 10% higher than in November 1972. Canned fruit and vegetables, on average, both registered a rise of over 3% between October and November. Although the price of bread was only fractionally higher in the latest month, the cereal and bakery products index moved up 2.0% because of marked price increases for cookies and cakes, macaroni, breakfast cereal and flour. Between October and November, the fats and oils index moved up 3.9%, as margarine prices climbed 6.5% to a level of 23% above twelve months earlier. For the second consecutive month a decline of 0.6% was registered in the index for dairy products, reflecting continued reductions in fresh milk and in powdered skim milk prices to which government subsidies are applicable. Between November 1972 and November 1973, the Food index moved up 18.4%, with the price of food for home consumption registering an 18.2% advance.

The Housing index rose 0.8% to 156.1 in November from 154.9 in October as a result of increases of 0.5% and 1.3% in the shelter and household operation components, respectively. Within shelter, the homeownership element moved up 0.7% because of increases in the indexes for mortgage interest, new houses and homeowner repairs; rents rose 0.2%. Among household operation items, fuel oil prices rose, on average, 3.5%, almost entirely as a result of increases in Eastern Ontario, Quebec and the Atlantic Provinces. In the latest twelve months, fuel oil prices have advanced over 23%. The furniture index moved up 1.7% in the latest month and

Mouvements des prix à la consommation

L'indice des prix à la consommation au Canada (1961=100) a progressé de 0.8%, passant de 154.3 en octobre à 155.5 en novembre, car tous les principaux éléments marquent une progression. Cette augmentation est imputable en grande partie à la hausse des prix des aliments, des vêtements et de l'habitation qui ont progressé de 1.2%, de 1.1% et de 0.8% respectivement. En plus, l'élément 'soins personnels et hygiène' s'est accru de 0.9%, alors que les éléments 'transports' et 'loisirs, formation et lecture' augmentaient chacun pour leur part de 0.3%. L'indice des tabacs et alcools s'est accru de 0.2%. Le mois dernier, l'indice de tous les produits, à l'exception des aliments, s'est accru de 0.6%. Entre novembre 1972 et novembre 1973, l'indice d'ensemble a augmenté de 9.3%.

L'indice des aliments a progressé de 1.2%, passant de 169.7 en octobre à 171.8 en novembre, car le prix des aliments consommés à la maison a augmenté de 1.2%. L'indice des prix à l'extérieur a lui aussi progressé de 1.2% pour dépasser 18.2% le niveau d'un an plus tôt. Le mois dernier, la hausse du prix du boeuf, des légumes frais et des céréales et produits de boulangerie a été la raison principale de l'augmentation observée de l'indice des aliments consommés à la maison. Après une baisse d'un mois précédent, l'indice du boeuf s'est accru de 2.1% d'octobre à novembre pour dépasser de 30% le niveau d'un an plus tôt. Contrairement au prix du boeuf le mois dernier, le prix de la volaille n'a que très peu augmenté, et le prix du porc a diminué. L'ensemble diminué légèrement. Le prix du saumon en conserve a continué de grimper, augmentant de 3.6% pour atteindre un niveau supérieur de 52.4% à celui d'un an plus tôt. Le prix des fruits et légumes frais s'est comporté de façon diverse au cours du mois observé. L'indice des fruits frais a baissé de 0.7%; il dépassait de plus de 30% celui d'un an plus tôt. Par contre, l'indice des légumes frais a progressé de 5.4% au cours du mois observé, et il ne dépassait que de moins de 10% le niveau d'un an plus tôt. Les fruits et légumes en conserve ont augmenté chacun en moyenne de plus de 3% d'octobre à novembre. Bien que le prix du pain ait augmenté que très légèrement le mois observé, l'indice des céréales et des produits de boulangerie a augmenté de 2.0% en raison de hausses notables des prix des biscuits secs et des gâteaux, des macaronis, des céréales de table et de la farine. Entre octobre et novembre, l'indice des huiles et corps gras a augmenté de 3.9%, car le prix de la margarine a progressé de 6.5% pour ainsi dépasser de 23% le niveau d'un an plus tôt. On a observé une diminution de 0.6% pour le deuxième mois consécutif dans l'indice des produits laitiers, par suite d'une nouvelle baisse du prix du lait frais et du lait écrémé en poudre qui faisaient l'objet de subventions gouvernementales. Entre novembre 1972 et novembre 1973, l'indice des aliments a augmenté de 18.4%, l'indice des aliments consommés à la maison augmentant pour sa part de 18.2%.

L'indice de l'habitation a progressé de 0.8%, passant de 154.9 en octobre à 156.1 en novembre, en raison d'une augmentation de 0.5% de l'indice du logement et de 1.3% de l'élément dépenses de ménage. Pour ce qui est du logement, l'élément propriété a augmenté de 0.7% en raison de la hausse des intérêts hypothécaires, des maisons neuves et des réparations. Les loyers ont augmenté de 0.2%. Pour ce qui est des dépenses de ménage, le prix du mazout a augmenté en moyenne de 3.5%, presque entièrement à cause des augmentations observées à l'Est de l'Ontario, au Québec et dans les provinces de l'Atlantique. Au cours des douze derniers mois, le prix du mazout a augmenté

ong other home furnishings, cookware, dishes, linen, iperies and floor coverings were higher in price. Household pply items, on average, edged up 0.1%. In the twelve nths to November 1973, the Housing index rose 6.8%.

The Clothing index advanced 1.1% to 143.8 in November from 142.3 in October thus registering a greater ease than is normal between these two months. Most or components contributed to this latest increase: footwear prices rose, on average, 2.7% reflecting general adices for all items surveyed. Increases in most clothing items sed the indexes for men's and women's wear to advance % and 0.6%, respectively, and that for children's wear to 1.2%. On the other hand, the piece goods index fell 0.2%. the twelve-month period ending November 1973, the thing index advanced 6.6%.

The Transportation index rose 0.3% to 140.1 in November from 139.7 in October as an increase in the private portation element outweighed a decline in the compot for public transportation. The main contributor to a % advance in private transportation was a 1.4% increase asoline prices which largely occurred in cities in Eastern ario, Quebec and the Atlantic Provinces. General price ances were recorded for motor oil. New car quotations marginally as the price level of 1974 models were, after stment for quality change, 0.1% higher, on average, than of the year-end 1973 models. The public transportation onent fell 0.3% as a decline in the index for plane fares ighted an increase in the train fares index. In the ve-month period ending November 1973, the Transpor- n index rose 5.3%.

The Health and Personal Care index rose 0.9% to 3 in November from 159.3 in October as a result of a rise in the personal care component. Personal care ces advanced 2.4% because of increases in men's haircut women's hairdressing charges in a number of centres, : quotations for toiletry items rose, on average, 0.5%. een November 1972 and November 1973, the Health Personal Care index advanced 6.1%.

The Recreation, Education and Reading index rise of to 148.3 in November from 147.8 in October was y attributable to an advance of 0.5% in the recreation nt as higher movie admission charges and increased equipment prices were recorded in a number of cities. eading index edged up 0.1% in response to higher aper subscription rates in Ottawa. In the latest twelve is, the Recreation, Education and Reading index rose

The Tobacco and Alcohol index rose 0.2% to 136.9 in nber from 136.6 in October mainly because of higher in a number of centres, for beer and liquor consumed ensed premises. Generally higher tobacco prices were

de plus de 23%. L'indice des meubles s'est accru de 1.7% le mois dernier; pour ce qui est des autres articles ménagers, le prix des ustensiles de cuisine, de la vaisselle, du linge de maison, des rideaux et des revêtements de sol a augmenté. Le prix des fournitures de ménage a marqué en moyenne une progression légère de 0.1%. De novembre 1972 à novembre 1973, l'indice de l'habitation a progressé de 6.8%.

L'indice de l'habillement a avancé de 1.1% pour atteindre 143.8 en novembre contre 142.3 en octobre, ce qui représente donc une augmentation plus forte que la normale entre ces deux mois. La plupart des principaux éléments ont contribué à cette progression: le prix des chaussures a monté en moyenne de 2.7%, traduisant une avance générale de tous les articles observés. L'augmentation du prix de la plupart des articles d'habillement a fait respectivement grimper les indices des vêtements pour hommes et pour femmes de 1.0% et de 0.6% et l'indice des vêtements pour enfants, de 1.2%. Par contre, l'indice du tissu à la verge a régressé de 0.2%. Au cours de la période de douze mois se terminant en novembre 1973, l'indice de l'habillement a progressé de 6.6%.

L'indice des transports s'est élevé de 0.3% pour atteindre 140.1 en novembre contre 139.7 en octobre, l'augmentation de l'indice des transports privés ayant eu plus de poids que la diminution de l'élément des transports publics. L'élément qui a le plus contribué à faire monter de 0.5% les transports privés est le prix de l'essence qui a augmenté de 1.4%, augmentation qui s'est surtout produite dans les villes de l'Est de l'Ontario, du Québec et des provinces de l'Atlantique. On a observé une avance générale du prix de l'huile à moteur. Les prix des voitures neuves ont monté très légèrement, étant donné que le niveau des prix des modèles 1974 a dépassé, après ajustement pour tenir compte de la variation de la qualité, de 0.1% en moyenne celui des modèles de la fin de l'année 1973. L'indice des transports publics a reculé de 0.3% du fait que la régression de l'indice des tarifs de transport par avion a eu plus de poids que la progression de l'indice des tarifs de transport ferroviaire. Au cours de la période de douze mois se terminant en novembre 1973, l'indice des transports a grimpé de 5.3%.

L'indice de l'hygiène et des soins personnels a monté de 0.9% pour atteindre 160.8 en novembre contre 159.3 en octobre, traduisant une hausse de 1.4% de l'indice des soins personnels. Les services de soin personnel ont progressé de 2.4% en raison de la hausse du prix des coupes de cheveux pour hommes et de la coiffure pour femmes dans un certain nombre de villes, tandis que le prix des articles de toilette a monté en moyenne de 0.5%. De novembre 1972 à novembre 1973, l'indice de l'hygiène et des soins personnels a avancé de 6.1%.

L'avance de 0.3% de l'indice des loisirs, de la formation et de la lecture, qui est passé de 147.8 en octobre à 148.3 en novembre, est en grande partie imputable à une hausse de 0.5% de l'indice des loisirs due à l'augmentation du prix des billets de cinéma et des articles de sport dans un certain nombre de villes. L'indice de la lecture a marqué une avance très légère de 0.1% en raison de la hausse des tarifs d'abonnement aux journaux à Ottawa. Au cours des douze derniers mois, l'indice des loisirs, de la formation et de la lecture a augmenté de 5.0%.

L'indice des tabacs et alcools a augmenté de 0.2%, passant de 136.6 en octobre à 136.9 en novembre, en raison principalement de la hausse enregistrée dans plusieurs centres du prix de la bière et des spiritueux consommés dans les débits. On a également

also recorded. In the latest twelve months, the Tobacco and Alcohol index advanced 2.9%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between October and November, the total goods index advanced 1.0% with the main impetus coming from non-durable goods which rose 1.0% mainly because of higher food, fuel oil and gasoline prices. The index for semi-durable goods rose 1.1% mainly in response to higher clothing quotations and the component for durable goods advanced 0.5% chiefly as a result of increased furniture prices. The services index rose 0.5% as increases were recorded in the shelter, health and recreation elements. In the twelve months to November 1973, the total goods index advanced 11.8% and that for services 6.3%.

enregistré une hausse générale du prix du tabac. L'indice de tabacs et alcools a augmenté de 2.9% au cours des douze derniers mois.

Les mouvements des prix à la consommation, reclassés par biens et services, donnent un autre aperçu de l'incidence des variations de prix. Entre octobre et novembre, l'indice d'ensemble des biens a avancé de 1.0%, en grande partie en raison de la hausse de 1.0% de l'indice des biens non durables provenant principalement d'une hausse du prix des aliments, du mazout et de l'essence. L'indice des biens semi-durables a avancé de 1.1% principalement en raison d'une hausse des prix de l'habillement et l'indice des biens durables a augmenté de 0.5% surtout à cause d'une augmentation du prix des meubles. L'avance de 0.5% de l'indice des services est imputable à la hausse observée des indices du logement, de l'hygiène et des loisirs. Au cours de la période de douze mois se terminant en novembre 1973, l'indice d'ensemble des biens a progressé de 11.8% et celui des services de 6.3%.

Industrial mines - Mines industrielles	147.3	153.3	118.8	122.4	- 3.9	- 2.9	+ 24.1
Foods - Aliments	150.2	143.7	146.0	148.1	+ 4.5	- 1.4	+ 2.1
Beverages - Boissons	260.7	271.2	251.6	246.4	- 3.9	+ 2.1	+ 3.1
Textiles and clothing - Textiles et vêtements	165.2	174.1	164.2	170.7	- 5.1	- 3.8	+ 0.1
Pulp and paper - Pâte et papier	157.1	168.9	102.4	99.4	- 7.0	+ 3.0	+ 53.1
Printing and publishing - Impression et édition	392.8	388.3	360.7	348.6	+ 1.2	+ 3.5	+ 8.1
Primary metals - Métaux primaires	136.0	141.0	107.7	112.0	- 3.5	- 3.8	+ 26.1
Metal fabricating - Fabrications des métaux	205.4	225.8	202.3	195.4	- 9.0	+ 3.5	+ 1.1
Non-metallic minerals - Minéraux non métalliques	181.2	181.5	173.2	174.8	- 0.2	- 0.9	+ 4.1
Petroleum - Pétrole	336.6	331.9	333.1	326.0	+ 1.4	+ 2.2	+ 1.1
Chemicals - Produits chimiques	118.4	122.6	108.1	109.2	- 3.4	- 1.0	+ 29.1
Construction - Construction	159.5	160.7	123.3	120.6	- 0.7	+ 2.2	+ 9.1
Retail trade - Commerce de détail	148.8	157.8	168.5	161.8	- 5.7	+ 4.1	- 11.1
Utilities - Total - Services publics	140.2	141.9	150.6	149.7	- 1.2	+ 0.6	- 6.1
Pipeline - Pipe-line	143.1	142.1	181.9	182.6	+ 0.7	- 0.4	- 21.1
Transportation - Transport	314.7	328.5	298.4	298.1	- 4.2	+ 0.1	+ 5.1
Telephone - Téléphone	83.6	84.6	89.6	86.3	- 1.2	+ 3.8	- 6.1
Electric power - Énergie électrique	113.4	114.7	119.0	117.0	- 1.1	+ 1.7	- 4.1
Gas distribution - Distribution du gaz	160.9	154.7	175.4	183.0	+ 4.0	- 4.2	- 8.1
Finance - Total - Finances	188.5	191.1	189.4	183.0	- 1.4	+ 3.5	- 0.1
Banks - Banques	222.6	224.0	217.2	209.0	- 0.6	+ 3.9	+ 2.1
Investment and loan - Placements et prêts	135.3	140.4	148.2	145.0	- 3.6	+ 2.2	- 8.1
<u>Mining - Actions minières</u>							
Mining Index - Total - Indices des prix des titres minières	138.2	139.0	104.5	109.0	- 0.6	- 4.1	+ 32.1
Gold - Or	173.1	162.3	110.1	114.6	+ 6.7	- 3.9	+ 57.1
Base metals - Métaux communs	120.3	127.5	102.4	106.9	- 5.6	- 4.2	+ 17.1
<u>Supplementary indexes - Indices supplémentaires</u>							
Uranium - L'uranium	299.8	270.9	163.8	175.6	+ 10.7	- 6.7	+ 83.1
Primary oils and gas - Pétrole et gaz primaires	501.4	460.4	543.2	543.0	+ 8.9	-	- 7.1

- (1) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 88.
- (2) Indexes for 1973 are subject to revision. - Les indices pour 1973 sont sujets à révision.
- (3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1973 are subject to revision. See notes page 89 for details of Western grain prices. - La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1973 sont sujets à révision. Voir les renvois de la page 89 pour les prix détaillés des grains de l'Ouest.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES
TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

1961 = 100														Annual Annuel
Industries and selected commodities(1)	Month - Mois													
Industrie et certains produits(1)	J	F	M	A	M	J	J	A	S	O	N	D		
Industry selling price index: manufacturing(6) - Indice des prix de vente dans l'industrie: industries manufactu- rières(6)	1969 114.5	115.0	115.6	115.9	116.3	116.7	116.4	116.6	116.8	117.2	117.2	118.1	116.3	
	1970 119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.9	118.8	119.1	
	1971 119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6	
	1972 124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4	
	1973 133.0	134.5	136.5	138.0	139.4	141.0	142.8	147.8	147.7	148.8	150.1			

- (1) Indexes for 1972 and 1973 are subject to revision. - Les indices pour 1972 et 1973 sont sujets à révision.
(2) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - A compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.
(3) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

- (4) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
(5) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
(6) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

ALL-ITEMS Consumer Price Index Converted to 1949=100 - November 1973 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Novembre 1973 200.9

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

TABLE 9. Consumer Price Indexes for Canada - Main Groups and Selected Components and Items(1)
TABLEAU 9. Indices des prix à la consommation, Canada - Groupes principaux, éléments et articles choisis(1)
(1961=100)

	Nov. 1973	Oct. 1973	Nov. 1972	Oct. 1972	1972	1971	1970
	Nov.	Oct.	Nov.	Oct.			
All-items - Indice d'ensemble	155.5	154.3	142.3	142.0	139.8	133.4	129.7
Food - Aliments	171.8	169.7	145.1	145.3	141.4	131.4	130.0
Food for home consumption - Aliments consommés à la maison	166.8	164.9	141.1	141.3	137.5	127.4	126.8

Shortening - Graisse végétale	139.3	136.6	119.6	122.8	121.8	118.7	114.1
Salad/cooking oil(2) - Huile à frire ou de table(2)	109.3	107.2
Salad dressing - Vinaigrette	122.2	119.1	111.2	111.6	109.9	105.4	104.7
Meat, poultry and fish - Viande, volaille et poisson	200.2	198.0	152.8	154.1	147.7	130.9	133.7
Meat - Viande	195.9	193.7	151.6	153.7	147.5	131.2	135.8
Beef - Boeuf	202.7	198.6	155.8	160.4	157.6	144.3	140.7
Sirloin steak - Bifteck de surlonge ..	183.2	180.0	144.4	152.8	152.4	143.4	139.7
Round steak - Bifteck dans la ronde ..	204.3	200.4	159.9	163.8	160.4	148.0	127.4
Prime rib roast - Rôti de côtes de choix	188.3	190.4	152.2	156.7	154.3	139.9	114.1
Blade roast - Rôti de palette	195.4	192.9	146.4	149.8	148.9	133.1	133.5
Stewing beef - Boeuf pour ragout	200.6	196.3	156.3	157.8	157.3	145.9	142.1
Hamburg - Boeuf haché	241.5	231.9	178.2	178.9	170.4	148.5	144.8
Liver - Foie	182.7	182.9	138.0	138.8	134.8	119.1	132.3
Pork - Porc	184.0	184.3	144.3	143.9	132.4	109.6	128.1
Bacon(3) - Bacon(3)	178.9	173.5	135.4	134.8	115.8	88.8	118.8
Smoked ham(4) - Jambon fumé(4)	178.5	176.7	133.8	131.0	125.7	110.7	128.9
Cottage Roll - Roulé de haut d'épaule	194.2	196.1	144.9	142.6	135.0	110.9	127.0
Loin cuts - Coupes de longe	188.4	194.2	165.6	168.0	153.0	122.7	137.2
Shoulder cuts - Coupes d'épaule	191.2	192.9	135.3	133.8	128.0	102.4	120.5
Sausages - Saucisses	188.4	190.1	137.9	137.6	130.9	119.6	127.2
Other meat - Autres viandes	198.9	197.6	152.7	152.4	146.6	133.1	135.6
Wieners - Saucisses de Francfort	180.0	181.0	129.7	129.0	127.8	119.0	121.5
Veal - Veau	243.1	236.9	203.6	202.5	189.9	165.0	162.6
Canned meat - Viandes en conserve	183.6	174.7	127.7	126.3	123.3	123.0	130.7
Poultry - Volaille	190.4	189.9	130.5	128.4	124.6	108.9	105.8
Chicken - Poulet	193.0	199.0	134.8	134.5	128.9	112.0	107.7
Turkey - Dinde	170.3	153.3	112.0	100.2	105.4	95.8	99.1
Fish - Poisson	262.4	257.3	195.4	193.5	180.5	157.0	150.6
Canned salmon - Saumon en boîte	235.6	227.5	154.6	153.2	149.0	143.0	144.1
Canned tuna(2) - Thon en boîte(2)	114.0	114.0
Eggs - Oeufs	155.1	156.2	100.7	104.7	94.7	87.3	99.0
Fruit and vegetables - Fruits et légumes ..	161.8	157.8	137.0	134.6	139.8	130.5	126.8
Fresh fruit - Fruits frais	174.0	175.2	132.9	139.3	143.2	132.7	116.0
Oranges - Oranges	128.5	125.4	106.8	108.5	104.4	111.9	102.5
Bananas - Bananes	75.9	89.1	78.3	83.0	79.3	76.2	85.7
Apples - Pommes	167.3	157.3	109.4	115.8	123.8	118.8	112.8
Grapefruit - Pamplemousses	140.3	204.3	133.2	197.6	153.4	154.8	140.9
Processed fruit - Fruits traités	150.8	146.3	130.6	130.0	127.6	122.7	125.5
Canned peaches - Pêches en conserve	159.4	158.0	143.1	142.1	140.8	135.5	139.0
Canned pears - Poires en conserve	137.0	134.9	124.7	124.7	124.5	120.7	123.7
Canned apple sauce(2) - Compote de pommes en conserve(2)	117.9	110.6
Canned apple juice(3) - Jus de pommes en conserve(3)	156.5	139.7	131.2	133.4	122.0	110.4	117.2
Canned orange juice - Jus d'oranges en conserve	113.0	112.4	115.0	115.4	115.0	108.9	108.6
Raisins - Raisins secs	232.5	233.4	162.7	158.8	153.4	150.2	153.0
Fresh vegetables - Légumes frais	159.4	151.3	145.6	133.2	147.0	135.0	138.4
Potatoes - Pommes de terre	183.0	182.3	140.6	122.7	128.2	114.7	134.0
Tomatoes - Tomates	180.7	152.7	173.0	143.1	167.5	162.2	143.7
Lettuce - Laitue	163.1	158.9	157.1	154.8	162.9	160.8	149.9
Carrots - Carottes	109.5	110.5	106.0	106.5	124.9	123.4	109.1
Celery - Céleri	148.7	133.8	150.2	130.5	164.2	141.6	150.3
Onions - Oignons	148.5	148.4	165.0	157.7	157.9	128.5	157.4
Cabbage - Choux	141.7	163.8	152.0	152.8	171.9	150.4	167.4
Turnips - Navets	153.0	151.3	155.7	157.6	154.2	125.1	171.0

Transportation services - Transports	182.2	182.4	176.8	177.0	174.8	168.1	160.0

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

Déc.										

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

Déc.								

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

Déc.								

- (1,2) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
- (2) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractor profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.
- (3) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (4) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (5) Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

(1) Indexes for 1972 and 1973 are subject to revision. - Les indices pour 1972 et 1973 sont sujets à révision.

* Not included in the Forestry machinery and equipment, East of the Rockies, composite index. - Non inclus dans l'indice synthétique de la machinerie et matériel forestiers à l'est des Rocheuses.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

The concept of price change measured is net return to
II.

Le concept de la mesure de la variation des prix se fonde
sur le revenu net à l'usine.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a
series of input prices, inclusive of transportation and broker-
age fees, submitted by a wide variety of purchasers from
selected industries. Indexes for certain categories of metals
cannot be published because of the confidentiality of the data
under the Statistics Act.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à
partir d'une série de prix comprenant les frais de transport et de
dédouanement; ces données sont fournies par un large éventail de
clients de certaines industries. Confidentiels en vertu de la Loi sur
la statistique, les indices de certaines catégories de métaux ne
peuvent être publiés.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western grains used in the index are Cana-
dian Wheat Board buying prices for the grades listed below.
Initial payments are first used in the index calculation and are
revised as further payments are announced.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix des céréales de l'Ouest figurant dans l'indice
représentent les prix à l'acheteur de la Commission canadienne du
blé pour les catégories énumérées ci dessous. Les paiements
initiaux servent d'abord au calcul de l'indice et sont ensuite révisés
lorsque d'autres paiements sont annoncés.

Final payments for the crop year August 1972 - July
1973 are announced on November 6, 1973 for wheat, oats
and barley.

Les prix définitifs pour la campagne allant d'août 1972 à
juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui
concerne le blé, l'avoine et l'orge.

used in original indexes from Aug. 1972 to July 1973. - Utilisé dans les premiers indices d'août 1972 jusqu'en
juillet 1973.

incorporated retroactively in revised final indexes Aug. 1972 to July 1973. - Inclus rétroactivement dans les
indices finals révisés d'août 1972 à juillet 1973.

used in current indexes. - Utilisé dans les indices courants.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de définir exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, l'indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a une tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 du catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to present usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according

L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice, ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère

their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 no 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that they do not in any way indicate whether price levels are higher or lower in one city than in another. Rather, they measure, within each city, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Rising prices are associated with declining purchasing

power, more distinct or dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est

power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is \$90.91 ($(100.0/110.0) \times 100$), which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B

liée à la baisse du pouvoir d'achat de la monnaie, et la baisse de prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice de prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cent ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice de prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait compte les changements de prix à la consommation peut être calculée en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des salaires moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surestimer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surestimation peut être réduite en réduisant le chiffre de \$100 au montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91 ($(100.0/110.0) \times 100$), que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant q

isted figure of \$90.91. Assuming the week A average of .00 as an index equal to 100, the week B index becomes 13.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 10% rise in money wages $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is 129.8 $((146.23/142.0) \times 100)$. (The wage and the price index both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollars is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, wage data adjusted by the consumer price index (which is a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce wages to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of take-home pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real

la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est 129.8 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de

wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city,

la rémunération effective ne sert pas à mesurer les variations de niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

A l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes qui comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherches. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons de prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour des mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969 et avril 1972 de *Prix et indices des prix* (no 62-002 catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains de prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mou-

er the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, the Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replace the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and is

ments relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est

reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes*, 1961=100, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the *Globe and Mail* and the *Montreal Gazette*. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of price in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new subgroups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Investors index and Preferred Index, see *Prices and Price Indexes* for February 1973.

reprise dans *Prices and Price Indexes* de septembre 1971 (62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes*, 1961=100 (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour famille agricole des séries de 1935-39 par un équivalent à jour on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placement hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture à la Bourse du jeudi indiqués dans le *Globe and Mail* et dans le *Montreal Gazette*. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines matériel et matériaux de construction) ont été remplacés par quatre nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: minérales, boissons, textiles et habillement, pâte et papiers, huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de février 1973.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. Comparison of these series with the implicit price deflator (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1967 this sample has been replaced with prices from the ISPI (2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rates for material supplied by the Labour Standards Branch, Department of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining components with the weights as shown will not provide a composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Construction Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of *Prices and Price Indexes* (62-002). This index is found in Table 20 of *Prices and Price Indexes* (62-002). Full trade detail, by city, is published quarterly in the *Construction Price Statistics Service Bulletin*, (62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service*.

Gross National Product Division, Statistics Canada.

Industry Selling Price Indexes 1956-1968 Cat. 62-528.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices—and-Price-Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'œuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1967, on a remplacé cet échantillon par les prix tirés du système I.P.V.I. (2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication *Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agree-*

(1) Division du produit national brut, Statistique Canada.

(2) *Indices des prix de vente dans l'industrie, 1956-1968*, no 62-528 au catalogue.

provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

ment Survey Service de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyennant des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations des prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 & 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1^{er} avril 1968 au 31 mars 1969.

en provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as street pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by the determining characteristics of the contracts and the bid is such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are as paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and operating electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of prices of completed structures. Completed structures would be appropriate for users wishing either to deflate reproduction costs or to deflate capital formation. Such uses of the indexes introduced in this publication have specific short-comings. Nonetheless, they may be helpful for purposes provided the users understand the deficiencies. The reader is asked to make particular note of Section 6 of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are specific, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component indexes and their weights included in the aggregate index presented herein are inappropriate for a particular use, the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by using weights derived from the projects or assets to be indexed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale

in the seven provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62 = 526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de

representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

mesure et des conditions de vente valables pour les ventes grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, lignes de transport d'énergie, de postes de transformation ou de postes de manoeuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses de main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manoeuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité au public" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées de déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de l'enquête.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.

Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.

Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.

Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indexes of Machinery and Equipment

In response to the need of users wishing either to compare expenditure data of machinery and equipment for change or to make comparison of commodity prices, a system of machinery and equipment indexes is now under development for a number of years. This is a system of industry indexes relating to types of equipment and prices made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100. Most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were supplied by major purchasers.

Conceptually purchasers' prices should be utilized in the indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labor Statistics commodity indexes or Prices and Cost Collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labor Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre

commodity indexes which exclude adjustments for exchange duty and federal sales tax can also be provided on request.

d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Index: Manufacturing (1961 = 100)

The industry selling price index (Total Manufacturing) rose 1.0% in December to 151.7 from the November index of 150.2. It was 15.9% higher than the December 1972 index of 130.9. Of the 103 industry indexes included in the total, 68 were higher, 7 declined and 28 were unchanged.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in the foods and beverages group (0.9%), particularly in the sugar refineries (22.2%) and food manufacturers (4.6%). These increases were partially offset by a decrease in the slaughtering and meat packing industry (-2.5%). Price increases in the petroleum refining industry (4.9%) were mainly responsible for advances in the petroleum and coal group (4.9%). Increases were also recorded in the chemical and chemical products industries (3.0%) reflecting higher prices in the manufacturers of industrial chemicals group (4.9%) and manufacturers of plastics and synthetic resins (5.8%). Declines during the month were relatively insignificant.

NOTES SUR LES PRIX ET LES INDICES DES PRIX

Indice des prix de vente dans l'industrie: Industries manu- facturières (1961 = 100)

L'indice des prix de vente dans l'industrie pour l'ensemble des industries manufacturières a augmenté de 1.0%, passant de 150.2 en novembre à 151.7 en décembre. Il s'est accru de 15.9% par rapport à son niveau en décembre 1972 (130.9). Sur les 103 industries représentées, les indices de 68 d'entre elles ont augmenté, ceux de 7 autres ont baissé et ceux des 28 autres sont restés inchangés.

En ce qui concerne la contribution relative des indices à la variation globale de l'indice total de l'industrie manufacturière, les progressions les plus importantes ont été observées dans le groupe des aliments et boissons (0.9%), en particulier pour les raffineries de sucre (22.2%) et les fabricants d'aliments pour animaux (4.6%). Ces hausses ont été contrebalancées en partie par une baisse de 2.5% dans l'industrie de l'abattage et du conditionnement de la viande. Les augmentations des prix (4.9%) dans les raffineries de pétrole sont responsables en grande partie des hausses observées dans le groupe des produits du pétrole et du charbon (4.9%). On a aussi observé des hausses dans l'industrie chimique et les produits connexes (3.0%) en raison de l'augmentation des prix dans le groupe des fabricants de produits industriels chimiques (4.9%) et des fabricants de matières plastiques et de résines synthétiques (5.8%). Les baisses observées au cours du mois sont de peu d'importance.

General Wholesale Index (1935-39=100)

The general wholesale price index rose 0.8% in December to 412.0 from the revised November index of 408.9. It was 25.5% higher than the December 1972 index of 328.3. Five of the eight major group indexes were higher, while three declined.

The vegetable products group index moved up 2.2% in December to 423.3 from the revised November index of 414.0 on higher prices for sugar and its products, vegetable oil products, livestock and poultry feeds, rubber and its products, canned vegetables, miscellaneous products and canned fruits. An advance of 2.2% to 277.6 from the revised index of 271.7 in the chemical products group index reflected price increases for fertilizer materials and paint and paint materials. The iron products group index moved up 1.5% to 376.3 from the revised index of 370.9 on price increases for scrap iron and steel, hardware and rolling mill products. The non-metallic mineral products index rose to 277.9 from the revised index of 274.3. The textile products group index advanced to 391.5 from 386.5.

The non-ferrous metals products group decreased 0.9% to 354.1 from the revised November index of 357.2, reflecting declines in copper and its products. Minor declines were recorded in the other two major group indexes: Animal products to 479.8 from the revised index of 482.6 and Wood products to 515.2 from 515.9.

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a progressé de 0.8% passant de 408.9 (indice rectifié) en novembre à 412.0 en décembre. Il a augmenté de 25.5% par rapport à l'indice de décembre 1972 (328.3). Cinq des huit groupes principaux ont augmenté alors que trois autres ont diminué.

L'indice du groupe des produits d'origine végétale progressé de 2.2%, passant de 414.0 (indice rectifié) en novembre à 423.3 en décembre, à cause de la hausse des prix du sucre et de produits connexes, des produits d'huile végétale, des aliments pour bétail et volaille, du caoutchouc et des produits connexes, des légumes en conserve, des produits divers et des fruits en conserve. L'indice du groupe des produits chimiques a avancé de 2.2%, passant de 271.7 (indice rectifié) à 277.6; cette hausse est attribuable aux augmentations du prix des engrais simples et de peinture et des produits connexes. L'indice du groupe des produits du fer a progressé de 1.5%, passant de 370.9 (indice rectifié) à 376.3, en raison des augmentations du prix des débris de fer d'acier, de la quincaillerie et des produits de laminage. L'indice des minéraux non métalliques est passé de 274.3 (indice rectifié) à 277.9. L'indice des produits textiles est passé de 386.5 à 391.5.

L'indice des produits de métaux non-ferreux a diminué de 0.9%, passant de 357.2 (indice rectifié) en novembre à 354.1, en raison des baisses du prix du cuivre et de produits connexes. On a observé de légères baisses pour deux autres groupes principaux: les produits d'origine animale, passant de 482.6 (indice rectifié) à 479.8 et les produits du bois, passant de 515.9 à 515.2.

*These indexes are preliminary. - Ces indices sont provisoires.

Security Price Indexes (1961=100)

The investors' index of common stocks decreased 9.4% to 174.8 in December from 192.9 in November. All major groups registered a 8% decrease (at least) in December. Industrials went down 9.8% to 188.6, while utilities and finance both declined 8.2% to 128.7 and 173.1 respectively. A decrease was shown for all sub-groups of each of the major groups in December.

In the same time, the index of mining stock prices also declined by 1.8% to 135.7. An advance of 13.7% to 196.9 in November has been offset by a decline of 14% to 103.4 in base metals.

Of the two supplementary indexes, uranium decreased 4.8% to 285.3 and primary oils and gas declined 8.1% to 460.8.

The preferred stock index registered a 4.7% decrease to 69.1.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at term markets advanced 0.1% to 389.4 in December from the revised November index of 389.0. An increase of 0.7% to 390.3 from 272.5 in the field products index reflected higher prices for rye on both Eastern and Western markets and for wheat in the East and flax and hay in the West. Lower prices were shown for hay in the East.

The animal products index moved 0.2% lower to 504.5 from the revised November index of 505.5 on lower prices for hogs and steers on both Eastern and Western markets. Higher prices were shown for lambs, raw wool, and eggs on both markets, and for cheesemilk in the West.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 1.5% to 438.6 in December from the revised November index of 432.0. Prices were higher for ten commodities, lower for six and unchanged for fourteen. Principal changes included increases for tin, raw rubber, linseed oil, raw sugar, sisal, and lead, cottonseed oil and raw wool, while decreases were recorded for raw cotton, spruce lumber, oats, hogs and pigs.

Farm Input Price Index (1961=100) 4th Quarter 1973

The Farm Input Price Index for Canada increased 3.4% in the 4th quarter 1973, moving to 173.6 from a revised 3rd quarter level of 170.8. The Eastern index moved up to 173.6 from its revised 3rd quarter level of 180.0, an increase of 3.4%. The Western index rose 3.4% to 165.5 from 160.1.

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours des actions ordinaires a baissé de 9.4% passant de 192.9 en novembre à 174.8 en décembre. Chacun des grands groupes a enregistré une diminution d'au moins 8% en décembre: les valeurs industrielles ont baissé de 9.8% pour se fixer à 188.6, alors que les services publics et les finances ont tous deux diminué de 8.2% pour s'inscrire à 128.7 et 173.1 respectivement. Une diminution de tous les sous-groupes de chacun des grands groupes d'indices est à signaler pour décembre.

Au cours de la même période, l'indice des titres miniers a lui aussi diminué, de 1.8% pour se fixer à 135.7. Le gain de 13.7% enregistré dans les aurifères (196.9) est annulé par une perte de 14% (103.4) dans les métaux communs.

Pour ce qui est des deux indices supplémentaires on a noté une baisse de 4.8% de l'uranium à 285.3 tout comme une diminution de 8.1% du pétrole et du gaz primaires à 460.8.

L'indice des actions privilégiées a diminué de 4.7% à 69.1.

Indice des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 0.1% en décembre, passant de 389.0 (indice révisé) en novembre à 389.4. L'avance de 0.7% de l'indice des produits de grande culture, qui est passé de 272.5 à 274.3, est attribuable à une hausse du prix du seigle dans l'Est et dans l'Ouest, du maïs dans l'Est et de lin et du foin dans l'Ouest. On a observé une baisse du prix du foin dans l'Est.

L'indice des produits d'origine animale a régressé de 0.2%, passant de 505.5 (indice révisé) en novembre à 504.5, en raison d'une baisse du prix des cochons et des bouvillons sur les deux marchés. On a remarqué une hausse du prix des agneaux, de la laine brute, des veaux et des oeufs sur les deux marchés et du lait de fromagerie dans l'Est.

Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, a progressé de 1.5% pour passer de 432.0 (indice révisé) en novembre à 438.6 en décembre. Le prix de dix produits a monté, celui de six a baissé et celui de quatorze est demeuré stationnaire. Les principales variations comprennent une hausse du prix de l'étain, du caoutchouc brut, de l'huile de graine de lin, du sucre brut, du sisal, du plomb blanc, de l'huile de coton, et de la laine brute et une baisse du prix du coton brut, du bois d'épinette, de l'avoine, des cochons et des bouvillons.

Indices (1961=100) des prix des entrées dans l'agriculture, 4ième trimestre de 1973

L'indice canadien des prix des entrées dans l'agriculture a augmenté de 1.6% au cours du 4e trimestre de 1973 pour atteindre 173.6 contre un niveau rectifié de 170.8 au 3e trimestre. L'indice pour l'Est est passé de 180.0 (niveau rectifié du 3e trimestre) à 180.6, ce qui représente une augmentation de 0.3%. L'indice pour

The increase over the 4th quarter 1972 was 20.2% for Canada, 24.7% for the East, and 14.9% for the West.

Higher prices in both regions for labour, petroleum products, new machinery and motor vehicles, and small tools and supplies influenced the indexes upwards. Price increases in the East were offset by lower prices for prepared feeds and feeder cattle. In the West, feed prices did not decline, and the lower feeder cattle prices were not offsetting, so that the Western index showed more of an increase.

l'Ouest a grimpé de 160.1 à 165.5, soit une augmentation de 3.4%. L'augmentation par rapport au 4e trimestre de 1972 a été de 20.2% pour le Canada, de 24.7% dans l'Est et 14.9% dans l'Ouest.

Des prix plus élevés dans les deux régions pour la main-d'oeuvre, les produits pétroliers, les nouvelles machines et véhicules automobiles, et les petits outils et fournitures ont occasionné cette progression des indices. Les augmentations de prix dans l'Est ont été compensées par des prix moins élevés pour les aliments préparés et les bovins d'embouche. Dans l'Ouest, les prix des aliments pour animaux n'ont pas baissé et les prix moins élevés des bovins d'embouche n'ont pas eu d'exact compensateur, ce qui a produit une plus grande progression dans l'indice de l'Ouest.

The Consumer Price Index for Canada (1961=100) rose 0.6% to 156.4 in December from 155.5 in November. Higher prices for food away from home moved the Food index up 0.2%, while the level of prices for All-Items other than Food rose 0.6% with the main contributors being the Housing and Clothing components, both of which advanced 0.8%, and Transportation which rose 0.9%. The Health and Personal Care index went up 0.2% and no change was recorded in the components for Recreation, Education and Reading, and for Tobacco and Alcohol. Between December 1972 and December 1973, the All-Items Index advanced 1.1%.

The Food index rise of 0.2% to 172.1 in December from 171.8 in November was mainly attributable to a further 0.2% advance in the price of food outside the home; prices of food for home consumption were virtually unchanged, on average, over the month. Among home-consumed foods, higher price levels in the latest month for such categories as beef, processed vegetables and fruit, cereal and bakery products, and fats and oils were largely offset by lower levels for fresh produce, pork and poultry. The index for meat, poultry and fish fell 0.6% as poultry and pork prices went down, on average, 4.2% and 1.5%, respectively, thus outweighing an advance of 0.7% in the beef index. In the latest twelve months, the index for meat, poultry and fish climbed 29% with poultry advancing 39% beef over 28% and fish 27%. Egg prices, which had registered small decreases in each of the previous two months, rose 1.2% between November and December, to retail over 40% above their December 1972 level. In contrast to advances of 2.9% in the indexes for processed vegetables and fruit in the latest month, fish vegetable and fruit prices declined, on average, 2.1% and 1.0.7%, respectively. In the twelve months since December 1972 fresh fruit prices rose, on average, nearly 28% while fish vegetable prices were over 4% lower. Although bread and bakery products index rose 0.6% because of continued price increases for macaroni, breakfast cereal, cookies and cake. Poultry by an advance of almost 3.0% in margarine prices, the index for fats and oils rose 2.0% to stand over 18% above its level of a year earlier. The index for dairy products, which declined in the previous two months, edged up 0.2% between November and December when only the price of condensed skim milk moved downwards. Among other foods, price increases were recorded for most convenience food items, soft drinks, coffee and tea prices registered advances and rises were recorded for sugar, soup and honey. Between December 1972 and December 1973, the Food index moved up 17.0% while the price of food consumed at home rising 16.6% and for food away from home by 18.5%.

The Housing index rose 0.8% to 157.4 in December from 156.1 in November as a result of increases of 0.5% and 0.3% in the shelter and household operation components,

L'indice des prix à la consommation pour le Canada (1961=100) est passé de 155.5 en novembre à 156.4 en décembre, ce qui représente une progression de 0.6%. La hausse des prix des repas pris à l'extérieur a fait avancer l'indice de l'alimentation de 0.2%, tandis que le niveau des prix pour l'indice d'ensemble, à l'exception de l'alimentation, a augmenté de 0.6%, principalement en raison de l'accroissement de 0.8% des indices de l'habitation et de l'habillement et de 0.9% de l'indice des transports. L'indice des soins personnels et de l'hygiène a avancé de 0.2% et on n'a enregistré aucune modification de l'indice des loisirs, de la formation et de la lecture, de même que de celui des tabacs et alcools. Entre décembre 1972 et décembre 1973, l'indice d'ensemble a avancé de 1.1%.

La hausse de 0.2% de l'indice de l'alimentation, qui est passé de 171.8 en novembre à 172.1 en décembre, s'explique surtout par une autre avance de 1.2% de l'indice des repas pris à l'extérieur; de leur côté, les prix des aliments consommés à la maison sont demeurés, en moyenne, pratiquement inchangés au cours du mois. Dans le cas des aliments consommés à la maison, on a observé au cours du mois de décembre que l'augmentation du prix de certains éléments comme le boeuf, les légumes et fruits traités, les céréales et produits de boulangerie et les huiles et corps gras a été largement compensée par la baisse du prix des produits frais, du porc et de la volaille. L'indice de la viande, de la volaille et du poisson a régressé de 0.6% en raison de la diminution du prix de la volaille et du porc qui s'est établi en moyenne à 4.2% et à 1.5% respectivement, ce qui a eu plus de poids que l'avance de 0.7% de l'indice du prix du boeuf. Au cours des douze derniers mois, l'indice de la viande, de la volaille et du poisson a grimpé de plus de 29%, la volaille progressant de 39%, le boeuf de plus de 28% et le porc de 27%. Les prix des oeufs, qui ont accusé de légères diminutions au cours des deux derniers mois, ont monté de 1.2% de novembre à décembre pour s'établir à un niveau au détail de 40% supérieur à celui de décembre 1972. En contrepartie des avances de 2.9% observées dans le cas des indices des légumes et fruits traités au cours du mois de décembre, les prix des légumes et fruits frais ont baissé en moyenne de 2.1% et de 0.7% respectivement. De décembre 1972 à décembre 1973, les prix des fruits frais ont monté de près de 28% en moyenne tandis que les prix des légumes frais ont baissé de plus de 4%. Bien que le prix du pain ait baissé légèrement au cours du mois observé, l'indice des céréales et des produits de boulangerie a progressé de 0.6% en raison de la poursuite de la montée du prix des macaronis, des céréales de table, des biscuits secs et des gâteaux. A la suite d'une hausse de près de 3.0% du prix de la margarine, l'indice des huiles et corps gras a progressé de 2.0% pour s'établir à un niveau de 18% plus élevé que celui d'il y a un an. L'indice du prix des produits laitiers, qui avait régressé au cours des deux derniers mois, a monté de 0.2% de novembre à décembre, seul le prix du lait écrémé en poudre ayant accusé une baisse. Parmi les autres aliments, on a observé une hausse du prix de la plupart des plats cuisinés, des boissons gazeuses, du café et du thé, ainsi que du sucre, de la soupe et du miel. De décembre 1972 à décembre 1973, l'indice de l'alimentation a grimpé de 17.0%, le prix des aliments consommés à la maison ayant augmenté de 16.6% et celui des repas pris à l'extérieur, de 18.5%.

L'indice de l'habitation a progressé de 0.8% pour passer de 156.1 en novembre à 157.4 en décembre traduisant des augmentations de 0.5% et de 1.3% de l'élément logement et des dépenses de

respectively. Within shelter, the homeownership element moved up 0.7% and rents rose 0.2%. Among household operation items, fuel oil prices rose, on average, 7.0% as a result of increases in Eastern Ontario, Quebec and the Atlantic Provinces and rates for domestic gas increased in some centres. Appliance prices advanced 1.6% as general increases were recorded on most items surveyed, and furniture quotations rose, on average, 0.6%. Among other home furnishings, linens, draperies, floor coverings and dishes were higher in price. The household supplies index advanced, on average, 0.9%. In the twelve months to December 1973, the Housing index increased 7.2%.

The Clothing index advanced 0.8% to 144.9 in December from 143.8 in November as all major index components registered increases. Charges for clothing services advanced 3.4% due to generally higher prices for laundry, dry cleaning and shoe repairs. Rises of 0.4% and 0.5% in the women's and men's wear indexes, respectively, resulted from advances in most items surveyed. The index for children's clothing advanced 0.9% but still stood fractionally below its level of a year earlier. Footwear prices rose, on average, 0.6% as all items surveyed recorded increases, and the piece goods index advanced 0.2%. In the twelve months to December 1973, the Clothing index rose 7.3%.

The Transportation index rose 0.9% to 141.3 in December from 140.1 in November as increases were recorded in both the private and the public transportation components. Within the former, an advance of 1.4% in the automobile operation and maintenance index was mainly attributable to a 2.7% increase in gasoline prices, which largely occurred in cities in Eastern Ontario, Quebec and the Atlantic Provinces, and to widespread price advances for motor oil. In the latest twelve months, gasoline prices have risen over 19%. The increase in the public transportation component in the latest month was mainly caused by advances in the train and plane fares indexes. In the twelve-month period ending December 1973, the Transportation index rose 5.9%.

The Health and Personal Care index rose 0.2% to 161.1 in December from 160.8 in November, as increases of 0.2% were recorded in both the health and personal care components. Scattered price increases for both prescribed and non-prescribed medicines were responsible for the rise in the health care index. Amongst items of personal care, toiletries edged up, and higher charges for men's haircuts were reported in some outlets. In the latest twelve months, the Health and Personal Care index rose 6.1%.

In December 1973, the Recreation, Education and Reading index was unchanged from its November level of 148.3. Higher prices in a number of cities for stereos, television sets and phonograph records were offset by seasonal reductions in motel rates in some centres. Between December 1972 and December 1973, the Recreation, Education and Reading index advanced 4.9%.

ménage respectivement. Pour ce qui est de l'élément logement, les frais de propriété ont grimpé de 0.7% et les frais de loyer de 0.2%. Dans le cas des dépenses de ménage, le prix du mazout a monté en moyenne de 7.0% en raison des augmentations observées dans l'Est de l'Ontario, au Québec et dans les provinces de l'Atlantique. De son côté, le prix du gaz ménager a monté dans certaines villes. Le prix des appareils ménagers a augmenté de 1.6% à la suite de hausses générales observées dans le cas de la plupart des articles enquêtés; le prix des meubles a monté en moyenne de 0.6%. Pour ce qui est des autres articles d'ameublement, le prix du linge, maison, des rideaux, des revêtements de sol et de la vaisselle s'est élevé. L'indice des fournitures de ménage a avancé en moyenne 0.9%. Par rapport à celui de décembre 1972, l'indice de l'habitation a augmenté de 7.2%.

L'indice de l'habillement s'est accru de 0.8%, passant de 143.8 en novembre à 144.9 en décembre, alors que tous les éléments principaux de l'indice ont augmenté. Les frais de services vestimentaires ont augmenté de 3.4% à la suite d'une hausse générale des prix de blanchissage, de nettoyage à sec et de réparations de chaussures. Les indices des vêtements pour hommes et des vêtements pour femmes ont progressé respectivement de 0.4% et de 0.5%, en raison des hausses observées pour la plupart des articles de l'enquête. L'indice des vêtements pour enfants a avancé de 0.9% mais est encore légèrement inférieur à celui de la période correspondante de 1972. Tandis qu'on observait une hausse de l'indice de l'habillement, le prix des chaussures a augmenté en moyenne de 0.6%, et l'indice du tissu a légèrement progressé de 0.2%. De décembre 1972 à décembre 1973, l'indice de l'habillement a progressé de 7.3%.

L'indice des transports a augmenté de 0.9%, passant de 140.1 en novembre à 141.3 en décembre, à la suite de la hausse des éléments transports publics et privés. Dans le cas des transports privés, la progression de 1.4% de l'indice d'utilisation et de frais d'automobile est principalement attribuable à une hausse de 2.7% du prix de l'essence que l'on a observée dans les villes de l'Ontario, du Québec et des provinces de l'Atlantique et à des augmentations générales du prix de l'huile à moteur. Au cours des douze derniers mois, le prix de l'essence a augmenté de plus de 19%. La hausse des frais des transports publics au cours du dernier mois est surtout attribuable à la progression des indices des tarifs ferroviaires et aériens. De décembre 1972 à décembre 1973, l'indice des transports a progressé de 5.9%.

L'indice des soins personnels et de l'hygiène s'est accru de 0.2%, passant de 160.8 en novembre à 161.1 en décembre, en raison d'une augmentation de 0.2% observée pour les deux composantes de cet indice. La progression de l'indice de l'hygiène est attribuable aux augmentations dispersées des prix des médicaments prescrits et non prescrits. Parmi les articles de soins personnels, le prix des articles de toilette a augmenté et on a observé dans quelques points de vente, une hausse des prix de la coupe de cheveux pour hommes. Au cours des douze derniers mois, l'indice des soins personnels et de l'hygiène a augmenté de 6.1%.

En décembre 1973, l'indice des loisirs, de la formation et de la lecture est resté inchangé par rapport au niveau atteint en novembre soit 148.3. Dans quelques villes la hausse des prix des téléviseurs, des ensembles stéréo et des disques de phonographe a été contrebalancée par des réductions saisonnières des frais de motel dans certains centres. De décembre 1972 à décembre 1973, l'indice des loisirs, de la formation et de la lecture a augmenté de 4.9%.

In December 1973, the Tobacco and Alcohol index was unchanged from its November level of 136.9 and stood 1.6% above its level of December 1972.

Consumer price movements, reclassified by goods and services offer another view of the incidence of price change. Between November and December, the total goods index advanced 0.6% with the main impetus coming from non-durable goods which rose 0.6% mainly because of higher prices for fuel oil, gasoline and food eaten away from home. The index for semi-durable goods rose 0.5% mainly in response to higher clothing and household furnishings quotations and the component for durable goods advanced 0.4% chiefly as a result of increased appliance, furniture, stereo and television prices. The services index rose 0.5% as increases were recorded in the shelter, health and transportation payments. In the twelve months to December 1973, the total goods index advanced 11.6% and that for services 6.2%.

En décembre 1973, l'indice des tabacs et alcools n'a pas varié par rapport au niveau atteint en novembre, soit 136.9 et est supérieur de 1.6% à celui de décembre 1972.

Si l'on classe les articles qui entrent dans l'indice des prix à la consommation par biens et services, on obtient une image différente du mouvement des prix à la consommation. De novembre à décembre, l'indice d'ensemble des biens a progressé de 0.6% en raison surtout de l'augmentation de 0.6% observée dans les biens non durables, hausse principalement attribuable à la majoration des prix de mazout, de l'essence et des repas pris à l'extérieur. L'indice des biens semi-durables a augmenté de 0.5%, en raison principalement de la hausse du prix de l'habillement et des meubles; les biens durables ont augmenté de 0.4% à la suite surtout de la hausse des prix des appareils ménagers, des meubles, des ensembles stéréo et des téléviseurs. L'indice des services a progressé de 0.5% en raison des augmentations observées dans le cas des indices du logement, de l'hygiène et des transports. Au cours des douze mois précédant décembre 1973, l'indice d'ensemble des biens a progressé de 11.6% et celui des services, de 6.2%.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES
TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

1961 = 100

Industries and selected commodities(1) Industrie et certains produits(1)	Month - Mois												Annual Annuel
	J	F	M	A	M	J	J	A	S	O	N	D	Annuel
Industry selling price index manufacturing(6) - Indice des prix de vente dans l'industrie: industries manufactu- rières(6):	1969 114.5	115.0	115.6	115.9	116.3	116.7	116.4	116.6	116.8	117.2	117.2	118.1	116.3
	1970 119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.9	118.8	119.1
	1971 119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6
	1972 124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4
	1973 133.0	134.5	136.5	138.0	139.4	141.0	142.8	147.8	147.7	148.8	150.2	151.7	

- (1) Indexes for 1972 and 1973 are subject to revision. - Les indices pour 1972 et 1973 sont sujets à révision
(2) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - À compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88
(3) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels:

	Old Series Ancienne série	New series Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

- (4) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
(5) Motor gasoline prices are 'list' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
(6) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons interindustrielles. Pour toute explication voir page 88.

ALL-ITEMS Consumer Price Index Converted to 1949=100 - December 1973 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Décembre 1973 202.1

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

TABLE 9. Consumer Price Indexes for Canada - Main Groups and Selected Components and Items(1)

TABLEAU 9. Indices des prix à la consommation, Canada - Groupes principaux, éléments et articles choisis(1)
(1961=100)

	Dec. 1973 Déc.	Nov. 1973 Nov.	Dec. 1972 Déc.	Nov. 1972 Nov.	1973	1972	1971
All-items - Indice d'ensemble	156.4	155.5	143.3	142.3	150.4	139.8	133.4
Food - Aliments	172.1	171.8	147.1	145.1	162.0	141.4	131.4

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes for current year are subject to revision. Les données de l'année courante sont sujettes à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

Oct.	182.5	267.2	223.4		161.3	254.9	203.3	
Nov.	184.1	270.4	225.7		164.2	257.3	206.0	
Dec.	185.5	272.3	227.3		166.7	259.3	208.3	

- (1,2) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
- (2) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contract profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.
- (3) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (4) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (5) Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

TABLE 25. Base-Weighted Highway, Construction Price Indexes, All-items and Major Components, Quebec, Annually, 1965 Forward(1)

TABLEAU 25. Indices pondérés des prix de la construction routière; indice synthétique et indices des principaux éléments; Québec, annuels depuis 1965(1)

1964=100

	Year(2) - Année(2)							
	1965	1966	1967	1968	1969	1970	1971	1972
All-items - Indice synthétique	96.6	103.8	101.5	101.1	107.2	109.5	125.6	134.6
Grading - Nivellement	93.2	102.0	96.4	98.5	105.0	105.2	124.7	137.1
Granular base courses - Couches de base granuleuses	97.6	105.0	105.9	100.9	109.2	113.5	127.2	129.4
Surface courses - Couches de surface	102.5	106.3	107.5	106.4	109.8	114.4	126.0	134.6

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

The concept of price change measured is net return to

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

ase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a of input prices, inclusive of transportation and broker- es, submitted by a wide variety of purchasers from d industries. Indexes for certain categories of metals be published because of the confidentiality of the data the Statistics Act.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

ian Farm Products Price Index (1935-39=100)

Prices of Western grains used in the index are Cana- Wheat Board buying prices for the grades listed below. Payments are first used in the index calculation and are as further payments are announced.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix des céréales de l'Ouest figurant dans l'indice représentent les prix à l'acheteur de la Commission canadienne du blé pour les catégories énumérées ci dessous. Les paiements initiaux servent d'abord au calcul de l'indice et sont ensuite révisés lorsque d'autres paiements sont annoncés.

Final payments for the crop year August 1972 — July ere announced on November 6, 1973 for wheat, oats rley.

Les prix définitifs pour la campagne allant d'août 1972 à juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui concerne le blé, l'avoine et l'orge.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{P^1_{t \ 35-39} \times P^2_{t \ 35-39} \times P^3_{t \ 35-39} \times \dots \times P^{30}_{t \ 35-39}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des classes par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de définir exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, l'indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{P^1_{t \ 35-39} \times P^2_{t \ 35-39} \times P^3_{t \ 35-39} \times \dots \times P^{30}_{t \ 35-39}}$$

The selection of materials for pricing relates to groups as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to the use of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

The Consumer Price Index for Canada (1961 = 100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961 = 100 from 1949 = 100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949 = 100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961 = 100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according

L'indice des prix à la consommation pour le Canada (1961 = 100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantités constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949 = 100 à 1961 = 100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépenses des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949 = 100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961 = 100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère

their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary series and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 no. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that they do not in any way indicate whether price levels are higher or lower in one city than in another. Rather, they measure, within each city, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing

power, and falling prices are associated with increasing purchasing power. The category of goods presents three sub-categories (durable goods, semi-durable goods, non-durable goods) determined in function of the average useful lifetime. On the other hand, services are divided into several functional categories.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est

power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is $\$90.91 ((100.0/110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B

liée à la baisse du pouvoir d'achat de la monnaie, et la baisse de prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cent ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (Tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait compte les changements de prix à la consommation peut calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans la proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des salaires moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 au montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera $\$90.91 ((100.0/110.0) \times \$100)$, que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que

isted figure of \$90.91. Assuming the week A average of 00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 10% rise in money wages $((\$100.00-\$80.00/\$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is 102.98 $((146.23/142.0) \times 100)$. (The wage and the price index both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollars (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollars (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, wage data adjusted by the consumer price index (which is a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce wages to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of changes in real earnings calculated from averages of gross wages may differ from changes in the purchasing power of the "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real

la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00-\$80.00/\$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est 102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de

wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city,

la rémunération effective ne sert pas à mesurer les variations de consommation des salariés ou de leurs familles, plutôt à montrer les tendances du pouvoir d'achat des salariés rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes qui comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherches. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons de prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour des mesures de prix de détail tirées précédemment jusqu'à mai 1971 ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969 et avril 1972 de *Prix et indices des prix* (no 62-002, catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains de prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et assortissant autant que possible les points de vente au détail de même type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mo-

for the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the years covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-annual retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. The data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Farm Input Price Indexes replace one of the two component indexes of the previously published series, the Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replace the Composite Index Exclusive of Living Component from the forward.

A detailed description of concepts, methods and data is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and is

ments relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est

reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes*, 1961=100, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the *Globe and Mail* and the *Montreal Gazette*. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of price in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new subgroups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Investors index and Preferred Index, see *Prices and Price Indexes* for February 1973.

reprise dans *Prices and Price Indexes* de septembre 1971 (62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes*, 1961=100 (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour famille agricole des séries de 1935-39 par un équivalent à jour on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un investisseur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture à la Bourse du jeudi indiqués dans le *Globe and Mail* et dans le *Montreal Gazette*. Pour les actions privilégiées, les prix sont des moyennes pondérées mensuelles. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines, matériel et matériaux de construction) ont été remplacés par de nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: miniers, industrielles, boissons, textiles et habillement, pâte et papiers, huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe des banques et de l'ancien indice supplémentaire investissements étrangers. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de février 1973.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as factors of price change for the output of building construction of buildings in place. Users are therefore warned to use caution in making use of the series, for this purpose. Comparison of these series with the implicit price deflator (providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the weighted input indexes for changes in productivity and margins.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1967 this sample has been replaced with prices from the ISPI (1)(2). The latter are published monthly in Table 2 of this bulletin.

The Construction wage rate series is based on wage rates for material supplied by the Labour Standards Branch, of Labour, and relates to minimum wages paid on construction contracts for construction in a variety of trades and occupations.

Users are reminded that the indexes were arithmetically based to the year 1961 = 100 and therefore combining components with the weights as shown will not provide a composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 construction trades in each of 14 cities in Canada. Detailed average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of *Prices and Price Indexes* (2). This index is found in Table 20 of *Prices and Price Indexes* (62-002). Full trade detail, by city, is published quarterly in the *Construction Price Statistics Service Bulletin*, (62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service*.

Statistics Canada, National Product Division.

Industry Selling Price Indexes 1956-1968 Cat. 62-528.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices—and—Price—Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement(1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtes a donné les prix pour l'indice. En 1967, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.(2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication *Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agree-*

(1) Division du produit national brut, Statistique Canada.

(2) *Indices des prix de vente dans l'industrie, 1956-1968, no 62-528 au catalogue.*

provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction* in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

ment *Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires, publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyennant des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les salaires moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction Canada* (no 62-520 au catalogue de Statistique Canada). L'ensemble ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

ven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as sewer pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for other purposes provided the users understand the deficiencies. As the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be indexed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale

sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par le ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de

representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

mesure et des conditions de vente valables pour les ventes grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, lignes de transport d'énergie, de postes de transformation ou postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses de main-d'œuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cet enquête.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant numéro 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices are then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Revision collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre

commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.
